1 Plan -

2.

Amount of Estimate Rs. 1930-

This sluice is to be built at the site where there was an original sluice. After the latter was damaged, a division wall was built along the tunnel of Porupunatham head sluice, when this also was damaged it was proposed to build a partition wall in the rear cistern of the above sluice. But, as this system could not work efficiently as the bed of the Velligudi channel is 3 feet higher than that of the Porupunatham channel, under instructions from the Division officer in his No 2556 of 17-9-95, it is proposed to build a separate sluice for the irrigation of the high level lands under the Velligudi channel. The villagers have given their consent to contribute one half of the amount.

This estimate provides for all the works required and as the construction of the sluice is necessary and urgent, early sanction for the same is awaited.
