FURTHER PAPERS.

W.
Extract from report by Mr. G. O. Dunn, Superintendent Practical
training on the Royal Indian Engineering College students
who closed there practical course on 31st August 1898.

Messrs. and R.F.Stoney
have enjoyed exceptional opportunities for acquiring
practical knowledge under Mr.J.Mansergh, on the Birmingham
Corporation Waterworks in the Elan Valley, Radnorshire,
where vast works, comprising a large range of engineering,
are in active progress. They have had valuable object lessons
in high class masonry and cement concrete work, in the
working and handling of heavy and intricate stones, the
handling and laying of large pipes, the erection of gantrys,
temporary bridges, &c. They have assisted constantly in
measuring up work of different classes, in leveling, lining
out, &c.

Mr. Stoney was for a fortnight at the beginning of his course at Messrs. Stothert and Pitts' workshops at Bath, where he was able to make some acquaintance with foundry work.

All four officers have visited the Merthyr Tydvil Waterworks Extension, and have been able to note there the use of hydraulic lime in place of cement in a reservoir dam; the Lynton and Barnstaple Railway, the Lancashire, Derbyshire and East Coast Railway works, the Kendal Corporation Waterworks Extension, and the Vyrnwy Reservoir.
