From J. E. Paul Esquire.
Executive Engineer,
South Arcot Division.

To
The Collector of
South Arcot.

Sir,

With reference to your No. 217/ver dated 11th February 1898, I have the honour to state that I have not as yet received any orders of Government that the clearance of Wallajah channel, Minor Irrigation Work, Public Works Department, No. 245 is, hence forward, to be carried out in this Department, instead of by "kudimaramut" as heretofore.

2. I note, however, that in the Proceedings of the Board of Revenue, that you have kindly sent me, the Chief Engineer for Irrigation states that "the maintenance of channel and masonry works is properly a charge on Public Works Department funds".

3. I have therefore ordered that the necessary estimates be prepared.

4. I should however state that before work can be done at the head of the ea channel, a considerable area of land will have to be acquired for depositing silt, and of itself the preparation of the estimate for this work, which has been neglected for years, will take a considerable time.

5. I should say that the channel would not be put in efficient order certainly for two years from now.

6. It remains therefore for you to consider from what time the cess should be charged, if the Board of Revenue's

proposal is approved by Government.

I have &c,

(Signed) J. E. Paul,

Executive Engineer.

PROCEEDINGS OF THE MADRAS GOVERNMENT.

READ the following paper :—

Proceedings of the Board of Revenue (Revenue Settlement, Land Records and Agriculture) No. 2733 Mis, dated 22nd April 1898 on the following letter from the Collector of South Arcot, No. 542/ver dated 18th April 1898 :-

I have the honour to report that, on receipt of Board's Proceedings No. 676 Misc, dated 1st February 1898 communicating G. O. sanctioning the collection of cess for the maintenance of the Wallajah channel in the Cuddalore Taluk, I asked the Executive Engineer to put the channel and masonry works in order at once to admit of the collection of the cess from the current fasli. From his reply (copy enclosed) it would appear that no work is likely to be done this fasli, as estimates have to be prepared and land acquired at the head of the channel for the deposit of silt. I have the honour therefore to recommend that the collection of cess should be deferred till next fasli.

--------:0:--------

Resolution.

Submitted to Government with reference to its order, No. 440 dated 27th January 1898.

2. In the circumstances reported by the Collector in his letter read above, the Board supports his recommendation

that the collection of cess should be deferred till next fasli.

NOVEMBER. 1

Irrigation cess.—Submitting, for the orders of Government, Revenue Department papers regarding the levy of voluntary — of 6 annas an acre for the conservancy of the Wallajah channel, in the Cuddalore taluk, South Arcot district.

PROCEEDINGS OF THE BOARD OF REVENUE

(REVENUE SETTLEMENT, LAND RECORDS AND AGRICULTURE).

READ—again the following Proceedings of the Board of Revenue (R.S., L.R. and Agri.), Mis. No. 255, dated 19th January 1895 :—

Read—the following letter from A. E. CASTLESTUART STUART, Esq., Acting Collector of South Arcot, to the Secretary to the Commissioners of Land Revenue, dated Camp, Tirukkóyilur, 9th December 1894, Ref. on Regr. No. 5218-Eng. :—

I have the honour to submit, for the sanction of the Board, the following proposal for the future conservancy of the channel called the "Wallajah channel" which takes off from the Penniar and feeds thirteen villages in the Cuddalore taluk. The total length of the channel is 10½ miles. It is provided with complete masonry works, most of which require ordinary repairs except two which require reconstruction having been seriously damaged by the floods of 1884. Estimates for these have been prepared by the Public Works Department, and are ready.

2. In October 1892, a mahazar was received from the ryots of the villages of Melgoveraput, Kizhagoveraput and Tiruvádi which are at the tail end of the channel offering to pay a cess of 4 annas an acre in commutation of the common labour required of them to clear the channel. Mr. Hammick inspected the channel on the spot and considered it would be hopeless to expect that the channel would ever be cleared by communal labour, seeing that in spite of urgent requisitions to that end, the villagers had done nothing. He accordingly proposed the levy of a voluntary cess of 6 annas an acre and enquired if all the ryots of the thirteen villages were willing to pay it. The Divisional-officer has now reported that they are all willing to pay and have expressed their willingness in writing.

3. The channel irrigates 2,000·13 acres of wet, 221·74 acres of dry and 128·66 acres under Puvasi in all the villages aggregating 2,350·53 acres. The Public Works Department estimate the cost of opening the channel at Rs. 900 and its maintenance in future years at Rs. 500 and for establishment at Rs. 360. At 6 annas an acre, the revenue would be Rs. 881 which would be quite sufficient in all ordinary years.

4. I request therefore that sanction may be obtained for the levy of the cess.

Reference on the above, dated 22nd December 1894.

Forwarded to the Chief Engineer for Irrigation for favour of remarks.

2. The Collector is requested to report details of the establishment proposed.

(Signed) P. RAJARATNA MUDALIAR,
Secretary.

To the Chief Engineer for Irrigation.
" Collector of South Arcot.

READ—the following letter from A. E. CASTLESTUART STUART, Esq., Acting Collector of South Arcot, to the Secretary to the Commissioner of Revenue Settlement and Director of the Department of Land Records and Agricuture, dated Cuddalore, 10th January 1895, Ref. on Regr. No. 5218-Eng. :—1

In reply to paragraph 2 of the Board's Ref. on Genl.Regr. No. 8148, dated 22nd December 1894, I have the honour to give below the details of establishment proposed in this office Ref. on No. 5218-Eng., dated 9th December 1894 :—

	RS.
1. Maistry on Rs. 15 per mensem for a year	180
3. Lascars on Rs. 5 each per mensem for a year	180
Total	360

Resolution—Mis. No. 255, dated 19th January 1895.

Recorded, pending receipt of reply from the Chief Engineer to the Ref. on Genl-Regr. No. 8148 of 1894.

(True Copies and Extract.)

(Signed) P. RAJARATNA MUDALIAR,
Secretary.

To the Chief Engineer for Irrigation.
" Collector of South Arcot.

READ—the following letter from J. S. WILSON, Esq., Executive Engineer, South Arcot Division, to the Superintending Engineer, V Circle, dated 1st February 1896, No. 85-S.E. :—

With reference to your No. V/3-S.A., dated 8th January 1895, calling for a report on the Wallajah channel and enquiring whether it is an Imperial work, I have the honour to report as follows :—

"The channel is an Imperial one, No. 245 in the list and takes off from the right bank of the Penniar in the village of Ulunthampett. It is rather more than 10 miles long and irrigates according to the Collector's statement a total area of 2,350·3 acres in thirteen villages. The masonry works of the channel have been occasionally repaired by the Public Works Department and one estimate amounting to Rs. 1,400 was sanctioned and worked out in 1884–85; this was for silt clearance and repairs to masonry works. The Public Works Department has never except on this occasion undertaken the annual silt clearance. It is now proposed by the Collector to accept an offer of the villagers to pay an annual cess as a commutation of the kudimaramut labour required from them and an opinion has been asked for as to the annual cost of maintenance including establishment. The channel has hitherto been badly conserved and no establishment is at present maintained by the department for its conservancy or the regulation of water.

"As regards the cost of maintenance, the Sub-divisional officer reports that, as the deep bed of the river is at a distance from the head of the channel, a spring channel would have to be cut every year to bring water from the river bed to the channel. The Sub-divisional officer does not state what would be the probable length of such a channel and in any case the cutting of such channels is not an operation which the Public Works Department in this division is in the habit of undertaking; it would, I think, be more cheaply done by the ryots or the Minor Irrigation Department. It might cost annually about Rs. 150—200. As regards the maintenance of the channel itself, the removal of silt, repairs to masonry works, &c., this work could be done annually by the Public Works Department, the cost might be put at Rs. 300, at Rs. 30 per mile which should be sufficient after the channel had once been put in thoroughly good order to keep it up in an efficient manner.

"As regards the establishment required, as it is not, I presume, intended that Public Works Department should undertake the actual distribution of the water, the Public Works Department establishment would be such as would be sufficient to give a sufficient staff to work the head-sluice and to carry out the ordinary mile coolie's work. For this, one head cooly on Rs. 8 and 3 mile coolies on Rs. 5 should be sufficient. Their pay would come to Rs. 276. As regards water distribution, this could best be done by kavalgars acting through the village monigars under the Minor Irrigation Department. Their number might be that suggested by the Sub-divisional officer, viz., 4, at Rs. 5 per mensem, their pay would amount to Rs. 240. The annual amount needed therefore for the general upkeep and regulation of the channel will, according to the above data, amount to—

	RS.
(1) Spring channel	200
(2) Maintenance of channel and masonry works	300
(3) Public Works Department petty establishment	276
(4) Minor Irrigation coolies for distribution of water	240
Total ...	1,016

an amount which is Rs. 135 above the amount specified by the Collector as the probable amount of the special cess.

"I have given orders for an investigation of the state and capabilities of the channel and am of opinion that if the channel is put into proper order and carefully maintianed, an increase in the irrigated area is probable, in which case the excess on the cost of maintenance over the amount of the cess will be reduced. I do not think, however, that the excess need stand in the way of the arrangement as so far very little of the attention which a channel of such importance deserves has been paid to it and the entertainment of maintenance establishment need not I think be considered as debitable to the amount of the voluntary cess. The complete estimate for the channel will be submitted when received."

Endorsement by the Superintending Engineer, V Circle, No. 311-E.I., dated 10th December 1896.

"To the Chief Engineer for Irrigation, with reference to his No. V/3-S.A., dated 8th January 1895."

Endorsement by the Chief Engineer for Irrigation, No. 74-M., dated 2nd March 1897.

Copy of endorsement No. 311-E.I., dated 10th December 1896, from the Superintending Engineer, V Circle, is forwarded to the Board of Revenue for information in reply to its reference, dated 22nd December 1894, on Genl. Regr. No. 8148 of 1894.

2. The maintenance of channel and masonry works is properly a charge on Public Works Department funds. The cess of 6 annas should be accepted and anything more required provided from ordinary funds.

Reference on the above, dated 23rd March 1897.

Before obtaining the sanction of Government to the levy of the cess referred to, the Board desires to have a report from the Collector as to his view on the suggestions of the Executive Engineer, in regard to the establishment required under the Public Works Department and the Revenue Department.

(Signed) R. V. SRINIVASIAR,
Secretary.

To the Collector of South Arcot.

READ—the following letter from A. E. CASTLESTUART STUART, Esq., I.C.S., F.G.S., F.L.S., F.R.G.S., Collector of South Arcot, to the Secretary to the Commissioner of Revenue Settlement and Director of the Department of Land Records and Agriculture, dated Cuddalore, 4th July 1897, Ref. on Regr. No. 5218-Eng. :—

In reply to the Board's Ref. on Genl. Regr. No. 1734, dated 23rd March 1897, I have the honour to state that the establishment proposed by the Executive Engineer of this district for the maintenance of the Wallajah channel is sufficient.

RESOLUTION—No. 731, dated 30th November 1897.

The papers read above will be submitted for the orders of Government.

2. In his letter disposed of in B.P., No. 255, dated 19th January 1895, read again above, the Collector of South Arcot requested sanction for the levy of a voluntary irrigation cess of 6 annas an acre, in commutation of the customary labour required of the ryots of thirteen villages in the Cuddalore taluk, irrigated by the Wallajah channel, which takes off from the Penniar. It was reported that the total length of the channel was 10½ miles and that it was provided with complete masonry works, most of which required ordinary repairs except two which required reconstruction. The proposal to levy the cess emanated from Mr. Hammick, the former Collector of the District, who, on receipt of a petition in October 1892 from the ryots of three villages at the tail end of the channel offering to pay a cess of 4 annas an acre in commutation of the labour required of them to clear the channel, inspected the spot and coming to the conclusion that it would be hopeless to expect the work to be done by communal labour, proposed the imposition of a voluntary cess of 6 annas an acre and directed inquiry to be made as to whether all the ryots of the thirteen villages were willing to pay it. The ryots of all the villages having expressed their willingness in writing to pay the cess at the rate proposed, sanction for the imposition of the cess was asked for by the Collector as stated above. It was also reported by the Collector that the Public Works Department estimated the cost of clearing the channel at Rs. 900, its annual maintenance at Rs. 500 and the establishment required at Rs. 360, and that the cess which would amount to Rs. 881 on the aggregate acreage of 2350·53, would be quite sufficient in all ordinary years. The Collector's letter was forwarded to the Chief Engineer for Irrigation for favour of remarks, and that officer having apparently referred the letter to the Executive Engineer, the latter officer reported that, as the deep bed of the river was at a distance from the head of the channel, a spring channel would have to be cut every year at a cost of Rs. 150—200 to bring water from the river bed to the channel; that the maintenance of the channel estimated to cost Rs. 300 a year could be attended to by the Public Works Department; that an establishment consisting of a head cooly on Rs. 8 and 3 mile coolies on Rs. 5 each costing in all Rs. 276 per annum would be necessary under the Public Works Department, and that another consisting of 4 coolies at Rs. 5 per mensem for distribution of water costing Rs. 240 per annum would be required under the Revenue Department. The Chief Engineer forwards the Executive Engineer's report in reply to the Board's Reference and,

in doing so, observes that the maintenance of the channel and masonry works is properly a charge on the Public Works Department funds and that the cess of 6 annas should be accepted, any amount required in addition being provided from ordinary funds. The Collector, to whom the proposal regarding establishment was referred for report, states that the establishment as proposed by the Executive Engineer is sufficient.

3. In these circumstances, the Board supports the Collector's proposal that sanction may be accorded for the acceptance, in and from the current fasli, of a voluntary cess of 6 annas an acre in lieu of the customary labour which the thirteen villages referred to are bound to contribute.

Es.

The Wallajah channel S. Arcot Dt. is a P.W.D. Minor work No. 245 — Under existing arrangements Silt clearance and ordinary maintenance are carried out by the villagers — The channel irrigates over 2000 acres of wet land — The Collector made a proposal to the Board to levy a cess of 6 as per acre which the villagers are willing to pay if the Clearance & maintenance are taken over by the P.W.D. The Collector estes. the revenue from the cess at Rs 881 —

The proposal having been submitted to Es. for remarks the Ex. Eng. S. Arcot has reported that the cost of maintenance would be

1	Spring channel	200
2	Maintce. of channel & masonry works	300
3.	Petty establt.	276
4.	M. D. coolies for distribution of water	240
		1016.

The Ex. Eng. supports the Collector's proposal saying that he anticipates an increase in the irrigated area if the channel be properly maintained.

2. The maintce. of chl. & masonry works is ~~not~~ properly a charge on ~~State~~ D.P.W. funds. The cess of 6 as. should be accepted and anything [illegible]

the honor to submit
nction of the Board
wing proposal for the
servancy of the Channel
"Wallajah Channel"
kes off from the Pen-
feeds thirteen villages
ddalore Taluk. The
gth of the Channel
les. It is provided with
masonry works, most
require ordinary repairs
o, which require re-
n having been seriously
by the floods of 1884.
for these have been
prepared

prepared by the D.P.W. and are ready.

2. In October 1892, a mahazar was received from the ryots of the villages of Melganarapet, Kizhagonerapet and Tiruvadi which are at the tail-end of the channel offering to pay a cess of 4 annas an acre in commutation of the common labour required of them to clear the channel. Mr. Hannick inspected the channel on the spot and considered it would be hopeless to expect that the channel would ever be cleared by communal labour, seeing that in spite of urgent requisitions to that end, the villagers had done nothing. He accordingly proposed the levy of a voluntary cess of 6 annas an acre and enquired if all the ryots of the thirteen villages were willing to pay it. The Divisional Officer has now reported that they were all willing willing to pay and have expressed their willingness in writing.

3. The channel irrigates 2000.13 acres of wet, 221.74 acres of dry and 128.66 acres under Pavasi in all the villages aggregating 2350.53 acres. The D.P.W. estimate the cost of opening the channel at 900 Rs and its maintenance in future years at Rs 500 and for establishment at Rs 360. At 6 annas an acre, the revenue would be Rs 881 which would be quite sufficient in all ordinary years.

4. I request therefore that sanction may be obtained for the levy of the cess.

Reference thereon dated 22nd December 189

Forwarded to the Chief Engineer for Irrigation for favour of remarks.

2. The Collector is requested to report details of the establishment proposed.

No. 85 SE.

South Arcot Divisional Office
Camp Chidambaram
Dated 1st February 1896.

From J. S. Welson Esquire
Executive Engineer,
South Arcot Division

To The Superintending Engineer
5th Circle

Sir,

With reference to your No. $\frac{V}{3\ Sa}$ dated 8th January 1895 calling for a report on the Wallajah Channel and enquiring whether it is an imperial work, I have the honour to report as follows:-

The Channel is an imperial one No 245 in the list, and takes off from the Right bank of the Ponniar in the village of Ulunthampet. It is rather more than 10 miles long and irrigates according to the Collector's Statement a total area of 2350.3 acres in 13 villages. The masonry works of the Channel have been occasionally repaired by the D.P.W. and one estimate amounting to Rs 1,400 was sanctioned and worked out in 1883/85; this was for Silt clearance and repairs to masonry works.

The D.P.W. has never except on this occasion undertaken the annual silt clearance. It is now proposed by the Collector to accept an offer of the villagers to pay an annual cess as "a" commutation of the Kudimaramath labor required from them and an opinion has been asked for as to the annual cost of maintenance including establishment. The Channel has hitherto been badly conserved and no establishment is at present maintained by the Department for its conservancy or the regulation of water.

As regards the cost of maintenance, the Sub Divisional officer reports that as the deep bed of the river is at a distance from the head of the Channel, a spring channel would have to be cut every year to bring water from the river bed to the Channel. The Sub divisional officer does not state what would be the probable length of such a Channel and in any case the cutting of such Channels is not an operation which the D.P.W in this Division is in the habit of undertaking; it would, I think, be more cheaply done by the ryots or the Minor Irrigation Department. It might cost annually about Rs 150-200. As regards the maintenance of the Channel itself — the removal of silt, repairs to masonry works &c., this work could be done annually by the D.P.W. The cost might be put at Rs 300 at Rs 30 per mile which should be sufficient after the Channel had once been put in thoroughly good order, to keep it up in an efficient manner.

As regards the establishment required, as it is not I presume intended that D.P.W should undertake the actual distribution of the water, the D.P.W. establishment would be such as would be sufficient to give a sufficient staff to work the head sluice and to carry out the ordinary mile coolies' work. For this, 1 head cooly on Rs 8, and 3 mile coolies on Rs 5 should be sufficient. Their pay would come to Rs 276. As regards water distribution, this could ~~but~~ best be done by Kavalgars acting through the village monigars, under the Minor Irrigation Department. Their ~~members~~ number might be ~~those~~ that suggested by the Sub Dn officer, viz 4, at Rs 5 per mensem, their pay would amount to Rs 240.

The annual amount needed therefore for the general up-keep and regulation of the Channel will according to the above data amount to

1)	Spring Channel	Rs 200
2)	Maintenance of Channel and masonry works —	" 300
3)	P.W.D. Petty establishment —	" 276
4)	M.I. Coolies for distribution of water –	" 240
	Total Rupees —	" 1016

an amount which is Rs 135 above the amount specified by the Collector as the probable amount of the special cess.

I have given orders for an investigation of the state and capabilities of the Channel and am of opinion that if the Channel is put into proper order and carefully maintained an increase in the irrigated area is probable, in which case the excess on the cost of maintenance over the amount of the cess will be reduced. I do not think, however, that the excess need stand in the way of the arrangement as so far very little of the attention which a channel of such importance deserves has been paid to it and the entertainment of maintenance establishment need not I think be considered as

debitable

debitable to the amount of the Voluntary cess. The complete estimate for the channel will be submitted when received.

I have etc.

Signed J. S. Wilson

Executive Engineer

Proceedings of the Board of Revenue

(Revenue Settlement, Land Records and Agriculture),

Dated 9th December 1896.

No. 1867 Routine.

READ the following letter from the Collector of South Arcot, dated 3rd December 1896 Reference in Cho 5218:—

Referring to Board's Proceedings 4245 Mis dated 1st November 1896, I have the honor to enquire whether the Chief Engineer has replied to the Board's reference regarding the levy of a voluntary cess for the conservancy of the Wallajah channel and to request that the early sanction of Government may be obtained for its repair. At the instance of the ryots

the Head Quarters Deputy Collector
in his letter Reference on 2741/C.L.
dated 25th November 1896 presses for
the immediate repair of the channel
and it is most desirable, in the
interests of Government and the
ryots, that the repairs should
not be delayed.

Read also letter from the Chief Engineer for Irrigation, dated 3rd December 1896 No 499 M.

Resolution.

The Chief Engineer's letter read above will be communicated to the Collector with reference to his enquiry.
