Specification of the invention of George Ewins
late of Calcutta, and now residing at 85 Manchester
Street, Manchester Square, London, in the County
of Middlesex, Surgeon.
 For a mode of treating, preparing and pro-
 serving for medicinal purposes the pulp, and
 valuable parts of the Baobab fruit of India, and
 our Eastern dependencies (Aloe Caramels of
 Botanists) commonly known as the Elephant
 Apple, and by some called the Indian Quince
 or Jungle Orange.
Whereas I do hereby declare the nature of my said inven-
 tion, and in what manner the same is to be
 performed to be particularly described and
 ascertained in and by the following state-
 ment thereof, that is to say -
 I take, at the proper season of the year
 when the fruit is in the highest perfection
 a quantity sufficient for my purpose -
 selecting such only of the best, rejecting
 all that are over-ripe, stale, or mouldy
 of carefully removing any part, having
 the least appearance of damage or decay
 which would act as a leaven, or ferment
 would spoil the whole. Then the material
 thus obtained through a fine sieve to free
 it of the contained seeds and indurated fi-
 brous matter, and to the strained mass.
 I add a quantity of Mallow root or any
 kind of farinaceous or other suitable
 matters not injurious to the pulp, which
 it to be well incorporated with it, by ap-

propriate means, so as to convert the whole into a stiff paste, and make it of an uniform quality and consistence. It is now to reach out upon fresh gathered Phacelia leaves, in thin layers, and exposed to the full action of the sun, or otherwise submitted to artificial heat, but I prefer the former as less injurious to the properties of the fruit. in order to dry off rapidly the contained moisture, by which means it is expeditiously converted into a hard, crisp, and orange colored cake. It is then easily broken up, and ground like wheat into fine flour or meal, when it is finally sifted to free it from any unaltered particles or accidental extraneous matters and enclosed in well sealed and closely stoppered bottles to secure it from the action of the Atmosphere.

Having thus described my invention what I claim thereon is the method of drying & combining the Bael fruit with Lacciferous & other preservative substances as a medicinal Agent.

In Witness whereof I the said George Edans have hereunto set my hand the 14th day of November one thousand Eight hundred and Fifty Nine -

Geo. Edans

2/5

I George Edans, late of Calcutta, now residing at 55 Manchester Street, Manchester Square, London, in the County of Middlesex - Surgeon do hereby solemnly and sincerely declare that I am in possession of an Invention for the preservation of the Bael fruit of India and our Eastern Dependencies, which invention I believe will be of public utility, that I am the inventor thereof and that the same is not publickly known or used in India or any part of the United Kingdom of Great Britain and Ireland to the best of my knowledge and belief, and that to the best of my belief the instrument in writing under my hand hereinto annexed particularly describes and ascertains the nature of the said invention and in what manner the same is to be performed.

Geo. Edans

Under Secretary to the Government of India.

(Here enter 18th Feb. 1860 No. 321.)

Order thereon 24 February 1860 No. 293

Resolved that the copy of the Specifica-
tion of * Invention received from the Govern-
ment of India, be filed in conformity with
Section X Act No. VI of 1856.

* For the mode of
treating, preparing and
preserving for medicinal
purposes the pulp and
valuable parts of the
Sael fruit of the
tree *Myrsine*
"Santalum"
