Sanitary report on the Prabhachavam Festival held at Upper Tirupati in September 1888

1	2	3	4	5	6	7	8	9	10	11	12
District	Name of Report	Name of Festival and when held	Date of Festival	Number assembled	Accommodation and Sanitary arrangements made	Water Supply	Conveyance	Epidemics	General health	Recommendations	Remarks by the Sanitary Commissioner
Madras	1st Class Hospital Assistant Narayana Rao No. 15	Prabhachavam - at Upper Tirupati	From 8 th to 17 th September 1888	about 25,000	There was a sufficient number of Choultries and vacant houses for hire. 2. Carts 13 sweepers and 1 Pygmy were employed who kept the road &c clean. (a) About the end of the Festival four nominal latrines were formed of branches and leaves of trees but these were very seldom used as the grounds in and around them were covered with bushes and there were no paths to reach them. Pilgrims used the adjoining jungles and sides of roads for purposes of nature. (b) A temporary Cholera Shed was also erected having branches of trees for its walls and bamboo near for its roof. This would not answer its purpose satisfactorily, as patients could not be accommodated comfortably in it. (c) The cost of sanitary arrangements is said to be Rs 60-0-0.	Water is supplied by means of pipes from different tanks which receive the supply during rains. There is a temple authorities supply was not sufficient to the same in part of the tanks having been injured &c there was no outlay and the people managed with the supply of hand.	Vide Column 6.	There was only a single case of Cholera which proved fatal. Prompt measures were taken to check the spread of the disease and no more cases occurred.	The general health of the people was satisfactory.	I observed that in a certain part of the outer compartment of the Pagoda, decomposed Conjee water mixed with boiled rice, being the rejection from the cook room, was allowed to collect and stagnate. This emitted a very offensive odour. On my advice it was immediately removed and the place was kept clean by the temple authorities. The above nuisance was also notified by the Tahsildar of Chingazhi and the Dy. Tahsildar of Tirupati. I would suggest that in future a drain be constructed for the conveyance of this refuse Conjee water, &c out of the Pagoda into a moveable receptacle should be supplied and cleaned frequently or as often as is necessary. Signed Narayana Rao
1st Class Hospital Assistant
on Special Sanitary duty

(Narayana Rao)

Respected Sir:

The remarks of the Hospital Assistant referred to in para 11 apply to cases Example.

I took the Perikar three times & the place
in question & whole

and made him personally ~~smell~~ the offering ^{to} smell and got the place cleaned. There is no

outlets from the inner side of the temple, ^{to carry this refuse} the
 Zahid also drew the attention of the Priest.

Went to this state inside the temple. I brought this to the notice of the Mahant and suggested

that a regular drain should be built & carry
off the refuse of the Cook room or that the

refuse should be cleaned into a wooden
tub which should be cleaned every 6 mo &

there. As cholera spread is a necessary one on the hills ^{I suggest that} the District Board or the

Manufactured brick a permanent
shed furnishing it with all necessary

things instead of making money
every year. A week before the pest-

mal, I issued orders to the village
men at Upper Kaniath, and ^{also} forced
them to give ~~me~~ nine ^{ten} rees of

Cholera shed and latrines, but the work
was actually commenced only after I had

to the hills. Similar orders were issued to the
