PUBLIC DEPARTMENT.

From G. BIDIE, Esq., M.B., C.I.E., Surgeon-General with the Government of Madras, to the Chief Secretary to Government, dated Madras, 21st November 1889, No. 343.

I have the honor to enclose herewith a brief report on the health of the Ganjam district for the month of October last, also a tabular statement showing the diseases treated in the relief camps.

2. The total number which received relief in the month under review was 121,681, against 190,542 in the previous month.

3. The numbers of men, women and children receiving relief during the two months were as follows:—

						Men.	Women.	Children.
September...	..	..	..	..	..	33,404	50,500	106,638
October ..	..	..	..	..	..	27,500	37,139	57,042

4. Thus there were in all 68,861 less relieved in October than in the month of September. The number of in-patients admitted was 35 against 151, and of out-patients 1,005 against 1,804 in September.

5. There were 35 deaths from cholera (outside the hospitals), which disease was confined during the month to the Chicacole taluk.

6. Small-pox prevailed in several taluks, notably Berhampore, Goomsur, Ichapur and Balliguda. *

7. The general health of the Ganjam district showed improvement during the month under review.

ENCLOSURES.

FAMINE.

BRIEF report on the health of the people in the Ganjam district during the month of October 1889.

Cholera—has prevailed in a sporadic form during the month under report; the disease has been almost entirely confined to parts of the Chicacole taluk; the total number of deaths reported have been 35. In the week ending with the 14th October, there were only two deaths; there was a sudden rise next week, 17 deaths being registered; and in the week ending with the 28th of the month, there were only seven deaths.

Small-pox—has prevailed in several taluks in the district, being most severe in Berhampore, Goomsur, Ichápur and Balliguda in the Agency tracts. There were 17 cases treated in the kitchens and relief works, 6 of these having proved fatal. Orders have been issued to the vaccinators and medical officers of dispensaries to pay more attention to vaccination, and I trust that the progress of disease will in some measure be checked.

Malarious fevers—are more or less prevalent throughout the district, and will in all probability increase in severity during the next few months. In the Berhampore and Goomsur taluks, a large number of cases have been reported; several towns in which the disease prevailed to a great extent for the last two years, notably Berhampore, Bárúva and Ganjam, are at present particularly free from it.

The health of the district during the month has on the whole been satisfactory.

BERHAMPORE,
11th November 1889.

(Signed) R. PEMBERTON,
Acting District Surgeon.

5. There were 35 deaths from cholera (outside the hospitals) which disease was confined during the month to the Chicacole Taluq.

6. Small-pox prevailed in several Taluqs notably, Berhampore, Goomsur, Itchapur and Balliguda.

7. The general health of the Ganjam District showed improvement during the month under review.

I have the honor to be

Sir

Your most obedient servant.

David M. B. C. E.

Surgeon General

With Govt. of Madras

DG.

	Men	Women	Children
September	33404	50509	106688
October	27500	37139	57042

4. Thus there were in ~~all~~ 68861 less in-
 relieved in October than in the month of
 September. The number of in-patients
 admitted was 35 against 151 and of out-
 patients 1005 against 1804 in September
