Offg Under Secy. to the Govt. of India,

To

The Chief Secy. to the Govt. of Madras.

Home Department.

(Medical.)

Simla, the 26th October 1892.

Sir,

In continuation of the letter from this office No. 232, dated the 22nd September 1892 and with reference to the remark made in para. 3 of that letter that Dr. Kings' experiments with lymph prepared from small pox virus were not new experiments, I am directed to enclose an extract para. 23 from the Annual Report of the Civil Medical Department of His Highness the Nizam's Government for the year 1891.

I have the honour to be,

Sir,

Your most obedient Servant,

H. Luson.

Offg. Under Secy. to the Govt. of India.

26. The process of vaccination is carried out now ex-
clusively with calf lymph which is cultivated in the Vaccination
Department of the Medical School. It was commenced in the year
1887 by the inoculation of calves with small-pox virus taken
direct from a small-pox vesicle in the human subject. This was
found to produce typical cow-pox in the calf and inoculation
from cow-pox vesicles produced typical vaccination in the human
subject. The inoculation from calf to calf has been kept up
ever since.
