MADRAS RECORD OFFICE.

Government of Madras.

Revenue DEPARTMENT.

G.O. No. 648 — Press Mis.

Dated 11/7 — 5 — 1859.

Not to be folded or roughly handled

Proceedings of the Madras Government, Revenue Department, from 11th to 17th May 1859.

No. 1. Read the following Extract from the Proceedings of the Board of Revenue, dated 19th March 1859, No. 949.

Read letter from the Collector of Salem, dated 1st November 1858.

In their Proceedings of 31st January 1856, No. 319, the Board brought the depressed state of the Salem District before Government, and proposed measures for the relief of its land-holders. An immediate reduction was recommended by the Board in the Assessment of the dry lands in the eight Talaghaut Talooks, commonly known as the Southern division, where taxation fell with the greatest weight, and enquiries were proposed to be made to ascertain what relief was necessary for the other wet and dry lands of the District, especially for the uncultivated portion, until a regular Survey placed the Assessment of the District on a satisfactory footing. The Well Garden lands of Salem had been already brought under the notice of Government in a separate communication, and orders were passed regarding them in Extract Minutes Consultation 20th December 1855, No. 1372.

In Con. 24th January 1856.

2. The measures proposed by the Board did not meet the approval of Government; further information was deemed necessary, and forms of Statements were sent to the Board with instructions to call upon the Collector to fill them up and report in detail what different measures of relief were necessary for the various classes of land in his District. But pending this enquiry a temporary remission of 12½ per cent. was allowed on all dry lands assessed at and above Rupees 1-5-4 per acre in the eight Talaghaut Talooks.

3. The Collector, Mr. Brett, has made his report on the general subject in the letter which stands at the head of these Proceedings, accompanying it by 107 Statements drawn out in the form prepared in the Government office. Mr. Brett enters into an elaborate detail of the measures which he deems necessary for granting due relief to the landowners of the District. But this report was called for under an impression that many years must elapse before the Revenue Survey reached the District, and Mr. Brett points out that there is no satisfactory data on which to act in revising the assessment pending that Survey; the Board will therefore confine themselves chiefly to considering what impediments to cultivation should be immediately removed, as attempting more than this would lead to complication and confusion, now that the Director of Revenue Settlement has been instructed to commence operations at once in the Salem District.

Poonjah.—4. The Poonjah or unirrigated lands occupy the first portion of Mr. Brett's report, and separate plans are proposed for the revision of their assessment in the eight Talaghaut, the four Baramahal and the two Balaghaut talooks. The Board will proceed to consider these lands in the same order.

Talaghaut.—5. The eight Talaghaut talooks are situated below the Ghauts and comprise the Southern and Centre Divisions, in which the assessment was fixed, under Colonel Read's general superintendence, by Captains Macleod and Munro. The Poonjah lands of these talooks, especially of those assessed by Captain Macleod, have been long acknowledged to be more highly taxed than in the remainder of the District. The effects of this overtaxation were

1 *Ahtoor*.....	*Southern or Macleod's Division.*	*Macleod and Munro.*
2 *Salem*.....		
3 *Namkull*.....		
4 *Razepoor*.....

8 *Womaloor*.....		

shewn in a declining revenue and an impoverished people, and the Board were therefore anxious to lose no time in placing them on an equality with the rest of the District. For this purpose they proposed a general reduction of 25 per cent. on the cultivated lands, and of 33⅓ per cent. on the waste of five years' standing, provided that the assessment was not thus to be reduecd below Rupee 1 per acre. It was further recommended that the highest Poonjah rate should be Rupees 4½ per acre. These arrangements would have led to a surrender of revenue to the amount of Rupees 1,23,616 on the lands under cultivation, while the assessment of the waste would have been reduced to the extent of Rupees 1,76,475; but the area newly offered for cultivation at the reduced rates would have borne an assessment of Rupees 3,52,951, and was expected to have speedily made good the temporary loss of revenue and added permanently to the resources of the State.

Board's Pro. 31st Jany. 1856, paras. 46 and 50.

Proportion of Cultivation to Waste.
In Southern Division 49 per cent.
,, Centre do. 50 ,,
,, Northern do. 63½ ,,

In Colonel Read's Notification of 10th Dec. 1796, Rule 6, one-third of the gross produce was taken for the Govt. share on dry lands. See also Collector's letter of 17th January 1855, p. 4. Book on commutation rates, page 216.

Note.—Mr. Brett might have added a third cause which the Board had in view when referring in p. 53, of their Proceedings of 31st January 1856, to the faulty principles of the Survey Assessment. Instead of the quality and situation of the land being alone looked to, the stock, strength and health of the then existing landholders were taken into account by Colonel Read.—See p. 186 of his report dated 4th April 1800.

6. Mr. Brett argues (p. 15) that the prevalence of Poonjah waste throughout the District proves a *general* overtaxation, and then enters into a discussion on the theory of rent where it seems unnecessary for the Board, on this occasion, to follow him. He points out, correctly in the Board's opinion, that even if the lands had been originally classified with correctness in reference to their productive powers, still unevenness of taxation must have resulted from two of Colonel Read's rules, viz. 1st, the same proportion of the gross produce being taken for the Government share on the inferior as on the superior lands (p. 16 &c.) such a course evidently leading to unequal results when the expense and labor of cultivation do not vary in proportion to the amount of produce obtained. 2nd one commutation rate being used, whatever might be the situation of a village with respect to markets, (p. 28).

P. 31. But Mr. Brett further argues that the classification itself is proved to have been wrongly made, by the prevalence of waste which is found even among lands of good quality, and states that the want of correct data prevents this error being satisfactorily rectified without a survey. Anticipating however delay before this remedy could be applied Mr. Brett expresses a hope that it is not "impossible to find a partial remedy, which will at least

P. 34. "improve the revenue and at the same time by throwing open more land be "beneficial to the people."

7. In proceeding to consider what these remedial measures should be for the Poonjah lands Mr. Brett proposes the largest relief for the eight Talaghaut Talooks. He appears to be of opinion that their high comparative taxation may not be *altogether* an error

P. 14 and 35. on the part of the assessing officer, but may have some foundation in a superiorty of soil over the Baramahal and Balaghaut Divisions. Still after allowance has been made for this. Mr. Brett brings forward facts which shew that this part of the District demands the largest measure of relief. For example a Poonjah Assessment fixed professedly on the same portion of the produce exhibits the following great variations.

P. 11.

	Mean rate per acre. Rs.	A.	P.
Southern Division	1	12	3
Centre ,,	1	5	7
Northern ,,	1	0	4

The per centage of land assessed at less than Rupees 2 per acre also varies in a striking manner. In the Baramahal and Balaghaut it forms 95 and 93 per cent. of

Para. 11. the total area, while in the Southern and Centre Divisions the per centage is only 70 and 84. It has been already shewn in the margin of para. 6 that the proportion of cultivation to waste is smallest in the Southern talooks, but in case it should be thought that there is no very striking disparity in this respect, the Board would observe that various local circumstances, such as denseness of population, vicinity of markets and salubrity of climate, may modify the effects which, if all other circumstances were similar, would follow in equality of taxation. The surest test of over-assessment is a decline of revenue caused by a decreased cultivation, and the Board have shewn that this has been eminenly the ca s ein the Southern talooks of the Salem District, although they have enjoyed the advantage of fifty years of peace and regular Government.

Board's Pro. 31st January 1856, para. 31.

Paras. 40 and 45. 8. The relief which Mr. Brett now proposes for these talooks is as follows:

I. All grades of land, cultivated and waste, assessed at Rupees 5 and upwards to be reduced to Rupees 4 per acre.

II. A reduction of 18¾ per cent. on all cultivated land, now paying from Rupees 4½ to 1¼ per acre.

III. A reduction of 31¼ per cent. on the waste of the above grades.

IV. A reduction of 6¼ per cent. on all lands, cultivated and waste, now paying Rupees 1¼ per acre and under.

The financial results of the above plan, as gathered from Statement 25, would be the following, and are shewn in contrast with the temporary scheme recommended by the Board in their Proceedings of 31st January 1856.

Mr. Brett's Plan.	Reduction on cultivation.	Reduction on the waste.	Available waste at the reduced Assessment.
	Rupees.	Rupees.	Rupees.
I. Reduction of the higher gardes, both cultivation and waste, to Rupees 4 per acre...	4,217	6,779	11,356
II. Reduction of 18¾ per cent. on cultivation from Rupees 4½ to1¼ per acre.....	76,432	.....	.....
III. Reduction of 31¼ per cent. on the waste of above.....	.....	1,37,272	3,02,000
IV. Reduction of 6¼ per cent. on cultivation waste, from Rupees 1¼ downwards.....	5,491	4,877	73,154
	86,142	1,48,928	3,86,510
Board's plan in Proceedings of 31st January 1856, See ante para. 5.....	1,23,616	1,76,475	3,52,951

9. The details of Mr. Brett's scheme call for the following remarks. In fixing Rupees 4 as the highest Poonjah Assessment instead of Rupees 4½ as* at first recommended by him, Mr. Brett adopts a rate which has been approved of by Government† as a maximum for *ordinary* Poonjah land, and which is nearly the same as the rate proposed by the Board, viz. Rupees 4½. But if this rate is to be adopted it would be necessary to make provision for a higher and special rate being retained for the valuable Poonjah lands which are situated close to villages and are used as Gardens. In South Arcot lands of this description pay Rupees 7-1 per Cawney, or Rupees 5-5-5 per acre, under the revised Assessment and in North Arcot Government deemed it proper that they should be assessed at rates varying from Rupees 6 to Rupees 4 per acre. This point requires careful consideration, because even for the first class of ordinary Poonjah land an Assessment of Rupees 4 represents according to Mr. Brett ¼ only of the gross produce at the prices of Fusly 1262, and prices have since greatly risen, nor is there any reason to anticipate that they will again sink to their former low state. The effect of the Railway and other causes forbid such a supposition. The Board are not therefore prepared to recommend an immediate and indiscriminate reduction of all the higher Poonjah rates to Rupees 4. The maximum should not be lower, they think, than Rupees 6, as in the adjacent District of North Arcot, pending the careful enquiry and examination which will be made at the Survey.

10. The 2d and 3rd parts of Mr. Brett's scheme from its most important feature, and have next to be considered. It is proposed to modify the assessment on all Poonjah lands now rated at from Rupees 4½ to 1¼ per acre, by granting a reduction of 18¾ per cent. on the cultivated portion and of 31¼ per cent. on the waste. The lands comprised within these limits form the principal part of the Poonjah area; and in dealing with them Mr. Brett has adopted the principle proposed by the Board of allowing a large reduction on the waste than on the cultivated portion. The Government were not altogether satisfied with the soundness of this principle, when it was brought before them in the Board's Proceedings and observed—"They will not "here pronounce any decided opinion on the question as "regards the other (Poonjah and Nunjah) lands, but they "would wish both the Collector and the Board to give the "subject careful consideration, in a practical aspect, and "state their views upon it in submitting the furthur information and report called for."

E. M. C. 11*th in Con.* 28*th April* 1856, *No.* 372, *p.* 12.

11. In his first scheme for revising the assessment of his District Mr. Brett had proposed to classify the lands according to their rates of assessment, and then to allow a similar reduction for the cultivated and the waste portions, the extent of the reduction depending upon the proportion which the cultivation bore to the waste in each different class. In now recommending a different course, viz. a larger reduction upon the waste than upon the cultivated lands, Mr. Brett's reasoning may be summarised, the Board think, in the following manner. The extensive prevalence of waste in every grade shews overassessment in both the superior and inferior soils (para. 15). The inferior soils must be comparatively over assessed from the principle followed by Colonel Read of taking the same portion of their gross produce for the Government share as on the superior lands. "The natural effect (of this rule) on the inferior qualities was to throw them out of cultivation" and favor the superior soils (para. 19). As the same portion of the gross produce was always taken, the presumption is that where lands are left waste, it is because they were wrongly classed, or in other words their productive powers were rated too high (para. 29). The probability that the overassessment is high increases as the grades ascend, for the superior soils could easily have paid a third part of their gross produce, "if no mistake had been made regarding their real quality" (p. 30). As therefore the Surveyors must have been so often in error with regard to the waste lands, "it is fair to assume that they also made great mistakes, although not equally great "mistakes in respect to the lands under cultivation" and "in this point of view cause is shewn for "making a reduction in both the cultivated and the waste, though not for making a uniform re-"duction on both."

See Board's Proceedings of 31*st January* 1859, *p.* 14 *to* 18.

12. Without minutely criticising this chain of argument, the Board will here observe that had circumstances remained unaltered in Salem, they would have continued to support the principle now advocated by Mr. Brett; a principle which, it may be remarked, has been sanctioned in the case of the Coimbatore gardens, and which the Government have not now absolutely opposed though they advised carefulness in its use. But an important change has taken place. The plan proposed by the Board of allowing a different rate of reduction for the cultivated and the waste lands was acknowledged by them to be able to do no more than correct "in some degree" the existing errors, and it was proposed for adoption when there was no early prospect of the assessment being rectified by the introduction of the Survey into the District. But such an arrangement would necessarily be tantamount to altering the present classification of the lands, since lands hitherto taxed alike would in future pay different rates of assessment, and the Board would therefore hesitate to recommend the measure now that Survey operations are about to be commenced in Salem. Under this altered state of things it seems best not to introduce temporary changes in the relative position of lands hitherto on an equality as to assessment, and to adopt merely some general measure for extending cultivation and relieving the landed interest, leaving the details of a revised assessment to be settled in the approaching Survey. The Board would further observe that in proposing a larger reduction for "waste" they confined their proposition to waste of five years' standing, while Mr. Brett's plan includes all land which did not happen to be under cultivation in Fusly 1262.

Ex. M. C. 14*th Aug. in Con.* 7*th Oct.* 1847, *p.* 4.

Board's Pro. 28*th April* 1856, *p.* 10.

13. The 4th and last part of Mr. Brett's scheme proposes a reduction of 6¼ per cent. on all land, cultivated and waste paying Rupees 1¼ and under. This recommendation seems based on the argument that the original assessment was unfavorable to the inferior soils by being fixed on a third of the gross produce, for otherwise Mr. Brett himself shews a strong reason against such a measure in para. 36 where he points out the necessity of guarding against "the very low class "lands coming into competition with the large quantity of better qualities which, under the "reduction, will be available for cultivation." "It is not necessary" he adds "to prove that "inferior lands, if disproportionately assessed, may be cultivated at a greater profit by the culti-"vator than lands of better quality, though there can be no such advantage in any case to the "revenue. It ought to be better for the ryot, as it must be for the Government, that he should "cultivate the lands of superior quality."

It was the evident impolicy of attracting cultivation from the richer to the poorer soils which led the Board to arrange that their reductions were never to lower the assessment below Rupee 1 per acre. On the same principle the temporary remission of 12½ per cent. allowed by Government is confined to lands paying Rupees 1-5-4 and upwards, and the Board do not consider that it would be safe to reduce the assessment on the most lowly assessed lands, as proposed by Mr.

Deed Anna, or one and half Anna Assessment, although the increase was not always made precisely at that rate. This addition was imposed to raise the Assessment to what it had been under the preceding Mysore Government and the Tarum rates of Mr. Cockburn were also departed from in assessing such lands as were newly taken up for cultivation after the Survey.

Nos. 27 to 35.

19. The Statements forwarded by the Collector regarding these Talooks shew that the Assessment is comparatively moderate, and that the usual consequence has followed, viz., a larger proportion of cultivated to Waste land. Mr. Brett therefore proposes only to strike off the additional Assessment, adopting hereafter the Tarum rates, in which recommendation the Board concur, though more for the sake of simplifying the system than of affording relief to the land-holders. An addition of $1\frac{1}{2}$ Anna is equal to $9\frac{6}{16}$ per cent, and stricking off such an extra cess would be an important benefit, but the Board find from the Statements which accompanied Mr. Brett's reports that it can only have been partially imposed as the Survey Assessment of the two Talooks on the Poonjah lands amounts to Rupees 1,36,526, while the addition to it on account of the Deed Anna cess is only Rupees 3,665. If Government sanction the measure now proposed, the immediate loss of revenue would be limited to Rupees 2,494, or that portion of the Deed Anna Assessment, which falls on the lands now under cultivation.

Nunjah.

20. The Nunjah lands are next noticed in the Collectors's report, commencing at para. 52. Their total extent, divided into cultivated and Waste, is as follows:

	Iyacut.		Cultivation.		Waste.		Per centage of cultivation.		
	Acres.	Rupees.	Acres.	Rupees.	Acres.	Rupees.	Acres	Rs.

Talaghaut and Baramahal.

21. In treating of these Nunjah lands it will be proper to notice first the 12 Talaghaut and Baramahal Talooks in which an uniform system of Assessment was introduced under Col. Read's superintendence. The subject is complicated because irrigated lands of the same quality had not always the same Assessment fixed upon them. The rates varied not only with respect to the *description* of irrigation such as tank, channel, and well, but also with respect to its *quality*. Lands under a superior channel or tank, for example, were assessed more highly than others under a channel or tank of an inferrior order. This diversity of Assessment was attained by taking different proportions of the net produce for the Government share—the rates varied from 80 to 55 per cent. as shewn by Mr. Brett in the marginal statement of p. 57, which has been copied from Col. Read's Survey Report.

22. In following this principle Colonel Read formed a scale of 12 grades for the Nunjah lands with rates of Assessment for each ranging from Rupees 35 per acre for the best lands with first class river irrigation to Annas $7\frac{1}{2}$ for lands of the lowest quality watered by inferior wells. It will be observed that this scale provides also for cases where lands are watered from two different sources of irrigation, or partly from a tank and partly from a well. To simplify the subject Mr. Brett has judiciously prepared his tables in the following manner. Each of these 12 talooks has one Statement to shew its channel irrigated lands (omitting the Cauvery Channels) and another to shew its tank lands, including under this head those which are watered in part from a tank and in part from a well. The Nunjah well lands are shewn in separate Statements, and the Cauvery Channel lands have, on account of their importance, a Statement to themselves (No. 84) instead of being blended with the other channel irrigation.

P. 56.

Note.—In the Survey no distinction was made of one or two crop Nunjah land. When means existed of raising a second crop, the produce of two crops was taken as the basis of the Assessment, consequently Nunjah land in Salem is charged only with the Survey Assessment and there is no demand on it under the head of Fasal Jasty. (Among other papers on this point see letter from Collector of 18th May 1255, in Con. 16th January 1856.)

P. 58.

23. But the above Statements apply only to the "*Fysul*" or lands assessed at Colonel Read's Survey, and separate Statements have been prepared for the "Ileevur* Nunjah." This land consists of unassessed waste or of Poonjah fields, which have been brought under a Nunjah Assessment subsequent to the Survey, the Assessment having been fixed sometimes at the average of the village and sometimes at the rate of adjoining lands of similar quality. A separate Statement has also been prepared for the Manavary Nunjah, or lands on which wet crops are grown by the aid of the falling rain, in case Government should decide on treating it differently from other Nunjah, and bringing it under the head of Poonjah or unirrigated.

* *Note.—The Board adopt Mr. Brett's mode of writing this Hindoostany word, to prevent doubt and obscurity.*

Paras. 53 and 55.

Statement No. 91.

24. Following the course pursued under the instructions of Government in the case of dry lands, Mr. Brett has taken the cultivation of Fusly 1262 as the basis for his Statements, and observes that although the prevalence of waste does not shew an equal degree of over-assessment as in the case of the Poonjah lands, still it is clear that both over-assessment and inequality of taxation do exist, and from the same causes, viz. taking the same proportional share of the gross produce from lands of different qualities, and making errors "in over estimating the qualities of the lands." The latter point was one, the Board may here observe, which caused Colonel Read much anxiety as it was evident that his rules could not prevent inequality of taxation, if the Surveying Officers made mistakes in calculating the rates of production, or in other words "in estimating the qualities of the lands." Mr. Brett further remarks that the Assessment on the Nunjah lands as on the Poonjah is highest in the Southern Talooks which formed Macleod's Division, and if the Board do not dwell on this point it is because the fact has been acknowledged from Colonel Read's time, and is established by all the Revenue records†.

Paras. 65 and 68.

Col. Read's Report of 4th April 1800, p. 192.

Paras. 63 and 64.

†*Col. Read's Report of 4th April 1800, p. 196 and 197. Mr. Orr's Jamabundy Report for 1245, p. 37. Bd's. Pro. 20th June 1850, No. 259, p. 25 and E. M. C. 10th July 1852, No. 669, p. 7.*

25. Viewing the errors of the Nunjah Assessment as springing from the same errors in the Survey Mr. Brett proceeds to propose for the Talaghaut and Baramahal talooks remedial

Para. 67. measures arranged on the principles which he recommended for their Poonjah lands. He suggests that Rupees 14 should be the maximum rate for the Fusal and Ileevur Nunjah lands, ommitting from his scheme those watered by the Cauvery Ch annels) and that a per centage reduction should be granted on all the grades assessed at Rupees 5 and upwards, a larger reduction being allowed on the waste than on the cultivated lands. As the over-assessment was not so great as in the case of the Poonjah lands, the proposed reduction is smaller, and as the proportion of waste to cultivation did not vary in any great degree the same rate of reduction has been recommended for all the grades to which the proposed measure extends, viz. 12½ per cent. for the cultivated lands and 18¾ for the waste. The effects of this scheme are shewn by the marginal Statement of para. 67 to be as follows:—

Reduction on the cultivation...	Rs.	32,805
Do. on the waste	,,	22,333
Total...	,,	55,138

The waste available for future cultivation consists of 17,608 acres with a modified assessment of Rupees 1,11,941.

26. For the reasons already given the Board consider it unadvisable, pending the Survey, to alter the relative position of the lands by granting different rates of reduction for the cultivation and the waste, but they are opinion that it is for the interests of the State and the people to remove at once impediments to industry by reducing the assessment. That extended cultivation will follow more moderate taxation is in Salem no speculative theory. Proof of it is visible in the Statement attached to para. 21 of these Proceedings, on comparing the cultivation of the Fysul with the Ileevur Nunjah which was assessed subsequent to the Survey in a more favorable manner. Again it was found after the Mootahdary system broke down that the cultivation spread considerably on the Collector modifying the Survey rates by discretionary Cowles, but as this system was disapproved and no relief was afforded in a different manner, lands were again abandoned and two-thirds of available area remained waste. The fact of some of the finest Nunjah lands lying uncultivated in the Southern talooks "on account of their extravagant assessment" was noticed by the Principal Collector Mr. Orr, in a manner which attracted the attention of Government,* and other instances of the consequence of over-assessment and of the prosperous state of Villages where Mr. Hargrave's reductions were carried out are detailed in the papers which were reviewed in Board's Proceedings of 20th June 1850, and in Extract Minutes Consultation 10th July 1852, No. 669.

One instance is given where 40,885 *acres held on Cowle, were brought back to the Survey assessment and* 30,212 *were thrown up, see letter from Collector 8th November* 1847, *p. 2 in Con. 20th January* 1848.

E. M. C. 14*th August in C.* 7*th October* 1847.

* *E. M. C.* 6*th in Con.* 22*nd June* 1837.

27. In Salem as has been remarked no Fasul Jasty is charged, the calculations on which the Survey assessment was based having included a second crop where opportunities existed for its cultivation. But still considering the large portion of the produce taken for the Sircar share, and the sanction which was given by Government on this account for introducing Mr. Hargrave's modified rates of Rupees 9-3-4 and 6-12-4 into the village of Edumbancolum for the better 2 crop lands, and his rate of Rupees 14-9-3 for the first class lands in the Cauvery Channel Village of Teroomalanamasamoodrum, the Board support Mr. Brett's proposal of making Rupees 14 the maximum Nunjah rate in these 12 Talooks, omitting the Cauvery Channel Villages. They also concur with him in proposing no reduction on lands paying Rupees 5 and under. But instead of giving a uniform remission on all the rates between Rupees 14 and Rupees 5 the Board deem it advisable to give 12 per cent. on the rates down to Rupees 9, and 8 per cent on the rates from Rupees 9 to Rupees 5½. It appears advisable on general principles to give a larger degree of relief to the highly assessed

E. M. C. 10*th July* 1852, *No.* 669.

E. M. C. 5*th September* 1859, *No.* 947.

lands, and by adopting this course it becomes safer to apply the same measure to the Talaghaut and Baramahal talooks both for their Fysul and Ileevur Nunjah lands.

28. The following details of the Fysul Nunjah lands are taken from the Statements 80 to 83.

	Per centage of Cultivation	Waste.	Mean Rate per acre. Iyacut.	Cultivation.	Waste.
Tank—Talaghaut	64	36	8 6 4	8 4 1	8 10 4
Channel	67	33	9 3 0	8 13 7	9 15 7
Tank—Baramahal	72	28	5 5 0	5 4 6	5 9 6
Channel	74	26	6 5 1	6 6 9	5 12 2

It thus appears that owing to a perponderance of highly assessed land the mean rate per acre is greatest in the Talaghaut Talooks, and the proportion of waste to cultivation also there preponderates, though not in the rates which the mean rates of Assessment bear to each other. But on comparing the proportion of waste to cultivation in classes of lands bearing the same Assessment, whether under Tank or Channel Irrigation, in the Talaghaut and Baramahal Divisions, the Board find no results on which to base a more exact and equitable measure of relief than what they now propose. Should it meet the approval of Government its effect on the revenue would be follows:—

	On Cultivation.	On waste.	Available Waste at reduced rates.	
	Rupees.	Rupees.	Acres.	Rupees.
I. Reduction of 12 per cent. on all lands from the highest to Rupees 9 per acre...	14,804	8,155	5,350	57,782
II. Further reduction on above lands to bring their modified Assessment down to Rupees 14	2,055	2,023		
III. Reduction of 8 per cent. on all lands paying from Rupees 9 to Rupees 5½	8,672	3,319	5,925	38,177
Total...	25,531	13,497	11,275	95,959

In thus modifying the Collector's scheme the Board do not intend to imply that the measures proposed by him were more liberal than circumstances required. But as prices* have risen and a Survey is about to be made, they are led to modify the recommendations which they would otherwise have made, since any very extensive reductions now might render the Survey operations less easy.

* *Price of Paddy per Garce.*

	1*st Sort.* Rupees.	2*nd Sort.* Rupees.
Commutation rate	95	0
1202 *to* 1206 *Fusly*	136	0

1265 ,,	131	118
1266 ,,	117	106
1267 ,,	159	144

Manawary.—29. For the Manawary lands Mr. Brett has prepared two arrangements. The first is to reduce their assessment in common with the Nunjah lands (para. 67), and the second is to treat them as Poonjah for which purpose it is proposed to reduce the higher rates to Rupees 4, leaving the others untouched (para. 69).—The second course is in accordance with the principle upon which Government have in other Districts treated lands of this description for which irrigation is not supplied, but if the Poonjah maximum is for the present to be Rupees 6, as recommended in para. 9 of these Proceedings, it will be proper to adopt that rate here instead of Rupees 4. The Manawary lands limited to 214 acres and are all situated in the Talaghaut Talooks. Their details are given in Statement No. 91, and though the proportion of waste to cultivation shews that some of the inferior grades also may require relief, the Board think with the Collector that the consideration of this point can be left to the approaching Survey.

Cauvery Channel.—30. The Fysul lands under this important irrigation are detailed in Statement No. 84. The Fysul and Ileevur comprize an area of 3,721 acres assess-

Para. 71. ed at Rupees 44,022 of which 3,500 are in cultivation, and Mr. Brett considers that no measures of relief are now called for. In para. 20 of their Proceedings of

31st January 1856, the Board adverted to the steady cultivation of these lands which have been rendered valuable by the modifications* made by Mr. Hargrave in their Survey assessment and by the expense incurred by Government in maintaining the channels. The Board therefore continue of opinion that until the Survey leads to an accurate remodelment of the assessment of the District, no change in the present rates is necessary. It will be observed from Statement 84 that but a small portion of land is assessed higher than Rupees 16 per acre, and this assessment carries immunity from any charge for a second crop.

*See Bd's. Pro. 17th May 1856, No. 1503.

31. There is one class of Nunjah land in these 12 Talooks which remains to be noticed, viz. the Nunjah *under Wells.* This land is distinct from the Nunjah Bagayet which term designates Nunjah land irrigated by Channels or Tanks, but on which valuable fruit trees &c. are grown instead of rice crops. The Nunjah under wells differs in no respect as to irrigation from Poonjah Well Gardens, and the Collector was therefore ordered by Government to modify its assessment in a similar manner. The Total Iyacut (Fysul and Ileevur) consists of 4, 771 acres assessed at Rupees 26,748, and the result of dealing with this land "in the mode prescribed for Well Gardens" is a reduction of Rupess 5,275 on the cultivation, and of Rupess 2,712 on the Waste. The uncultivated area which is looked to as a future set off to this loss consists of 1,269 acres bearing a modified assessment of Rupees 5,452.

See para. 73 of Report and Stat. No. 103.

Balaghat Talooks.—32. The Nunjah lands of these two Talooks are shewn in the Statements Nos. 92 to 99. The total Iyacut consists of 8,610 acres assessed at Rupees 46,022, of which 5,507 acres were under cultivation in Fusly 1262. In the assessment of these talooks the Tanks and the Channels were each divided into 4 classes, and the rates of assessment varied in all the 5 classes of Villages according to this distinction in the quality of the irrigation. The highest tarum assessment for 1st class irrigation is only Rupees 8-12-0 per acre, and Mr. Brett limits his recommendation as in the case of the Poonjah lands, to striking off the additions which have since been made to the Survey Assessment. This would lead to a total reduction of Rupees 767, Rupees 404 being on the cultivation and Rupees 363 on the waste. The Board concur in this arrangement and also support the Collector's recommendation in para. 79 for striking off a small sum of Rupees 9 imposed as Extra Assessment on some Nunjah land under Wells in these two talooks.

Gardens.—33. It has been observed that the Poonjah Well Gardens have been already disposed of, but two descriptions of Garden cultivation remain to be dealt with, viz. Poonjah Bagayet under Tanks and Channels, and Nunjah Bagayet.

Poonjah Bagayet.—34. The Poonjah Bagayet is found in the eight Talaghaut Talooks only, and, in correction of entry in para. 81 of the report, the Board find from Statements 100, 101, and 102, that its details are as follows:

Irrigation.	Iyacut.		Cultivation of Fusly 1262.		Waste.	
	Acres.	Rupees.	Acres.	Rupees.	Acres.	Rupees.
Tanks.....	312	1,807	171	1,033	141	774
Channels.....	388	2,176	231	1,348	157	828
Cauvery Channels.....	1468	6,477	885	3,586	583	2,891
Total...	2168	10,460	1287	5,967	881	4,493

In E. M. C. 11th April 1856, No. 372, para. 15, Government directed that this land should be brought under the head of Nunjah and treated accordingly. Mr. Brett therefore shews in para. 83 what the result of this measure would be, but as the marginal entry to that para. gives the area of the Poonjah Bayget as 3,944 acres although the Cauvery Channel lands are not included, the Board presume that the great difference this entry and Statements 100 and 101 arises from the former including both Fysul and Ileevur lands, and the latter Fysul lands only. By modifying the assessment of this land in the manner recommended for the Nunjah by Mr. Brett, the reduction on the cultivation would be Rupees 424, and on the waste Rupees 542. If the Board's modification of the Collector's scheme, as detailed in para. 29 of these Proceedings is approved, the reduction will be somewhat less, but its exact amount cannot be given from the want of details regarding the Ileevur lands. Under the explanation given in para. 84, the Board concur in the propriety of not extending the reduction at present to the Cauvery Channel lands which can be transferred to the head of Nunjah with their present assessment.

In Con. 28th April 1856.

Nunjah Bagayet.—35. The Nunjah Bagayet consists of chiefly of Cocoanut and Betelnut trees on Nunjah and also on Poonjah land irrigated from tanks and channels. In accordance with the reformatory principles which have been already sanctioned and promulgated these lands have to be taxed simply as Nunjah, and the additional Garden Assessment whether in the shape of teerwah jasty or a tree tax has to be struck off. This measure will cause a reduction of Rupees 5,151-6-2 in the Talaghaut and Baramahal talooks as shown in Cols. 6 and 8 of Statement No. 107. In the Balaghat Talooks land (whether registered as Nunjah or Poonjah) has been charged with 1st class Nunjah Assessment when planted with Cocoanut and Betelnut trees. The teerwah jasty thus levied for "Nunjah Garden cultivation" is shown in column 7 of Statement No. 104 to have amounted in Fusly 1267 to Rupees 942. Mr. Brett recommends the abolition of this charge in the case of *future* plantations, but proposes to retain it on the present gardens. The latter part of this recommendation is based, the Board presume, on the rule which reduces the Nunjah Assessment to the 1st class Poonjah rate on the remaining portion of a field when its entire area is not occupied with Nunjah Garden cultivation. But this course would retain in the Accounts the item of Nunjah Garden which it is so advisable to get rid of both now and in future. The Board will therefore instruct the Collector, in accordance with the directions given by Government when reviewing the Tope and Tree taxation, to levy an ordinary and suitable Nunjah Assessment on all those fields which are supplied with irrigation and are now charged with Rupees 942 on account of Nunjah Garden Teerwa Jasty.

E. M. C. 6th March 1859, No. 298.

P. 91.

E. M. C. 6th March 1858, No. 298 p. 5.

36. The following is a resumé of the reductions which the Board have thus recommended.

	Reduction on Cultivation.	Reduction on Waste.	Available Waste at modified rates.
	Rupees.	Rupees.	Rupees.

	5,575	542	4,549
Manawary.....	82	165	452
Grand Total...	1,03,776	91,342	7,40,283

31st January 1856, the Board adverted to the steady cultivation of these lands which have been rendered valuable by the modifications* made by Mr. Hargrave in their Survey assessment and by the expense incurred by Government in maintaining the channels. The Board therefore continue of opinion that until the Survey leads to an accurate remodelment of the assessment of the District, no change in the present rates is necessary. It will be observed from Statement 84 that but a small portion of land is assessed higher than Rupees 16 per acre, and this assessment carries immunity from any charge for a second crop.

*See Bd's. Pro. 17th May 1856, No. 1503.

31. There is one class of Nunjah land in these 12 Talooks which remains to be noticed, viz. the Nunjah *under Wells.* This land is distinct from the Nunjah Bagayet which term designates Nunjah land irrigated by Channels or Tanks, but on which valuable fruit trees &c. are grown instead of rice crops. The Nunjah under wells differs in no respect as to irrigation from Poonjah Well Gardens, and the Collector was therefore ordered by Government to modify its assessment in a similar manner. The Total Iyacut (Fysul and Ileevur) consists of 4, 771 acres assessed at Rupees. 26,748, and the result of dealing with this land "in the mode prescribed for Well Gardens" is a reduction of Rupess 5,275 on the cultivation, and of Rupess 2,712 on the Waste. The uncultivated area which is looked to as a future set off to this loss consists of 1,269 acres bearing a modified assessment of Rupees 5,452.

See para. 73 of Report and Stat. No. 103.

Balaghat Talooks.—32. The Nunjah lands of these two Talooks are shewn in the Statements Nos. 92 to 99. The total Iyacut consists of 8,610 acres assessed at Rupees 46,022, of which 5,507 acres were under cultivation in Fusly 1262. In the assessment of these talooks the Tanks and the Channels were each divided into 4 classes, and the rates of assessment varied in all the 5 classes of Villages according to this distinction in the quality of the irrigation. The highest tarum assessment for 1st class irrigation is only Rupees 8-12-0 per acre, and Mr. Brett limits his recommendation as in the case of the Poonjah lands, to striking off the additions which have since been made to the Survey Assessment. This would lead to a total reduction of Rupees 767, Rupees 404 being on the cultivation and Rupees 363 on the waste. The Board concur in this arrangement and also support the Collector's recommendation in para. 79 for striking off a small sum of Rupees 9 imposed as Extra Assessment on some Nunjah land under Wells in these two talooks.

Gardens.—33. It has been observed that the Poonjah Well Gardens have been already disposed of, but two descriptions of Garden cultivation remain to be dealt with, viz. Poonjah Bagayet under Tanks and Channels, and Nunjah Bagayet.

Poonjah Bagayet.—34. The Poonjah Bagayet is found in the eight Talaghaut Talooks only, and, in correction of entry in para. 81 of the report, the Board find from Statements 100, 101, and 102, that its details are as follows:

Irrigation.	Iyacut.		Cultivation of Fusly 1262.		Waste.	
	Acres.	Rupees.	Acres.	Rupees.	Acres.	Rupees.
Tanks.....	312	1,807	171	1,033	141	774
Channels.....	388	2,176	231	1,348	157	828
Cauvery Channels.....	1468	6,477	885	3,586	583	2,891
Total...	2168	10,460	1287	5,967	881	4,493

In E. M. C. 11th April 1856, No. 372, para. 15, Government directed that this land should be brought under the head of Nunjah and treated accordingly. Mr. Brett therefore shews in para. 83 what the result of this measure would be, but as the marginal entry to that para. gives the area of the Poonjah Bayget as 3,944 acres although the Cauvery Channel lands are not included, the Board presume that the great difference this entry and Statements 100 and 101 arises from the former including both Fysul and Ileevur lands, and the latter Fysul lands only. By modifying the assessment of this land in the manner recommended for the Nunjah by Mr. Brett, the reduction on the cultivation would be Rupees 424, and on the waste Rupees 542. If the Board's modification of the Collector's scheme, as detailed in para. 29 of these Proceedings is approved, the reduction will be somewhat less, but its exact amount cannot be given from the want of details regarding the Ileevur lands. Under the explanation given in para. 84, the Board concur in the propriety of not extending the reduction at present to the Cauvery Channel lands which can be transferred to the head of Nunjah with their present assessment.

In Con. 28th April 1856.

Nunjah Bagayet.—35. The Nunjah Bagayet consists of chiefly of Cocoanut and Betelnut trees on Nunjah and also on Poonjah land irrigated from tanks and channels. In accordance with the reformatory principles which have been already sanctioned and promulgated these lands have to be taxed simply as Nunjah, and the additional Garden Assessment whether in the shape of teerwah jasty or a tree tax has to be struck off. This measure will cause a reduction of Rupees 5,151-6-2 in the Talaghaut and Baramahal talooks as shown in Cols. 6 and 8 of Statement No. 107. In the Balaghat Talooks land (whether registered as Nunjah or Poonjah) has been charged with 1st class Nunjah Assessment when planted with Cocoanut and Betelnut trees. The teerwah jasty thus levied for "Nunjah Garden cultivation" is shown in column 7 of Statement No. 104 to have amounted in Fusly 1267 to Rupees 942. Mr. Brett recommends the abolition of this charge in the case of *future* plantations, but proposes to retain it on the present gardens. The latter part of this recommendation is based, the Board presume, on the rule which reduces the Nunjah Assessment to the 1st class Poonjah rate on the remaining portion of a field when its entire area is not occupied with Nunjah Garden cultivation. But this course would retain in the Accounts the item of Nunjah Garden which it is so advisable to get rid of both now and in future. The Board will therefore instruct the Collector, in accordance with the directions given by Government when reviewing the Tope and Tree taxation, to levy an ordinary and suitable Nunjah Assessment on all those fields which are supplied with irrigation and are now charged with Rupees 942 on account of Nunjah Garden Teerwa Jasty.

	5,575	542	4,549
Manawary.....	82	165	452
Grand Total...	1,03,776	91,342	7,40,283

Brett, unless the careful enquiry which will be made during the approaching Survey shews such a measure to be necessary.

14. Having made these remarks on the Collector's scheme of reductions, the Board proceed to consider the question whether it is advisable to do more than continue the temporary relief of 12½ per cent. granted by Government to the superior soils, now that the District is to have the benefit of the Survey at an early date.

15. On this point it is to be remarked—1st, that the Survey will fortunately commence not only in the Talaghaut Division, but in the most highly assessed portion of it, viz. Captain Macleod's talooks which skirt the South Arcot District.—2d. That the reduction of 12½ per cent. granted in Fusly 1265* has already been followed by a marked increase of cultivation, thus shewing that it has had considerable success in attaining the object in view.—3d. That the prices of agricultural produce have risen so greatly as to improve the condition of the ryots in a marked manner.—4th. That no new information has been supplied to shew the actual productiveness and value of the lands. They have been arranged in the Collector's Statements "according to certain rates of assessment." "Their real quality" Mr. Brett observes in p. 34 "is merely inferred from those rates." Under these circumstances the Board are of opinion that no new and elaborate scheme for revising the assessment is requisite pending the Survey, or could be attempted with safety, and that it is advisable to abstain at present from making any arrangements which would alter the existing classifications of the land. At the same time it seems desirable to make use of the Statements forwarded by the Collector for still further facilitating, temporarily, the spread of cultivation. The arrangements which the Board would propose for this purpose are as follows:—

* *Poonjah cultivation and Beriz of 8 Talaghaut talooks.*

	Acres.	*Rs.*	
1256	284,755	4,79,081	
1257	289,015	4,85,498	
1258	307,502	5,15,725	*The remission of 12½ per cent. is not included in this Beriz, and amounted as follows:*
1259	288,893	4,84,811	
1260	295,210	4,93,428	
1261	297,350	4,95,165	
1262	301,853	5,03,793	
1263	295,509	4,95,610	
1264	313,458	5,67,068	
1265	345,643	5,35,788	56,038
1266	398,758	6,31,128	62,111
1267	404,391	6,43,080	64,331

I. A reduction of 18 per cent. on all lands from the highest grade to Rupees 3 per Acre.

II. A further reduction on the higher grades of the above lands to bring their Assessment down to Rupees 6, where it still exceeds that rate.

III. Lands now assessed at Rupees 3 and downwards to Rupees 1¼ to be allowed a reduction of 15 per cent.

The Board intend all the above reductions to apply equally to cultivated and Waste lands.

They have already given their reasons for making Rupees 6 the maximum Poonjah Assessment in para. 9 of these Proceedings.

The rate of the reduction in the 1st part of their scheme corresponds with that proposed by the Collector for cultivated lands and falls below their own former recommendation of 25 per cent.

In proposing a larger reduction in the 2nd than in the 3rd part of their plan, the Board have kept in view the greater proportion which the Waste bears to the cultivation in the higher grades of the Poonjah Area.

If these arrangements are approved by Government, they could be brought into operation in the Settlement of Fusly 1268, with a notification that they will continue in force until the Survey, and are to supersede the temporary reduction of 12½ per cent. now allowed.

Their financial effects would be as follows:—

	Reduction on cultivation.	Reduction on Waste.	Available waste at the reduced rates.	
	Rupees.	Rupees.	Acres.	Rupees.
I. Reduction of 18 per cent. on all lands down to Rupees 3	11,152	14,657	19,691	64,703
II. Further reduction to bring the higher grades down to Rupees 6	836	2,067		
III. Reduction of 15 per cent. on all lands from Rupees 3 to Rupees 1¼	46,961	50,397	1,64,867	2,85,582
Total	58,949	67,121	1,84,558	3,50,285

The Board will here make a general remark that though the financial results given in these Proceedings are sufficiently near the truth for the information of Government they are not entirely exact, since if the reformatory measures recommended by them are approved, they propose to instruct the Collector in supersession of the course recommended by him in para. 95 to bring all the revised rates to multiples of a quarter Rupee in the manner laid down by Government for the Poonjah well gardens in Extract Minutes Consultation, 20th December 1855, No. 1372, para. 12.

4. *Baramahal Talooks.*

1 *Darampoory.* — *Munro.*

2 *Tengarikottah.*
3 *Kistnagherry (including Mallapaudy.)*
4 *Tripattore.*
— *Read and Graham.*

16. For these talooks Mr. Brett recommends the following measures of relief (p. 41.)

I. All the higher grades to be reduced to Rupees 4 per acre.

II. A reduction of 6¼ per cent. on the cultivation of all the grades from Rupees 4 to 1¼.

III. A reduction of 12½ per cent. on the waste of do.

The total Iyacut of these talooks consists of acres 4,57,820 assessed at Rupees 4,51,346. The immediate loss of revenue by Mr. Brett's plan would be Rupees 5,457, viz. Rupees 113 and 5,344 respectively in the first and second items, and there would be a reduction of Rupees 11,543 on the waste. The net assessment of the waste lands available for increasing the revenue after the reduction would be Rupees 1,97,518. It will be observed that in this instance the Collector has not proposed to reduce the assessment of the inferior grades.

17. It has been already shewn that in these Talooks the mean rate of Assessment per Acre is less than in the Talaghaut, and that the proportion which the cultivation bears to the Waste is more favorable. Under these circumstances the Board abstained from proposing any modification of Assessment in these Talooks until the Collector had submitted a detailed report, and they are now of opinion that it will be sufficient, pending the survey, to make Rupees 6 the maximum Poonjah rate, and to grant a reduction of 6¼ per cent. on all the higher grades down to lands paying Rupees 1¼ per Acre. But they propose for the reasons already given to apply this reduction equally to the cultivation and Waste, instead of allowing a reduction of 12 per cent. to the latter as recommended by Mr. Brett. The only change made in the Financial results of the Collector's scheme by this modification would be to diminish the reduction on the Waste by one-half, as the land now assessed at more than Rupees 6 does not exceed 12 Acres.

Balaghat.—18. The two Balaghat Talooks of Denkencottah and Ossoor remain to be considered. They were assessed in 1802 by Mr. D. Cockburn, on a different principle to what was followed in the rest of the District. The Villages were divided into three classes, each of which had five rates of Poonjah Assessment, varying from a maximum of Rupees 2-4-0 per Acre in the first class to a minimum of 6 Annas in the third class. But in the year which followed the Survey, these Tarum rates were occasionally increased by an addition of what is termed the

P. 48—52.

In one or two minor points the figures in this Statement are an approximation rather than a precisely accurate account, but the financial results approach so closely to exactness as to be a safe guide. In Fusly 1262, which being an average year was taken as the basis of Mr. Brett's Statements, the net Ryotwary Beriz of the Salem District was Rs. 14,26,011, so that the reductions recommended on the Cultivation amount to 7 per cent.

37. Some Miscellaneous points are next adverted to by Mr. Brett, the first of which is the formation of the proposed Road fund. Mr. Brett had suggested the levy of a fixed cess per acre, but on Government observing that "it will distribute the burden more equally to vary the rate in proportion to the amount "of revenue paid rather than to the extent of land occupied" he now proposes the annual levy of a rate of* four pice in the Rupee, and recommends that this cess should be deducted from the original assessment, in cases where that assessment has not been reduced. But an arrangement of this nature leads to great labour by requiring every year minute calculations to ascertain what each ryot has to pay, after which the amount has to be entered in every Puttah. The Board therefore request authority for levying the fund on the plan which Government sanctioned in South Arcot. The two per cent. would then be amalgamated with tne Teerwah of those lands which have had their assessment modified, and on the settlement of each village being finished, two per cent. would be deducted from its Beriz for the Road fund, the accounts being adjusted by an entry of the amount under this head, in the Statement of remissions No. 4. By following this course a single operation suffices for the Road fund of each village and much calulation and writing are saved.

P. 94.

* *Or 2 per cent. as ordered in E. M. C. 15th February* 1858, *No.* 191, *p.* 29.

P. 69.

38. Mr. Brett next alludes to the remission allowed to Brahmin and Mahommed an cultivators under the local name of "Sookhavasy." At the Survey Colonel Reid allowed an abatement of 20 per cent. to these cultivators though in some villages local usage has made the reduction smaller. Some of the original Sookhavasy families have disappeared and the indulgence is not now allowed to new parties of the classes entitled to it except when they take up immemorial waste and cultivate it with their own ploughs and cattle. In consequence of attention to the rule that the Sookhavasy remission is not to be allowed when a Brahmin or Mahommedan ryots rents out his land to other parties for cultivation, the total remission on this account in Fusly 1267, was only Rupees 750. Mr. Brett proposes to abolish this item of remission on Government sanctioning the proposed modification of the Survey assessment, and the Board support this recommendation in accordandce with the practice which has been pursued in other districts under similar circumstances.

Report of 4th April 1800, *ps.* 169 *and* 171.

Hookumnamah rule 41.

Paras. 97 *and* 98.

39. Mr. Brett proposes as another reform the entire abolition of the Cowle system, representing that it leads to a needless sacrifice of revenue by tempting the people from the full assessed lands and that it is unnecessary "to remit any portion of the tax even for a temporary period to induce people to extend cultivation when the demand for produce calls for it." Mr. Brett here confuses the use and abuse of Cowles. Without plunging into the past revenue history† of Salem on this point, the Revenue Board, as at present constituted, are opposed to the plan of moderating the effects of an over high assessment by granting Cowles; they are alive to the ill consequences which must flow from such a measure, and consider that the proper course is to reduce the assessment to a just level. But there are occasions on which Cowles may be granted with advantage to the State and the Community, such as for clearing land from forest or Nutt grass, or for encouraging plantations of treec on unassessed lands. The Board are not therefore prepared to recommend the total abolition of Cowles, though in future they should of course only be granted in Salem for the above legitimate purposes. With respect to existing Cowles granted for *assessed* lands which had been some time waste, it will be the duty of the Collector to endeavour to effect their cancelment by some equitable and amicable arrangement with the Cowledars if

† *A summary of the discussions on this subject is given in Dyke's Salem, commencing at page* 285.

Government sanction the modifications of the assessment now proposed. On learning that a permanent reduction of assessment was about to be granted, the Cowledars would often be willing to resign the temporary benefit of their Cowles, to secure at once this boon, as they would doubtlessly see that they could not expect or claim *both* advantages.

40. It only remains for the Board to request sanction for the sum of Rupees 719-5-4 expended under the authority of Government in employing extra servants to prepare the Statements which accompanied the Collector's Report--some details of this outlay are given in Statement No. 108.

Para. 201.

(A true Extract.)

(Signed) J. D. SIM, *Secretary.*

No. 2. ORDER THEREON, 11th May 1859, No. 648.

On the 11th April 1856, the Government reviewed a scheme sent up by the Board of Revenue for temporary reductions of Assessment on the Nunjah and Poonjah lands of the Salem District. The scheme, which was devised by the Board and did not emanate from the Collector, was not approved by Government; the information supplied being found too scanty to furnish materials for a judgment. But the Government pointed out what statistical details they required, and the form in which they desired to have them,* and they hoped to receive them at an early date. Meanwhile, they had for that year only (Fusly 1265) sanctioned a remission of 12½ per cent. on all Poonjah land assessed at above Rupee 1-5-4 an acre, in the eight low country Talooks.† This reduction was afterwards, at the Board's request, continued for Fusly 1266,‡ a hope being expressed by Government at the same time that the Collector's report would soon be before them, and it has apparently been continued to the present time by the Collector.

E. M. C. April 11, 1856, *para.* 7.

* *Idem, para.* 9.

† *Order February* 19*th* 1856, *No.* 190.

‡ *Order November* 10*th* 1856, *No.* 1193.

2. The Board now send up the information called for, with their opinion. The order of Government intended that forty Statements should be submitted, for the most part in similar forms, for Nunjah and Poonjah lands respectively, in the several talooks and divisions. But the Collector prepared no fewer than 107, to suit as he says various existing minor sub-divisions both of Territory and of Revenue settlement. The Board however do not go into these tables in detail. They are of opinion that as the Revenue Survey and Settlement are now to be immediately undertaken in Salem, it is inexpedient to introduce changes which were properly contemplated when those operations were thought to be many years distant.§ They propose therefore that no change shall be made now, except to introduce some temporary modifications, similar in their nature to those sanctioned in 1856, but more general and more discriminating. The Government fully concur in the views of the Board on this point; and they proceed now to consider and pass orders in detail on the Board's recommendations.

§ *Para.* 3.

The Poonjah land.

3. The Board begin with the Poonjah, or unirrigated land, and take first that of the eight low country Talooks. In para. 8 they give Mr. Brett's plan for those lands; which with its estimated financial effect, is as follows:

	Reduction in the cultivation.	Reduction on the waste.	Available waste at the reduced rates.
1. Land both cultivated and waste assessed at above 5 Rupees an acre to be reduced to 4 Rupees	4,217	6,779	11,356
2. 8¾ per cent. reduction on cultivated land assessed at 1½ Rupee to 4¼ Rupees	76,432	...	...
3. 31½ per cent. on waste at the above rates	...	1,37,272	3,02,000
4. 6¼ per cent. reduction on all land assessed at less than 1¼ Rupee	5,491	4,877	73,154
Total ...	86,142	1,48,928	3,86,510

It thus appears that the whole immediate sacrifice of revenue under these arrangements will be Rupees 1,06,493 ; but the Assessment of available waste is nearly nine lacks, on a large part of which material reductions have been made. It may reasonably be expected therefore that the sacrifice will be quite temporary, and that ultimately the Revenue will gain.

15. The Governor in Council approves of the proposal to form a road fund by a cess on all lands on which the Assessment is reduced; but they prefer the Collector's plan to that of the Board. The latter propose to adopt a plan similar to that followed in South Arcot, where one anna a cawny is levied ; but the objection to that is its inequality. The Governor in Council considers Mr. Brett's plan preferable, being that adopted in North Arcot and Bellary, viz. to proportion the road rate to the land Assessment. Under this plan the road rate is not incorporated in the land Assessment, which course the Government consider objectionable, but the amount is calculated by a very easy process and is noted at the foot of each puttah. In North Arcot and Bellary the road rate is 2 per cent. ; Mr. Brett proposes 3 pice in the rupee, which is almost exactly equivalent to 2 per cent., and the Government approve and sanction his proposal.

The bandy tax now existing for local purposes in Salem will be continued for the present ; ultimately when the road rate is extended to all the land in the District as it will be at the Survey Settlement, that tax may probably be properly discontinued.

16. The favorable rates of Assessment allowed to certain classes of ryots will be discontinued, as recommended by the Board in para. 38.

As respects cowles for cultivation, the Government are of opinion that under a moderate assessment they will very rarely be necessary ; but so long as granted *bona fide* only for the three legitimate purposes enumerated by the Board, they will be unobjectionable. Of those three objects it is to be observed that the terms of giving land for planting trees are laid down in the tope rules ;* that it is believed there is no nutt grass in Salem ; and that though the clearing of forest land is a legitimate occasion for cowle, yet generally such cowles should not be given so long as there is open land available in the neighbourhood. It is desirable that rules for the granting of such land on cowle should be established.

* *Rule IV. see page 444 of the Board's C. O. Book, Vol. I.*

17. The reductions and other arrangements sanctioned and directed in this order will come into effect in the approaching Fusly 1269; no reason appears for putting them in force in the settlement of the current fusly, now in course of formation, as the ryots had no reason to expect such indulgence this year. Due care should be taken by the Collector to make the intended reductions universally known throughout the district without delay ; and this may be done easily and completely by means of the District Press.

18. In conclusion, the Governor in Council sanctions the sum of Rupees (719-5-4) seven hundred and nineteen, annas five and pice four expended on extra servants employed in preparing the accounts necessary to enable the Collector to make his report.

(Signed) J. D. BOURDILLON,
Secretary to Government.

Extract from the Proceed-
-ings of the Board of
Revenue-

(Here enter 19th March 1859
No 949)

On the 11th April
1856, the Government re-
-viewed a scheme sent up
by the Board of Revenue
for temporary reductions
of assessment on the
Nunjah and Ponjah
lands of the Salem Dis-
-trict- The scheme, which
was devised by the Board
and did not emanate
from the Collector, was

not

not approved by Govt.,
the information supp-
-plied being found too
scanty to furnish ma-
-terials for a judgement.
But the Govt. pointed
out what statistical
details they required,
and the form in which
they desired to have
them and hoped to receive
them at an early date.
Meanwhile they had
for that year only (Fasly 1265)
sanctioned a remission
of 12½ per cent on
all Ponjah lands as-
-sessed at above Rupee
1-8-4 an acre, in the
eight low Country Talooks.
This reduction
was afterwards,
at the Boards request,
continued to
both orders should be
passed on the Collectors
expected

to the present time by the Cons.

expected report.

2. The Board now send up the information called for, with their opinion. The order of Govt intended that forty statements should be submitted, for the most part in similar Forms, for ~~the~~ Punjah and ponjah lands respectively, in the several Talooks and divisions. But the Collectors prepared no fewer than 107, to suit as they say various existing minor sub-divisions both of territory and of Revenue settlement. The Board however do not go into these Tables in detail. They are of opinion that as the Revenue Survey and settlement are now to be immediately under-
-taken

-latives in Salem, it is inexpedient to introduce changes which were properly contemplated when those operations were thought to be many years distant. They propose therefore that no change shall be made now, except to introduce some temporary modifications, similar in their nature to those sanctioned in 1856, but more general and more discriminating. The Government fully concur with the views of the Board on this point, and they proceed now to consider and pass orders in detail on the Board's recommendations.

[3] Para 3.

The Ponjab Land.

3 The Board begin with the Ponjab or irrigated land, and take first that of the eight low Country Talooks in Para 8 they give Mr Britt plan for the ~~Ponjab~~ lands, or those ~~Talooks~~, which with its estimated financial effect, is as follows.

Reduction on the Cultivation.	Reduction on the waste	Available waste at the reduced Rate
1 Land both cultivated and waste assessed at above 5 Rupees an acre to be reduced to 4 Rupees	4,217	6,779	1,356
2. 8 3/4 per cent reduction on cultivated land assessed at 1 1/2 Rupee to 4/5 Rupee	76,432.	"	"
3. 31/2 per cent on waste at the above rates	"	137,272.	302,000
4. 6 1/2 per cent reduction on all land assessed at less than 1 1/4 Rupee	5,491	4,877	7,514
Total	86,142	148,928	386,570

4 In remarking on this

this plain the Board ex
press (Para 9) that 4 Rup-
pees is too low as the high
-est Payable rate- But in
these remarks
they fall into a mistake
from failing to distinguish
between the Cawny and the
Acre- The rates of 6 and 4
rupees there referred to as
approved by Government
for North Arcot, were per
Cawny not per acre- The
rate of 4 Rs an acre proposed
by Mr Brett as the highest
payable rate in Salem is equal
to about Rs 5. 4 - 8 a Cawny.
and the Governor in Coun-
-cil is not of opinion that
this rate is too low for a max-
-imum- It must be remem-
-bered that the old garden land
in Salem has already been
separately provided for, and
is not included in the pre-
-sent statement, though some
expressions in Para 9 of

The

+ Order of Govt 20 Decr 20/55
No 1572

× Paras 10 to 12

5 The Board differ
also from the Collector in
considering it inexpedient
to make any difference in the
rate of reduction on cultivated
and on waste land×. This is
the same opinion which the
Government expressed before,—
though they did not then —
insist on it in opposition to
the Board's views; they still
return it, and dissent therefore
from the third part of Mr
Brett's scheme.

6 They agree with
the Board also in dissenting
from the last part of that
scheme; considering it unnece-
-sary to give any immediate
reduction on the very lowly
assessed land. Mr Brett argues
that where the same proportion
of the gross produce is made the
basis of the assessment on

all

all soils bad and good, the bad must necessarily be the most heavily taxed. The argument is good in theory, but it is nevertheless at variance with the notorious fact that in every District, under the operation of the rule objected to, the best lands are the most heavily taxed, and most in need of relief. The explanation of this state of things probably is that the rule was not rigidly applied.

7 In para 15 the Board propose, in accordance with their previous remarks, a scheme for the eight low country Talooks in supersession of the Collector's plan and the Government approve that scheme in general; but for the reasons above stated they consider some modifications expedient, and they resolve to

to substitute the following.

I A reduction of 18¾ per cent (or 3 Annas in the rupee) on all land now assessed at three rupees and above.

II A further reduction so as to bring down to four rupees all assessments still above that rate.

III A reduction of 12½ per cent (or 2 Annas in the rupee) on land assessed at 1¼ Rupee and below 3 rupees.

IV These reductions shall include those temporarily allowed on the 19th February 1856.

V The mode of classification adopted in the case of Garden to be followed; but as the rates are lower, the gradation to be by two annas instead of by quarter rupees. That is to say, after the reduction above ordered in each case, the remainder shall be brought, by addition or further reduction as the case may be

Order December 20th/55
Para 12.

to

to the nearest multiple of two annas.

VII The Reductions under rules I & III shall be partially applied to the rates immediately below the limit, so that no such rate shall remain higher than it would have been if it had been above the limit; in other words no existing rate under 3 rupees shall under the new rules be higher than Rs 2 - As 8 - ; and no existing rate under 1/4 shall be higher than Rs 1 - As 2.

8 For the four talooks of the Baramahal the Board propose a plan differing from that of Mr. Brett in that it reduces alike on the waste and the cultivation, and that it makes 6 rupees the highest rate instead of 4 Rupees. For the reasons above given, the Government substitute the following

Paras 16 & 17.

Paras 18 & 19.

Para 30

15

following modification of that plan.

I A Reduction of 6 1/4 per cent on all land now assessed at 1/4 rupee and above.

II A further reduction of assessments still above 4 Rupees to reduce them to that amount.

III Rules V & VI of Para 7 to be adopted here also.

For the two Talooks 9 of the Bulaghaut the Governor in Council approves the plan proposed by the Collector and concurred in by the Board, Viz. to strike off the additional impost laid on in the case of certain lands, under the term "dead anna" subsequently to the first assessment by Mr. Cockburn.

The Sunjah land. Both the Board and 10 the Collector consider that no reduction is necessary at present in the case of the lands watered by the Cauvery channels

the excessive assessments of which were reduced some years ago. The Governor in Council concurs in this opinion.

11 With the remainder of the Ummjah land the Board propose to deal on similar principles to those recommended for the Poonjah; but the rate of reduction proposed is smaller, because these lands are not so greatly over assessed. They agree with the Collector in making the same rates of reduction applicable to the Ummjah of all the twelve Talooks exclusive of the Balaghaut, and the Government concur in this plan; it is true that lands of the Baramahal Talooks seem to need reduction less than those of the Talaghaut Talooks, but under the operation in fact of the rules they will receive less.

The

Report Para 67.

The Board's scheme for the Ummjah lands both Fysul and Jillevar in those twelve Talooks is given in Para 28 of their Proceedings. It differs from the Collector's plan in that it reduces on the cultivation and the waste alike, and that it reduces on the higher lands at a larger rate than on the lower. The Governor in Council approves these changes, as in the case of the Poonjah land; and he sanctions the Board's scheme with a slight modification, viz. that of substituting 12½ and 6¼ as the percentages of reduction, instead of 12 and 8, with the view of simplifying and facilitating the deduction

deduction to the cumums
and as being probably
sufficient.

12 The plan thus
modified will be as
follows

I A reduction of 12½ per-
cent on all lands assessed at
9 Rupees and above.

II A further reduction so as
to bring down to 6¼ Rupees all
rates still above that amount

III A reduction of 6¼ per-
cent on lands assessed at 5
Rupees and under 9

IV The mode of classifica-
tion adopted in the case of the
garden land to be followed. See
Para 12 of the order December 20th
1855 No 1372

V The principle of Rule VI in
Para 7 above, to be attended to in
making these reductions.

13 The Nánavári Para 29
land, or that on which

an

an inferior species of
rice is grown without
irrigation, should be
treated as Poonjah, as
has been done in other
Districts, and be brought
under the rules given
above in Para 7.

Nunjah land water-
ed by wells has al-
ready been dealt
with under the order
of Government of April
11th 36, according to the
same
rules as well garden-

The Government
concur in the small
reduction proposed by
the Collector and
approved by the Board
(Para 32) on the Nunjah
land of the Balaghaut
Talooks

The Government
also approve and sanc-
tion the course proposed
by

by the Board in Paras 34 and 35, in the case of Punjah and Poonjah Bagayet, and of land in the Balaghaut Taloo is planted with coconut and betle nut trees.

14 The following Table gives a general view of the reductions now ordered as nearly as the amounts can be computed.

		Reduction on Cultivation	Reduction on Waste	Available Waste and unclassified waste
		Rupees	Rupees	Rupees
Poonjah -	Talaghaut	62,771	7,680	4,63,758
	Baramahal	5,511	5,979	2,03,082
	Balaghat	2,494	1171	60,678
		70,776	78,830	7,27,518
Punjah -	Talaghaut and Baramahal	24,251	13,111	1,21,162
	Balaghat	404	363	19,319
		24,655	13,474	1,40481
Punjah under wells.	Talaghaut & Baramahal	5275	2712	5,452
	Balaghat	9	"	54
		5,284	2,712	5,506
Poonjah Bagayet under tanks and Channels		424	542	4,549
Punjah - Bagayet		5,151	"	"
		5,575	542	4,549
Manawary		203	303	314
	Grand Total	106,493	95,861	8,78,368

At thus appears that the whole immediate sacrifice of revenue under these arrangements will be Rupees 10,493; but the assessment of available waste is nearly nine lacks, on a large part of which material reductions have been made. It may reasonably be expected therefore that the sacrifice will be quite temporary, and that ultimately the Revenue will gain.

15 The Governor in Council approves of the proposal to form a road fund by a cess on all lands on which the assessment is reduced, but they prefer the Collector's plan to that of the Board. The latter proposes to adopt a plan similar to that followed in South Arcot, where one anna a cawny is levied but the objection to that is its inequality. The Governor in Council considers Mr. Britt's plan preferable, being that adopted in North Arcot and Bellary, viz to proportion the road rate to the land assessment. Under this plan the road rate is not

not incorporated in
the land assessment,
which course the Govern-
ment consider objectionable,
but the amount is
calculated by a very
easy process and is
noted at the foot of
each putteah. In North
Arcot and Bellary the
road rate is 2 per cent.
Mr Bretts proposes 3
fice in the rupee, which
is almost exactly =
equivalent to 2 per =
cent, and the Govern-
ment approve and
sanction his propo-
=sal.

16 The bandy tax now existing for local purposes in Salem will be continued for the present; although when the road rate is extended to all the land in the District as it will be at the Survey settlement, that tax may probably be properly discontinued.

The favorable
rates of assessment
allowed to certain
classes of Ryots will be

be discontinued,
as recommended
by the Board in
Para 38.

As respects un-
cooled for cultivation
the Government
are of opinion that
under a moderate
assessment they
will very rarely
be necessary, =
but so long as =
granted bonafide
only for the three
legitimate purpo-
-ses enumerated
by the Board,

they

they will be un
objectionable. Of
those three objects
it is to be observed
that the terms of
giving land for plant
ing trees are laid
down in the topes
rules; that it is
believed there is
no nutt grass in
Salem; and that
though the clearing
of forest land is a
legitimate occasion
for cowle, yet gene-
rally such cowles
should not be given
so long as there is
open

+ Rule IV. See
* Page 444 of the 1st
C.O. Book, vol. I.

open land available
in the neighbourhood
It is desirable that
rules for the granting
of such land on cowle
should be established
17 The reductions and
other arrangements
sanctioned and direct-
ed in this order will
come into effect in the
approaching Fusly 1216
no reason appears for
putting them in force
in the settlement of
the current fusly, now
in course of formation,
as the Ryots had no
reason to expect such
indulgence this year.
Due care should be
taken by the Collector
to make the intended
reductions

reductions universally known throughout the District without delay, and this may be done easily and completely by means of the District Press.

18 In conclusion the Governor in Council sanctions the sum of Rupees 719-5-4, 14 pended on extra servants employed in preparing the accounts necessary to enable the Collector to make his Report.

Sir,

1. With reference to paras 8 and 9 of Extract from Minutes of Consultation, under date the 11th April 1856, No. 372, I have the honor to submit certain statements, showing the total extent of arable lands in the Salem District, under the two heads Poonjah and Nunjah, arranged in classes according to certain rates of assessment, with the cultivation and the waste in each class. A list of the statements is annexed to this Report.

2. In the Minutes of Consultation above referred to, the Government took into consideration an Extract from the Proceedings of the Board of Revenue, dated the 31st January 1856, No. 319, submitting, with the Board's observations, certain reports and letters from my Office, relative to the high rates of assessment on the Nunjah and Poonjah lands of the Salem District; and detailing the measures of relief which the Board recommended for reduction.

3. The Government remarked that they were unable to give their assent to the Board's plan for reducing the assessment "in the absence of the detailed Statistical information necessary both to prove its "necessity, and to display its probable financial effect."

4. The statements now submitted have been prepared according to the forms referred to in para 9 of the above Minutes of Consultation, tho' for reasons which will be explained, the number of them is much greater than what the Government thought would be required.

5. The Salem District at present consists of 14 Talooks, of which 8 are comprised in the Talaghaut Division, 4 in the Baramahl Division and 2 in the Balaghaut Division. When the original Survey was made the District, which did not at that time include the Balaghaut Talooks, was divided into 3 Divisions the Northern or Graham's, the centre or Munro's, and the Southern or McLeod's.

6. The Poonjah Statements for the 12 Talooks, forming the Talaghaut and the Baramahl Divisions, are 26 in number viz., *12 for 12 Talooks, †1 for the Jagheer of Mallapady, a Division of the Kistnagherry Talook, ‡7 for parts of Talooks which were not included as entire Talooks in any one Division, ‖4 for the three Divisions Southern, Middle, and Northern, § one for the 8 Talooks forming the present Talaghaut Division, and ¶ one for the 4 Talooks forming the Baramahl Division. For the original 3 Divisons 4 statements have been prepared instead of 3, because the Northern Division was settled partly by Colonel Read, and partly by Captain Graham. A list is given in the margin* showing what Talooks, or what parts of existing Talooks, were included in the several Divisions.

*Nos. 1 to 12.
†No. 13.
‡Nos. 14 to 20.
‖Nos. 21 to 24,
§ No. 25.
¶ No. 26.

Southern or Captain McLeod's Division.

1	Ahtoor.
1	Salem.
1	Raizipoor.
1	Nameul.
1	Paramutty.
½	Trichengode (part.)
5½	

Centre or Colonel Munro's Division.

1	Womalore.
½	Darampoory (part.)
⅓	Tengericottah (part.)
1	Senkerrydroog.
½	Trichengode (part.)
⅓	

†Nos. 27 to 35.

7. The Poonjah statements for the 2 Balaghaut Talooks are 9† in number. The Poonjah lands in each of these Talooks have been divided into 3 classes, and therefore there are 3 statements for each Talook There are also 3 statements for each class in the 2 Talooks united.

Northern Division—
- Colonel Read: ½ Tengericottah (part.), 1 Tripatore- = 1½
- Captain Graham: ½ Darampoory (part.), ½ Tengericottah (part.), 1 Kistnagherry (exclusive of Mullapady-), 1 Mullapady Jagheer. = 2 5-16ths
- = 13 inclusive of the Mullapady Jagheer.

8. These statements have been prepared in order to show with some degree of accuracy the present condition of the Assessment, the effect of the Assessment in keeping lands waste, especially superior lands, and the general financial result of any changes that may be proposed.

Vide para: 8 Extract Minutes Consultation No. 372.

9. I will, in the first instance, refer to the information which the Poonjah Statements furnish, with regard to the Talaghaut and the Baramahl Divisions.

10. Subjoined are two Abstract Statements,* the one showing in each of the 3 Divisions, the Cultivation and the waste divided into 5 grades, the proportion between the two, and the proportion which the lands comprised in each grade bear to the total Ayacut; the other giving similar particulars for the same portion of the District, divided into the Talaghaut and the Baramahl Divisions.

	Total...	457,820	451,346	255,569	242,285	56	54	100	100	
	Grand Total...	1,060,589	1,495,152	557,693	750,653					

The whole quantity of lands included in these Divisions, cultivated and waste, amounts to Acres 1,060,589 viz.

Under cultivation	557,693
Waste not exceeding 10 years	198,891
Do. above 10 years	304,005
Total...	1,060,589

11. It appears from the first of the two Statements that in the 3 divisions the proportion of cultivation to waste is as follows:

	Acres.	Per cent.
Southern containing	3,51,340	49
Centre „	4,61,041	50
Northern „	2,48,208	63½

In the Southern division, as already surmised, the rates of assessment are in general higher than in the other two divisions. There is no great difference as to the total extent of waste between the Southern and Centre, but between them and the Northern there is a considerable difference in favor of the latter. In the same statement the lands contained in each division have been divided into 5 classes, in order to show whether the higher assessed lands are in equal proportion to the lower in each division. On this point there is a striking difference between the 3 divisions. In the Southern division, the lands under 2 Rupees form 70 per cent of the whole; in the Centre, 84 per cent; in the Northern, 93 per cent. It therefore appears that the rates are generally higher in the Southern than in the other two divisions. The mean rate per Acre in each is as follows.

	Rs.	As.	P.
Southern	1	12	3
Centre	1	5	7
Northern	1	"	4

12. It is likewise seen on examining the second of the two abstract statements that the lands assessed under 2 Rupees in the Baramahl are 95 per cent of the total Ayacut, against 71 per cent in the Talaghaut Talooks. This statement therefore tends to prove that in all the southern Talooks (8), the

assessment is higher than the assessment in the Baramahl. Whether the rates are higher or not relatively with the quality of the lands has yet to be considered.

13. The southern Talooks as they exist at present comprise the entire Southern division (5½ Talooks) and part of the Centre division, viz. the present Talooks of Womalore and Shenkerrydroog, with half of Trichengode. In the subjoined abstract statement the lands in these two Talooks and a half of a Talook are divided into 5 grades, as in the other two statements.

	1 and under 2.	17,971	27,517	10,093	15,060	7,878	12,457	56	55	44	45	72	65	
	Under 1	1,605	1,356	1,179	988	426	368	61	73	27	27	6	3	
	Total...	25,090	42,224	13,717	21,844	11,373	20,380	55	52	45	48	198	100	

In each Talook the lands assessed under 2 Rupees bear to the whole extent the following proportions,

In Shenkerrydroog.....74 per cent.
Womalore..... 69 per cent.
Part of Trichengode..... 78 per cent.

It is therefore apparent that in these 2½ Talooks the higher assessed lands bear a greater proportion to the lower than in the Baramahl, where the same higher grades form only 5 per cent of the total ayacut.

14. The fact that higher rates prevail in the Southern division has been ascribed to some want of judgment on the part of Captain Mc. Leod; but it might, I think, be inferred with more justice that all the lands below the Topoor pass (the 8 southern Talooks) were considered more fertile than the lands in the Baramahl, and that on this ground they were, in general, assessed as higher classed lands. In the present day, the Baramahl lands are considered poorer than the southern. This point may be admitted. and yet ample reason may be shewn for reducing the present rates.

15. The Statements prepared according to the Government forms exhibit a large proportion of waste in every grade. That so much waste should exist in every grade is owing no doubt to over-assessment, lands of the better quality and lands of inferior quality were both over assessed, but in the two cases distinct causes can be assigned for the over assessment.

16. I will deal first with the lands of inferior quality. Colonel Read was of opinion that for all soils the Government share should amount to ⅓ of the gross produce. Referring to the practice of the native Governments he* observed, that half the produce was always taken as the Government share. In another place he states that an equal division of the crops between the Ryot and the Circar, exclusive of certain perquisites allowed to Village servants, was the rule observed over all India; the half share being "sufficient for the cultivator's maintenance and expenses of cultivation." Under his own assessment the share allowed Government was ⅓ of the dry and ⅔ths of the wet crop.

* Para. 166 of the Report. Vide Para 178 of the report Para 190

17. It might seem from certain parts of the report that he intended, when calculating the Government share, to proportion it in an increasing ratio to the quality of the soil; but, after a very careful study of the Report, I feel quite satisfied that ⅓ was considered the proper Government share for every gradation of soil. It was only in exceptional cases when the soil was held to be "very rich," or "very poor," that his surveyors were authorized to vary the proportional rate, unless indeed some variation was allowed for certain temporary and incidental causes connected with the Ryot's stock or other circumstances of that kind.

‖ Para 185

18. To dispel any doubt on this point, I subjoin a statement, containing in the two first columns a scale which Colonel Read prepared for the use of his surveyors, "answering," as he describes it, "to every gradation of the soil within the supposed possibility of estimating the produce." In this scale the several money rates in the 3d column bear to the corresponding grades, 17 in number, in the 2d column one uniform ratio of ⅓.

Para 193

Scale of rates shewing the proportion received by the Ryot under certain specified rates of Assessment.

19. The scheme of assessing every variety of soil at the same proportional rate was favourable to the better classes of lands, but unfavourable to the lower classes. Its natural effect on the inferior qualities was to throw them out of cultivation, for the lower classes of lands could not possibly pay each one the average rate paid by the whole.

20. If several classes of land varying in quality were under cultivation, the lands in one only of those classes would, according to the law which regulates the employment of capital and labor, be just sufficiently productive to cover the cost of production, neither more nor less, after deducting the Government share of one third. If other lands inferior in quality to that one were cultivated at the same time, their produce would, at current prices, be insufficient to cover the cost of production and the tax of one third.

21. On the other hand, if the same proportional share be levied on lands which, in different gradations, exceed in fertility that single class which is just productive enough, at current prices, to cover the cost of production, and to give Government ⅓ of the gross produce, it is evident, that the Ryot's share will be sufficient, not only to cover the cost of production, but to give him a surplus, increasing in a corresponding ratio with the fertility of the soil.

22. This point is placed in a clear light in the statement annexed to para 18 of this Report. In that statement it is assumed that the grade 75 per cent below the highest grade (No. 11 in the scale), yields a gross produce which will exactly cover the cost of production, and will give Government a share of $\frac{1}{3}$. Column 3 exhibits the Government share in each grade, calculated at $\frac{1}{3}$ i. e. at the rate given by Colonel Read. Column 6, shews the ryots profit or loss in each class, after deducting the cost of production. It will be seen that all the rates above No. 11 give to the Ryot a surplus, after paying both the cost of production and the Government share. The ryot's share in all the rates below No. 11 is below the cost of production; diminishing in proportion as the grades exhibited in column No. 2 decrease in quality. Column 6 also shews that the superior lands continually increase in value to the Ryot, so long as the share taken by the Government is an uniform rate of $\frac{1}{3}$ on the gross produce, whatever that gross produce may be.

Assumed to be Rupees 47-4-8.

23. In column 7 I have given certain rates, according to which the Government might have assessed the higher lands, and yet have left a surplus to the Ryot. The gross produce is shewn in column 8; the Government share in column 9; the Ryots share, including the cost of production (fixed at Rupees 47-4-8) in column 10; the surplus, after deducting the cost of production, in column 11.

Calculated with reference to column 3.

24. In all the 10 rates, there is an increasing surplus remaining to the ryot, though the Government share in the 1st class is as high as Rupees 48-5-4 per cent, or nearly $\frac{1}{2}$ instead of $\frac{1}{3}$. It is therefore evident that a number of soils varying in quality will never secure to the Government a share of $\frac{1}{3}$, and at the same time leave to the ryot neither more nor less than the cost of production. It is but a single quality of land that will give exactly those proportions, and that quality must be the *worst* quality which the current price of produce will allow the ryot to cultivate, so as to give him the ordinary return for his labour. The proprietors of the superior lands obtain an excess of produce (or rent) from their lands as the necessary result of their greater fertility.

MacCulloch.

25. A tax on rent, properly so called, cannot affect prices. I here use the term rent as signifying that "portion of the produce which is paid by the farmer to the "land-lord for the use of the natural and inherent powers of the soil"; that is "the difference between "the amount of the produce obtained from the superior lands, and the amount of the produce obtained "from the worst quality under cultivation."

26. The Government tax laid on the land owner, when it bears a uniform proportion to the produce, is a tax on the gross produce which proportionately raises the price of produce. There is no *absolute necessity* that such a tax should be collected from the owner of the land. It might be levied on the produce when brought to market. Nor is it necessary, in order to ensure a certain extent of cultivation, that the uniform proportion paid to the Government should bear any certain ratio to the gross produce. If the Government fixed their share at one half instead of one third, a certain quantity of land must still be cultivated; i. e. as much land as would be required to meet the effectual demand for produce. The public would have to pay enhanced prices to cover the cost of producing so much of the necessary supply as the cultivator provided under the most unfavourable circumstances. In other words, if his share of one half instead of one third be inadequate to cover the cost of production, he must be paid accordingly.

27. Whether the gross produce, or only the land lord's rent, is the proper object for taxation, or, whether both ought to be taxed, are distinct questions which I have not discussed in the foregoing remarks. I have aimed at distinguishing the several objects of a land assessment the one from the other, because a right understanding on that point will throw considerable light on the present state of the assessment in this District.

28. My remarks on Colonel Read's plan of assessment have been confined, as yet, to points connected with his mode of dividing the produce. I have not referred to the rates at which the produce was commuted for money rents. Colonel Read adopted a single rate for Poonjah lands throughout the whole 12 Talooks, and a single rate for Nunjah land. In the former case, the rate was Rupees 5-5-2. In the latter Rupees 5-8-7, per candy. No doubt, this uniform rate has an unequal effect in some places. It is not to be supposed that the cultivators of the land always incur equal expenses in bringing their produce to market. The rate, therefore, in many cases might have been too low for the land nearest a good market, or too high for the land remote from a good market.

29. It is impossible at the present day to ascertain which of the 17 classes was capable in Colonel Read's time of paying the cost of production and no more. Though this class is unknown, the fact that all lands, of every quality, were assessed at a uniform ratio, is enough to raise a presumption that all the waste lands exceeding it in fertility were wrongly *classed* by the Subordinates employed in the survey. It cannot be that the Government share bore too high a proportion in any given class. Though prices may have since risen, the same reasoning will apply at the present time to the same grades, or to any of them in which a large proportion of waste exists. Until lately, prices have always been unfavorable compared with the prices at the survey.

30. 2ndly, The probability that the over assessment is great increases as the grades ascend, for the Government might* have taken a much larger proportion of the produce than $\frac{1}{3}$d from the superior lands, and yet those lands could have been cultivated at a profit, if no mistake had been made regarding their real quality.

* As exemplified in the Statement annexed to para. 18.

31. 3dly; If it be proved that the Surveyors were so often in error with regard to one class (i. e., the waste,) it is fair to assume that they also made great mistakes, though not equally great mistakes, in respect to the lands under cultivation. Their mistakes could not have been so great in the latter case, or the lands would not be cultivated. In this point of view cause is shewn for making a reduction in both the cultivated and the waste, though not for making a uniform reduction on both. In passing, I may point out that this evidence, showing that half the lands in the District are lying waste through errors made in determining the quality of the lands, affords a strong argument in favor of a new survey.

32. 4thly, Whether the lands inferior to the one which only paid the cost of production and the $\frac{1}{3}$d Government share were wrongly classed or not, as to their actual quality, it is clear that the assessment of $\frac{1}{3}$d is more than they could pay. Such lands could not be cultivated except the ratio between the Government share and the ryot's share were less than $\frac{1}{3}$d, and decreasing as the lands decrease in quality. If lands so classed have not been thrown out of cultivation, it must be assumed that their real quality was under rated.

33. 5thly, The fact, that lands are frequently saleable in this District, does not prove that the lands are in general rightly assessed; for any assessment, however high, provided it bears a uniform ratio to the whole produce, would not affect the sale of lands exceeding in fertility the worst quality under cultivation.

34. I now proceed to explain the measures which the foregoing facts and reasoning would seem to warrant. The information supplied by the Government statements is of a general nature. The lands are arranged in these statements according to certain rates of assessment. Their real quality is merely inferred from those rates. It is therefore impossible to adjust any measures that may now be proposed for remedying the defects in the assessment with the same success as a survey would allow of, though not, I trust, impossible to find a partial remedy, which will at least improve the revenue, and at the same time, by throwing open more land, be beneficial to the people.

35. The most obvious course is to reduce the Assessment on the waste lands. I have already given reasons for making a reduction, both on the cultivated and the waste. I have also explained on what grounds I think an equal reduction on both is not necessary. I do not recommend that the same extent of reduction be made in the Talaghaut and the Baramahl Talooks, though in both Divisions some reduction is called for. My reason for making this distinction must be explained. It is shewn in Paras 12 and 13 that there is much more land under high rates in the Talaghaut Talooks than in the Baramahl. It is probable that the quality of the lands in the Talaghaut Talooks was, in general, over rated to a greater extent than the lands in the Baramahl; and, lastly, it is generally admitted that a Rupee an acre is a very light assessment for lands of a tolerable quality. This was the common opinion before prices rose to their present height. In the Baramahl the lands under that rate are 61 per cent of the whole extent. Vide statement in Para 10. I therefore think it proper to recommend a less extent of reduction in this division, though, in the proportion between cultivated and waste, there is no great difference in the two Divisions.

36. Some explanation is likewise necessary with regard to the low rate of reduction on the grades under $1\frac{1}{4}$ Rupee. Though I have maintained in this Report that lands of inferior quality require an assess-

ment below the average rate to retain them in cultivation, it is, I think, advisable, under present circumstances, to guard against the very low class lands coming into competition with the large quantity of better qualities, which, under the reductions actually made, will be available for cultivation. It is not necessary to prove that inferior lands, if disproportionately assessed, may be cultivated at a greater profit by the cultivator than lands of better quality, though there can be no such advantage in any case to the revenue. It ought to be better for the Ryot, as it must be for the Government, that he should cultivate the lands of superior quality.

37. In discussing Colonel Read's scheme, so far as it related to the inferior lands, I had in view only the lands of that kind which were under cultivation at the time of the survey. In the event of a new survey, it would be an important question how *waste* lands of the lower qualities ought to be treated. Some one class, as already stated, must at the current prices of the day yield the Government share (fixed at pleasure) and the actual cost of production, neither more nor less. If, after that starting point be found, low waste classes should be assessed at a proportionally lower share to secure their cultivation, it would injuriously affect the classes already cultivated ; for its effect would be to lower prices, from its increasing the supply of produce at a time when the lands under cultivation were already adequate to meet the demand. The next higher land must be thrown out of cultivation. The difference in the tax is therefore needlessly sacrificed. The benefit to the consumer is not permanent, for a fall in prices, produced by a mistaken application of labour, cannot be permanent. The better course, therefore, is, at such a time, to assess the waste inferior classes at a uniform rate, and to let the cultivation of them at a future period depend on that natural law, which, in countries where the land is not taxed, secures the gradual cultivation of inferior soils. The same principle ought to be followed, as far as possible, at the present day. The proper object to aim at is to relieve those classes which would, but for an ill-regulated tax, be cultivated first.

38. If, at any future time., there should be a permanent rise in prices, consequent on a permanent increase in the demand for agricultural produce, and its natural effect an increase in the cost of production, the inferior classes would commence to yield rent properly so called. The Government would then have it in their power to raise an additional revenue in a way which need not affect prices, nor throw any lands out of cultivation. I mean, by taxing the land lord's rent, and yet leaving him a share.

39. I will conclude these remarks by pointing out that any officer, who may hereafter be employed to revise the assessment in this District, will, at the commencement of his operations, be in a different position from that in which Colonel Read stood. He will start with the ascertained fact, that all agricultural produce has been liable for many years past to a certain fixed tax. He will at once assume that cultivated land of the worst quality is taxed at $\frac{1}{3}$ its gross produce. With regard to all other classes under cultivation he will know that they are superior in quality to the one above named, and, consequently, that each class is capable of paying, at current prices, $\frac{1}{3}$, and more, as the Government share. Colonel Read had no such fixed point to start from. Though the Government share was in former times, as now, a tax on the gross produce, and not merely a tax on rent, it is probable that much land of inferior quality was taxed at low proportional rates, under the erroneous idea that it would serve both the Government and the people, if, by such means, the cultivation of inferior soils could be encouraged. If such inferior lands were under cultivation at the time of the survey, Colonel Read was called upon in justice to existing interests to follow the same principle in assessing them. This was, under actual circumstances, the proper course, whether he followed it or not. At the present time, no lands which do not pay $\frac{1}{3}$ (with the few exceptions his surveyors were permitted to make) are under cultivation. Nor is it, as I have already observed, expedient that any measures should be taken to force the cultivation of such lands.

40. In the Talaghaut Talooks, I propose,

First, to reduce all the grades, cultivated and waste, from 5 and upwards, to 4 Rupees, an acre.

Secondly, to reduce the cultivated lands, in the grades ranging from $4\frac{1}{2}$ to $1\frac{1}{4}$, $18\frac{3}{4}$ per cent.

Thirdly, to reduce the waste in the last named grades $31\frac{1}{4}$ per cent.

Fourthly, to reduce all the grades, cultivated and waste, under $1\frac{1}{4}$ Rupees, $6\frac{1}{4}$ per cent.

41. In the Baramahl Talooks,

First, to reduce all the grades, cultivated and waste, from $4\frac{1}{2}$ to 4.

Secondly, to reduce the grades from 4 to $1\frac{1}{4}$ under cultivation, $6\frac{1}{4}$ per cent.

Thirdly, to reduce the waste under the same grades, $12\frac{1}{2}$ per cent.

I do not recommend that any reduction be made in the rates below $1\frac{1}{4}$ in this Division.

NOTE.—I do not make any distinction between cultivated and waste in the grades from 5 and upwards, because the reduction in that instance is not a uniform proportional reduction. I make no reduction in the lowest classes because I think it inadvisable to offer a premium for the cultivation of inferior soils.

42. In Colonel Read's scale, the highest rate allowed for Poonjah lands was Rupees 9.12-0 an acre. In the Government Forms, there are two rates above that sum. The land included in those two rates in the 12 Talooks is acres 148, of which 78 per cent is waste. This, therefore, was the extent to which the surveyors departed from the rates given in Colonel Read's scale.

43. The actual loss incurred in reducing the 1st 5 grades in the Talaghaut Talooks to 4 Rupees, would be Rupees 4,217 ; which is equal to a reduction of 33 per cent on the cultivated portion. If, at the rate of 4 Rupees all the waste lands in the same grades should hereafter be cultivated, the revenue they would yield would amount to Rupees 11,356 ; which would give an increased revenue of Rupees 7,139, after deducting present loss.

44. In proposing 4 Rupees as the highest rate, I reckon that the Government share would amount to about $\frac{3}{4}$ of the gross produce, at the prices which prevailed in fusly 1262.

45. The actual loss incurred in reducing the cultivated lands, ranging from $4\frac{1}{2}$ to $1\frac{1}{4}$, $18\frac{3}{4}$ per cent, and the cultivated lands under $1\frac{1}{4}$ $6\frac{1}{4}$ per cent, would amount, in the one case, to Rupees 76,432, in the other, to Rupees 5,491, total Rupees 81,923. The total reduction on the waste in the 2 cases would amount to Rupees 1,42,150.

46. In the Baramahl Talooks, the actual loss incurred in reducing the first 6 grades to 4 Rupees would be Rupees 330, which is equal to a reduction of 1 per cent on the cultivated portion. If , at the rate of 4 Rupees, all the waste lands in the same grades should hereafter be cultivated, the revenue they would yield would amount to Rupees 736.

47. The actual loss incurred from reducing, at the rate of $6\frac{1}{2}$ per cent, the cultivated lands, ranging from $4\frac{1}{2}$ to $1\frac{1}{4}$, would amount to Rupees 5,344. The reduction on the waste lands in the same grades, at $12\frac{1}{2}$ per cent, would be Rupees 11,326.

The total reduction in the 12 Talooks would be, as follows.

On the cultivated lands reduced to 4 Rupees	4,330.
On Do. in the grades ranging from $4\frac{1}{2}$ to $1\frac{1}{4}$	81,776.
Do. Do. in the grades under $1\frac{1}{4}$	5,491.
Total	91,597.
On the uncultivated lands reduced to 4 Rupees	6,996.
On Do. in the grades ranging from $4\frac{1}{2}$ to $1\frac{1}{4}$ Rupees	1,48,599.
On Do. in the grades under $1\frac{1}{4}$	4,877.
Total	1,60,472.
Grand Total	2,52,069.

Nos. 105 and 106. I have prepared two statements shewing these reductions in detail. These Statements are entered in the list.

48. I now turn to the Balaghaut Talooks. These 2 Talooks were assessed in 1802 by Mr. David Cockburn. The villages were formed into 3 classes, and the Poonjah lands in each village into 5 classes as shewn below.

Villages.	Lands.														
	1st Class.			2d Class.			3d Class.			4th Class.			5th Class.		
	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.	Rs.	A.	P.
1st Class Village	2	4	0	1	14	0	1	8	0	1	0	0	0	8	0
2d do. do.	1	14	0	1	8	0	1	0	0	0	12	0	0	8	0
3d do. do.	1	8	0	1	2	0	0	14	0	0	10	0	0	6	0

49. The lands in these two Talooks have been classed in the statements in the same way as the lands in the other parts of the District. This was necessary because, in numerous instances, the Taram rates no longer exist. Two or three causes are alleged for this fact. The next year after the survey the Taram rates were raised in many cases by an addition of what is termed the Deed Anna assessment. In others, they were raised by a discretionary addition, which it seems did not bear any regulated proportion to the survey rate. The rates were thus raised because the survey assessment was found to be lower than the assessment levied by the Mysore Sultan. Again, the Taram rates have been disregarded in the case of lands assessed subsequent to the survey. These several causes have made it impossible for me to prepare the statements according to the survey classes.

50. "Deed," signifies one and a half. The "Deed Anna" rate is 1½ anna in the Rupee, or 9 Rs. 6 annas per cent. Though, as already stated, the additions were not always made at this rate, every excess has been included under this term in the statements. The statements exhibit the "Deed Anna" assessment separated from the Taram rates. It amounts on the cultivated lands, in the two Talooks together, to Rupees 2,494.

51. It appears that in both Talooks, the proportion of cultivated to waste, in all 3 classes, is, on the whole, much larger than the same proportion in the other Talooks. The actual quantity of land assessed above the highest Taram rate in the 1st class villages, viz., 2 Rupees 4 annas, both Talooks included, is very small. It amounts to Rupees 3,770. Of this, Rupees 1,311 is waste. In the second class villages, the quantity of land assessed above the first Taram rate, viz., Rupees 1-14, is Rupees 3,562. In the 3d class villages,* the same quantity is Rupees 4,361, If the rates on these lands were severally reduced to the first Taram rates in each class, the actual loss would be Rupees 1,013. The total amount of "Deed Anna" given up on the cultivated land will be Rupees 587. I recommend that this measure should be adopted. The Deed Anna assessment on such of the cultivated and waste lands as are not included in the above reduction amounts to 2,147. I recommend that the whole of this item should be abolished. In that case, the sum remitted includes the extra rates imposed on those lands which in the statement bear a higher assessment than the 1st class rates; and secondly, the extra rates on lands which bear in the statements (survey rates and additional rates inclusive) a lower assessment than 1st class rates.

* 1st Taram rate Rs. 1-8.

52. The Nunjah statements for the 12 Talooks are 58 in number, viz., * 24 for 12 Talooks, † 2 for the Jagheer of Mullapady, a division of the Kistnagherry Talook, ‡ 14 for parts of Talooks which were not included as entire Talooks in any one division, § 4 for the three divisions, Southern, Centre, and Northern, ‖ 2 for the 8 Talooks in the Talaghaut Division, ¶ 2 for the 4 Talooks in the Baramahl Division, * 1 for the Cavery channels, † 1 for Nunjah lands under wells, 6 for Ileewar Nunjah, viz., ‡ 2 for the Talaghaut, § 2 for the Baramahl, ‖1 for wells in the two Divisions united, and ¶ 1 for Mannavary Nunjah. The lands in each are divided into grades according to the Government forms. In most instances there are 2 statements for each Talook, or other part, showing the cultivated and the waste under 2 different sources of irrigation, viz., tanks and channels.

* Nos. 36 to 59.
† Nos. 60 and 61.
‡ Nos. 62 to 75.
§ Nos. 76 to 79.
‖ Nos. 80 and 81.
¶ Nos. 82 and 83.
* No. 84.
† No. 85.
‡ Nos. 86 and 87.
§ Nos. 88 and 89.
‖ No. 90.
¶ No. 91.

53. The "Ileewar Nunjah" is land charged subsequent to the survey with Nunjah rates. It consists, partly, of unassessed waste, and, partly, of land originally assessed as Poonjah. "Manavary Nunjah" consists of lands on which Nunjah crops are raised from the falling rain only. All the above named statements are entered in the list annexed to this Report.

54. In order to arrive at any just conclusion, as to the effect of the original rates, it was considered absolutely necessary to prepare separate statements for the lands under Tanks and under channels, because at the survey Colonel Read fixed for different sources of irrigation different proportions for the Government share. I also thought it necessary to show separately the lands assessed subsequent to the survey. In this latter case, the statements exhibit only the aggregate cultivation in the divisions, and not the cultivation in each Talook. The "Manavary" for which there is only one statement is a very small quantity, which will in subsequent paras be treated along with the fysul Nunjah under Tanks and channels.

55. Land assessed subsequent to the survey have been assessed on different principles at different times. At one time, the assessment imposed on such land was the average assessment in the Village. The present practice is to charge waste lands with the assessment borne by adjacent lands of similar quality.

56. Colonel Read furnished his surveyors with a scale for Nunjah lands, in the same way as for Poonjah lands. The scale is subjoined.

COLONEL READ'S SCALE FOR NUNJAH LANDS.
Rate per Cawny of 2½ Acres.

* Para 184.

57. In this scale the several sources of irrigation are divided into 9 classes. The Government is allowed a different proportional share in each class. Colonel Read's Report* contains another statement, shewing what the variations are. This statement is given in the margin. The Nunjah lands in each class are divided into 12 grades. The several money rates bear in each grade a uniform proportion. Colonel Read's remarks* regarding the Poonjah scale apply equally to this scale.

* Vide Para 18 of this report.

58. In the 9 classes entered in the scale, tanks alone occupy 5 classes including 3 in which the lands are irrigated partly from Tanks, and partly from wells. In my statements, all 5 classes have been blended together, and included in one class He has divided the channels into 2 classes. In my statements there are one statement for the Cauvery channels exclusively, and one for all the other channels. The Nunjah under wells is all included in a single statement. I have added to the scale given above an average (column 10) formed the 5 classes under Tanks and an average (column 14) formed from the 2 classes into which wells were divided.

A. B. and C.

59. The three abstract statements* subjoined exhibit the Nunjah lands (fysul) under Tanks and under channels, divided into 3 grades, 1st for the 3 original Divisions, and 2nd for the Talaghaut and the Baramahl Divisions. They show the proportion between the cultivated and the waste in each grade, and the proportion which the Ayacut in each grade bears to the total Ayacut.

A.—Nunjah (Fysul.)

Abstract Statement shewing the cultivation and the waste, divided into 3 *grades, in the* 3 *Divisions Southern, Centre, and Northern.*

60. In the statement for the 3 Divisions, the lands under Tanks and channels are blended together. I have not thought it necessary, in this instance, to give a separate abstract statement for the 2½* Talooks, which with the Southern Division form, as already explained,* the 8 Southern Talooks, as they now exist. It seems already sufficiently clear that there is a difference in the rates prevailing in all the 8 Southern Talooks, compared with the rates prevailing in the Baramahl Talooks.

* Womalore Shenkerrydroog, and part of Trichengode.
* Para. 13.

61. The subjoined abstract statement relates to the "Ileewar Nunjah." This statement is drawn out on the same plan as the two statements, marked B. and C. annexed to Para, 59. It exhibits the cultivation and the waste, both under Tanks and under Channels, first for the Talaghat Division, and, secondly, for the Baramahl Division.

ABSTRACT—*Statement, shewing the Cultivation and the waste, divided into 3 grades, in the Talaghat and the Baramahl Division.*

62. The whole quantity of Nunjah lands (Fysul) under Tanks and channels, with Manavery Nunjah, cultivated and waste, in the 12 Talooks, is as follows :

Under Tanks.

	Acres	Total.
Cultivated	26,340	
Waste not exceeding 10 years	4,746	
Do. above 10 years	7,165	
		38,251

Under Channels.

Cultivated	10,114	
Waste not exceeding 10 years	1,503	
Do. above 10 years	2,692	14,309
Grand Total		52,560

Manavery Nunjah.

Cultivated	103	
Waste not exceeding 10 years	36	
Do. above 10 years	75	
Total Manavery		214

63. Abstract statement A., appended to para 59. proves that there is proportionately more land under high rates in the Southern Division, than in the Centre, or the Northern. Abstract statements B. and C. prove the same point with regard to the Talaghat Talooks, compared with the Baramahl. The proportion between the cultivated and the waste, in each of the 3 grades, is somewhat in favor of the Baramahl Division. The mean rate per acre in each of the two Divisions, is as follows :

	R. A. P.		R. A. P.
Talaghat	Tanks 8 6 4	Baramahl	Tanks 5 5 0
	Channels 9 3 0		Channels 6 5 1

64. The entire extent of lands assessed as Nunjah subsequent to the survey, cultivated and waste, in the 12 Talooks, is as follows :

Under Tanks.

	Acres	Total
Cultivated	5,228	
Waste not exceeding 10 years	535	
Do. above 10 years	540	
Total		6,303

Under Channels. Acres. Total

Cultivated	2,529	
Waste not exceeding 10 years	278	
Do. above 10 years	149	
		2,956
Grand Total		9,259

3 Under 5	21,244	78,904	15,852	59,031	0	59,031	5,392	19,873	0	19,873	0	0
Total	61,819	4,39,528	44,211	3,05,254	0	2,72,449	17,608	1,34,274	0	1,11,941	22,333	16

As in the case of the Fysul Nunjah, the lands assessed at the higher rates are greater* in proportion in the Talaghat Talooks, than in the Baramahl.

* Vide abstract statement appended to para 61.

65. It is evident that the Nunjah statements do not shew so large a proportion of waste as the Poonjah statements. Though this fact indicates that over Assessment may not be so general in the Nunjah lands, it is still apparent that a larger proportion of waste exists in each grade than would exist, if no errors had been made regarding the qualities of the lands.

66. My remarks relating to a fixed proportional share applied to Poonjah lands of different qualities, are equally applicable to Colonel Read's fixed proportion on Nunjah lands though the ratio should not be the same for every class of irrigation. In both cases, the Government statements, combined with the information obtained from Colonel Read's Report, lead to the same inferences 1st, that the lands are over assessed in many instances, 2ndly, that the main error was in over estimating the qualities of the lands.

67. To meet these defects, I recommend that a reduction be made on the Nunjah lands, Fysul, Ileewar, and Manavery. I do not think that the reduction need be so high for the Nunjah as for the Poonjah land. Nor, though I have shewn that higher rates prevail to some extent in the southern Talooks, do I think it necessary in this instance to recommend different rates of reduction for the two Divisions. I propose the following reduction for all the 12 Talooks ;

1st to reduce all the grades, cultivated and waste, from 16 and upwards, to 14 Rupees an acre.

2nd to reduce all the grades under cultivation, ranging from 5 and under 16, by 12½ per cent.

3rd to reduce the waste in the same grades, 18¾ per cent.

In this reduction is included both Fysul and Ileewar lands.

68. The actual loss to be incurred in reducing,

1st, the first 6 grades, cultivated to 14 Rupees ;

2ndly, in reducing all the grades under cultivation, from 5 and under 16, 12½ per cent would be for the first item, Rupees 4,702 for the 2nd item, Rupees 28,103, total Rupees 32,805. The loss from reducing the uncultivated land in the same grades would be Rupees 22,333, total Rupees 55,138. I have given in the margin a statement shewing these reductions in detail.

69. The "Manavery" does not form a separate class in the accounts. The Government may think it proper to class and assess the small quantity of land embraced in this item, viz. acres 214, assessed at Rupees 1,114, as Poonjah land. In that case, the loss of Revenue would be about Rupees 247. The rates for Manavery Nunjah have been reduced to the highest assessment (Rupees 4) now proposed for the Poonjah lands in the Talaghat Division, where this class of lands occurs. All the rates below 5 Rupees have been left untouched.

70. I have noticed above, all the Nunjah statements for the 12 Talooks, with two exceptions; viz the statement for the Cavery Channels, and the statement for "Nunjah under wells."

71. With regard to the Cavery channels, no reduction, I think, is required. The subjoined statement shews the total Ayacut, the cultivation and the waste, including Fysul lands and Ileewar lands.

	Ayacut.		Cultivation.		Waste.		Per centage of waste.	
	Extent Acres.	Assessment Rupees.	Extent Acres.	Assessment. Rupees.	Extent Acres.	Assessment. Rupees.	Extent Acres.	Assessment. Rupees.
1 Fysul	3,552	42,532	3,347	40,325	205	2207	6	5
2 Ileewar	169	1,490	153	1,362	16	128	9	9
Total	3,721	44,022	3,500	41,687	221	2335	6	5

It appears from the above statement, that the waste is only 6 per cent of the total Ayacut. The *No. 84. * statement in the Government form embraces only the "Fysul."

Nunjah under wells.

72. With regard to "Nunjah lands under wells," the subjoined abstract shews the total Ayacut, the cultivation and the waste, including Fysul lands and Ileewar lands, for the Talaghat and the Baramahl Talooks.

	Ayacut.		Cultivation.		Waste.	
	Extent Acres.	Assessment Rupees.	Extent Acres.	Assessment Rupees.	Extent Acres.	Assessment Rupees.
1 Fysul	3,702	21,389	2,524	13,730	1,178	7,659
2 Ileewar	1,069	5,359	978	4,854	91	505
Total	4,771	26,748	3,502	18,584	1,269	8,164

73. The Government in Para 15 of Extract from Minutes of Consultation under date the 11th April, 1858, No. 372, observed that the Collector might "be authorized to deal at once with this land in "the mode already prescribed for well gardens (Extract from Minutes of Consultation December the 20th) "in conformity with the suggestion in para 22 of his letter of April the † 14th" I proposed in that letter that these lands and the Poonjah garden lands already reduced should be subjected to the same reduction. I now submit a statement‡ shewing what a reduction made on this principle will amount to. The total extent under cultivation in Fusly 1262 was acres 3,502, assessed at Rupees 18,584. The loss of Revenue will amount to Rupees 5275. The waste lands in the same fusly were acres 1269, assessed at Rupees 8,164. The reduction on these lands will amount to Rupees 2,712. If, therefore, the waste lands be hereafter brought under cultivation, the revenue, from that source will amount to Rupees 5,452, which would give an increased revenue of Rupees 177, after deducting present loss. The statement in this case applies both to Fysul and Ileewar lands. It does not shew what would be the result if the reduced grades were brought to the nearest multiple of quarter of a Rupee. The loss would be small.

†No. 46.

‡No. 107, in the list appended to the report.

74. I now turn to the Nunjah lands in the two Balaghat Talooks, the two sources of irrigation, viz., Tanks and Annicuts, were divided into 4 classes, and the Nunjah lands under each class in 5 classes, in the following manner.

Sources of Irrigation.	Lands.									
	1st Class.		2d. Class.		3d Class.		4th Class.		5th Class.	
1st Class Tank or Annicut.	8	12 0	7	8 0	6	4 0	5	0 0	3	12 0
2d Do.	7	8 0	6	4 0	5	0 0	3	12 0	2	8 0
3d Do.	6	4 0	5	0 0	3	12 0	2	8 0	1	14 0
4th Do.	5	0 0	3	12 0	2	8 0	1	14 0	1	4 0

* Nos. 92 to 95.
† Nos. 96 to 99.
Note.—There are no first class annicuts in the Oossoor Talook. The first class Statement for channels relates to the Denkencottah Talook only.

75. The statements submitted for these Talooks are 8 in number, viz. *4 for lands under Tanks, and †4 for lands under channels. These statements are entered in the list.

76. As Tanks and annicuts were originally classed in the manner above shewn, it was necessary to prepare separate statements for each class of irrigation. The statements have been prepared according to the Government forms, because the survey rates have been disturbed, as well with the Nunjah as with the Poonjah lands, in these two Talooks.

77. It appears from the statements that the highest assessment in the two Talooks for Nunjah land under first class irrigation is only Rupees 8-12-0. Other rates, exceeding this, are shewn in the statements. This excess is owing to the additional assessment imposed subsequent to the survey. The nature of the additional assessment has been already explained in para 49 of this report. I recommended that all the lands assessed above the highest taram rate be reduced to the first taram rate in each class, and that the additional cess be struck off in the other cases. The reduction would amount to Rupees 173 on cultivation, and 358 on waste.

78. The "Ileewar Nunjah" under the same classes amounts to acres 1,293, assessed at Rupees 6,307. of this, Acres 782, assessed at Rupees 3,692, are cultivated; and Acres 511, assessed at Rupees 2,615, are waste. The reduction would amount to Rupees 10 on the cultivation and 5 on the waste. The additional assessment above the taram rates on the cultivated portion, amounts to Rupees 221. The loss in the aggregate including Fysul and Ileewar Nunjah, amounts to Rupees 767.

	Ayacut.		Cultivation.		Waste.		Percentage of waste.	
	Extent Acres.	Assessment Rupees.	Extent Acres.	Assessment Rupees.	Extent Acres.	Assessment.	Extent Acres.	Assessment Rupees.
1 Fysul.	1,780	8,284	1,056	4,619	724	3,665	41	44
2 Ileewar.	2,164	6,638	1,796	5,212	368	1,426	17	22
Total...	3,944	14,922	2,852	9,831	1,092	5,091	28	33

79. In both the Talooks of Oossoor and Denken cottah, there is a small quantity of land assessed at the survey as "Nunjah under wells," viz. Acres 47, assessed at Rupees 204. The extra assessment amounting to Rupees 9, may be struck off from these lands.

80. There are still two items to be noticed, viz, "Poonjah Bagayet lands under Tanks and channels," and "Nunjah Bagayet lands."

81. The total extent of Poonjah Bagayet cultivation, under Tanks and channels, in Fusly 1262, was acres 1,056, assessed at Rupees 4,619. The Government remarked * in regard to this description of land, that it would be proper to class it as Nunjah.

* Para 15 Extract M. Con. dated 11th April 1856 No. 372.

82. There are 3 statements for Poonjah Bagayet, viz. † No. 100. ‡ „ 101. § „ 102. † one for lands under Tanks, ‡ one for lands under channels, and § one for lands under Cavery channels. These statements have reference to the Talaghat Talooks only. There is no Poonjah Bagayet as a separate class in the Baramahl Talooks, nor in the Balaghat Talooks.

83. The abstract statement in the margin shews the total Ayacut, Fysul

Rate.	Ayacut.		Cultivation.								Waste.

and Ileewar, the cultivated and the waste. I recommend that these lands, excepting so much of them as belong to the Cavery channels, be reduced in the same way as other Nunjah lands. I shew in the margin the effect of this reduction. The actual loss on the cultivated lands would amount to Rupees 424. The reduction on waste lands to Rupees 542.

84. I do not include the Cavery channels, 1st because thehighest rate in this instance, viz. 8-2-5 is not high for Nunjah lands; 2ndly, because, there is reason to believe from measures at present in contemplation for improving the channel, that the means of irrigating the lands on which Poonjah Bagayet produce is now raised will be made more secure. The cultivated portion is 62 per cent of the whole ayacut.

85. With reference to para 4 of the Board's Postscript to their Proceedings, dated 31st January, 1856, No. 319, regarding the proposed reduction in the assesment on Nunjah garden lands,

* Quoted in Para 1 of this Report

and para 15 of Extract* from Minutes of consultation dated 11th April 1856, No. 372, reviewing the above Proceedings, I submit two statements the one† shewing the extent of land cultivated as

† No. 103.

Nunjah Bagayet, in the Talaghat and the Baramahl Divisions, in Fusly 1267, with the original survey assessment of

‡ No. 104.

the land, and the additional Bagayet assessment. The other‡ shewing the same particluars for the Balaghat Division.

86. Nunjah Bagayet produce consists chiefly of Cocoanut trees and Betel nut trees. In the Talaghat and the Baramahl Talooks, productive gardens in Nunjah lands were assessed at the survey, in some cases, at double the Nunjah rates. In other cases, a separate tax was imposed on the trees, instead of a double rate on the land. Productive gardens in Poonjah land (also classed as Nunjah Bagayet), were assessed at the average Nunjah rate in the village and either that rate was doubled or a separate tax was imposed on the trees. The tree tax varied from Annas 13-9 to Annas 2-6 on Coccanut trees, and from Annas 2-6 to 4 Pies on betelnut trees.

87. It appears from statement No. 103, that in the Talaghat and the Baramahl Talooks, the Nunjah lands assessed as Nunjah Bagayet in Fusly 1267, consisted of acres 554, the present assessment on the land is Rupees 4,113, the teerwajasty, Rupees 3,431, and the tree tax, Rupees 254, total Rupees 7,798 If the present assessment be deducted, the additional assessment (teerwahjasty and tree tax inclusive) will amount to Rupees 3,684.

88. In the same year, the Poonjah lands charged with Nunjah Bagayet assessment on the same principle as the Nunjah lands, amounted to acres 3,385, bearing a survey land assessment of Rupees 1,117. The teerwajasty was Rupees 1,055, and tree tax Rupees 251, Total of these two items Rupees 1,306. Total of the 3 items Rupees 2,423.

89. The Poonjah Bagayet lands charged with Nunjah Bagayet assessment was acres 29, yielding a total Revenue of Rupees 311, viz, Fysul assessment Rupees 150, teerwajasty Rupees 144, and tree tax Rupees 17.

90. The total Revenue from teerwajasty and tree tax, inclusive of Nunjah, Poonjah, and Poonjah garden land, amounted to Rupees 5,151. I now beg to recommend that these two items should be discontinued.

91. In the Balaghat Talooks, in Fusly 1217, the Nunjah land actually occupied with trees has been charged with the first class Nunjah assessment The remaining portion of the field, with the first class Poonjah rate- From Fusly 1217 Poonjah lands, when planted with the same trees, have been charged with the average Nunjah rate till the trees arrived at maturity; and afterwards, with the first class Nunjah rate.

92. The Nunjah Bagayet lands amounted in Fusly 1267 to acres 2,063, assessed at Rupees 13,825 viz., Fysul teerwa Rupees 12,883, and teerwajasty Rupees 942. In this instance, I do not recommend that the extra assessment, viz., Rupees 942, be struck off. With regard to future plantations, the practice of raising the assessment to 1st class rates ought to be abandoned.

93. All the items on which the Government proposed to reduce, or modify, the assessment have now been disposed of. A few miscellaneous points remain to be noticed.

* Para 20 Ex. Minutes Consultation dated 20th December 1855, No. 1372.

94. With regard to the proposed Road fund, the Government observe* that it would distribute the burden more equally to vary the rate in proportion to the amount of revenue paid, rather than to the extent of land occupied. In conformity with this view, I beg to suggest that a rate of 4 Pice in the Rupee, be collected for all descriptions of lands. In cases where the present assessment should not be reduced, the proposed rate might be deducted from the original assessment. The rate now proposed would yield on the total Beriz for fusly 1267 for Poonjah, Nunjah, and garden lands in the Amany portion of the District, Rupees 34,454 as the total amount of the fund.

95. I have not shewn what would be the financial result, if the Poonjah and Nunjah lands belonging to the different grades in the Government forms, were reduced by addition or deduction to the nearest multiples of $\frac{1}{4}$ of a Rupee. In lieu of this measure, I propose that all the lands falling under one grade in the statement; as for instance, the lands ranging from "3 to $3\frac{1}{4}$" in the Poonjah statements, be formed into one class, each class having a number corresponding with its place in the statements. Accordiug to this plan, there would be a variation in the rates contained in a single class, but the small range which these variations would have, would not materially affect the object for which it is proposed to divide the lands into such classes.

96. Hitherto a reduction has been made in this District on the Survey rates of assessment in favor of Bramins and Mahomedans. This reduction, termed "Sookhavasy," is at the rate of 20 per cent. Colonel Read explains that a reduction has been usually allowed to these two classes, because they "cannot on account of their religious tenets or condition in life, hold the plough themselves which obliges them to employ Soodras, or the cultivating class of the inhabitants." The system has its origin, I believe, in the mistaken notion that the Government tax never, in any case, allowed more to the cultivator as his share, than what was actually sufficient to cover the cost of production. Many means of livelihood are open to these two classes, which are not open to the common cultivator. In that respect, therefore, they are better off as members of the community than the lower class; and 2ndly, when, as residents of Villages, they form a portion of the agricultural class, they have been, and always will be able, through their superior influence, to obtain their full share of the better classs of lands, i. e. the lands which must yield more than the ordinary returns required by the actual cultivator. I therefore recommend that this privilege be no longer continued. The sum remitted on account of "Sookhavasy," in Fusly 1267 amounts to Rupees 750. This remission ought I think to merge in the general remissions.

97. I should be glad, at the same time, to see the entire system of cowle abolished. There is no good reason why the cultivation of waste lands should not be left to make its own way, on the principles referred to in Paras 37 and 38 of this report.

98 The temporary reduction on the assessment tempts the people from the full assessed lands; and secondly, there is no need to remit any portion of the tax, even for a temporary period, to induce people to extend cultivation when the demand for produce calls for it. "The cost of bringing waste land into a fit state for the plough," may properly be viewed as part of the increased cost at which inferior lands are brought into cultivation. The cowle system was in favour with the native Goverments because it enabled them to favor dependents. They also sought by such means to force cultivation. The amount remitted on cowle lands in Fusly 1267 was Rupees 88,364, a very needless sacrifice of Revenue. No time could be so convenient for abolishing this system than the time when a general reduction is made in the assessment I therefore hope the Government will, at least in this District, abolish it, as an experiment.

99. I subjoin a statement shewing the present prices of produce, compared with the prices which prevailed at the time it was first proposed to reduce the assessment. The rise in prices at the present time is on the average 143 per cent for Poonjah and 158 per cent for the Nunjah produce on the prices prevailing in Fusly 1262 and 60 per cent and 83 per cent, respectively, on the commutation rates.

Description of grain.	Commutation price.	Average price per garce in Fusly 1262.	Average price per garce in Fusly 1267.	Increase of the price of Fusly 1267 above the Commutation rates.	Increase of the prices of Fusly 1267 above those of Fusly 1262.	Percentage between columns 2 and 5.	Per centage between columns 3 and 6.

100. It is uncertain at present to what this rise is owing. It is coincident in this District with increased cultivation, which fact tends to reduce prices temporarily. The last three years, however, have been bad years, so that extended cultivation has not been accompanied with proportionate increase in produce.

101. I also beg to subjoin an abstract statement, shewing the extent of cultivation in Fusly 1266 compared with the cultivation in Fusly 1262. The large increase in cultivation is owing chiefly to a great rise in prices, combined with an influx of capital, produced by a large expenditure during the last few years on account of the Railway.

102. The Government were pleased to authorize my engaging extra help in preparing the statements. The expense incurred on this account has been Rupees 719 5 4. I beg that this amount may be sanctioned. A detailed *statement is submitted with this report.

* Will be sent hereafter.

103. Seeing that so many different classes of cultivation have been treated of in this report, I have appended to it a statement, shewing in abstract, every item on which a reduction is proposed.

104. In printing the statements, I struck off, after communication with the Secretary to the Board, as many numbers of each statement as the Board and Government require. The statements therefore number 11* each set; 5 for the Board, and 6† for the Government.

* 3 on Foolscap. 2 on Medium.
