Proceedings of the Madras Government, Revenue Department, 22nd November 1862.

No. 267. Read the following Proceedings of the Board of Revenue, dated 8th November 1861, No. 6,149:—

Read the following letter from B. CUNLIFFE, Esq., Collector of Madras, to W. HUDLESTON, Esq., Secretary to the Board of Revenue, Chepauk, dated Nagalapuram, 8th October 1861, No. 348.

SIR,

1. I have the honor to reply to the Board's Proceedings 4th January 1860, No. 23, forwarding Government Proceedings 21st December 1859, No. 1,733, which suggested that the higher rates both of single and double crop Nunjah in Smalley's villages should be lowered according to a given scale, and that if the Board approved of the proposition, the scheme might be extended to the other villages in the District.

2. I regret that my reply has been so long delayed, but on first perusing the papers, after taking charge of the District in last year, I was so convinced that the relief should be general, and not confined to the rates in question, that I was anxious to put before the Board a more enlarged measure of reduction.

3. The Deputy Collector at Madras, an Officer of great revenue experience, consented to prepare the Statements necessary in explanation, and he has been engaged on the subject until now, as his more immediate duties gave him opportunity. I have, however, given up the idea of pressing my plan now, as the Government may not be inclined to forego at this time the amount of revenue which it proposes to relinquish.

4. I shall in the sequel give my reasons for advocating the larger reduction, and should a further report be called for, it can readily be furnished as the accounts have been prepared.

5. It will be remembered that the Board's proposal (Proceedings 22nd August 1859, No. 3,309) was to reduce the assessment in Smalley's villages by 11 per cent. This on the cultivation of Fasli 1261, a favorable year, would cause a surrender of 5,500 Rupees, and of 11,600 Rupees on the entire Ayacut. It has generally been supposed that the assessment in these villages was higher than in the rest of the District, but Statement B, accompanying the Government Proceedings above quoted, show that it is not so.

6. Enclosure A has been prepared to show the extent of the reductions as proposed by Government, if carried out throughout the District. It will be seen that the total remission, column 7, will be 43,275 Rupees on the entire Ayacut, and 33,349 on the cultivated portion of it, leaving column 16. 53,364 Rupees out of which the reduction, judging from the the effects of lowering the assessment elsewhere, might be made good. This last amount, however, includes immemorial waste, which should be struck out of our calculations, as the cultivation of it is improbable. Omitting Anadi, the Sheycal and Laick waste will be between 4 and 5,000 Cawnies, but the culture of this portion even is not looked for by those most conversant with the District.

7. The fact is that cultivation is carried on to the full extent for which there is irrigation. The Ryot has no other wish or desire than to increase his farm, and of this we have ample proof in the increased demand which a good season invariably causes and in the annual remissions which are given for withered produce, thus demonstrating that the Ryot is anxious to take full advantage of the hopes which the early season may encourage.

8. I reply, therefore, to the Board's query in their Proceedings of the 4th January 1860, that a moiety of the waste is occasioned by want of water. For the same reason I am of opinion that the amount proposed by the Government to be given up will not be supplemented by additional cultivation.

9. Statement A, accompanying the Government Proceedings, shows that the waste which includes Anadi, is greater in the rates for which no relief is proposed, than in those which are lowered. The supposed better lands indeed, as may be learned from the same Statement, have on the average only 7 per cent. waste, but their more favorable situation will account for this condition.

10. The average assessment is low as remarked by the Government, but low as it is, the Sheycal and Laick waste is 3.2 per cent. notwithstanding the alleged advantage of nearer vicinity

to the Madras market. There must be some cause for this, and I will endeavour shortly to explain it.

11. The District is emphatically a poor one. It has no river irrigation (for the small channels of the Pálár cannot be so called), such as exists in most other Nunjah Districts, affording an almost certain supply of water in the early part of the season. We are dependant on tanks alone, for the most part small, and holding two or three months' supply. These are filled by the north-east monsoon, and will water but little of the so-called Nunjah extent under them.

12. The project of leading a channel from the Pálár across the District from west to east will be extremely beneficial, when completed. Though it is now apprehended that the Pálár is very seldom in flood in the early Fasli, and therefore that it will not give the advantages anticipated, it will still bring a sure supply in the monsoon to a number of our best tanks, and thus do away with the present uncertainty of cultivation under them.

13. As the District surrounds the Presidency Town, unusually high prices are supposed to favor the Ryot; but in fact, this condition though existing to some extent, is much exaggerated. The price current lists will show that the Southern Districts enjoy on the whole a better market. Exportation raises the price in them, while importation both by sea and land lowers it in Madras. Inquiry would, I think, show that during our late unfavorable years, food has been cheaper at Madras than in many other parts of the Presidency.

14. Supposing, however, though I do not myself allow it, that the demand had favored this District more than its nighbours, the dearness of labor, from the proximity of a large city, and the various operations carried on within it, has more than counterbalanced the alleged advantage. There is no doubt that the farmer in Chingleput has much to contend with in this respect, and that every agricultural operation is to him highly priced.

15. The Mirasi system too in a degree, but not, I believe, to the extent often attributed to it, may discourage agriculture by throwing impediments in the way of procuring land by those who are not of the Mirasi body. But this is an ancient institution, and there is no ignoring it, though some great names in Indian Administration have endeavored to do so. It is better to recognize it fully, before the Civil Courts compel respect to its privileges, and this is another reason why the land tax of the District should be so low as to give room for the Mirassidárs' dues without trenching upon the fair profits of the cultivator. The present feeling between the Mirassidár and the Pyakary is not a desirable one, and arises, as far as I have observed, more from the Pykary attempting to evade his dues, than from the landlord demanding beyond his rights.

16. Was a general rule recognized by authority, that the proprietor's share was to be, say one Rupee per Cawny of wet land, and half a Rupee for dry, the Mirassidárs would be content, any extent of land would be willingly let out by them, and the present ill feeling would cease.

17. Though our Punjah rates are very low, there is but little land taken up. The soil is poor, and will not bear the more remunerative products of other Districts, Indigo, Gram, Ground nut, &c., and which so often pay the assessment of the Puttah, leaving the Nunjah to be enjoyed rent-free.

18. My predecessor recommended (6th April 1858) a general reduction amounting to about 1½ lacs, but the Board (paragraph 12) were averse to such a large abatement, and preferred awaiting the arrival into the District of the survey and assessment now in progress throughout the country.

19. As their entry into the District seemed to me as near as the Greek Kalends, I had it in view, as before remarked, to submit a scheme of reductions slightly differing from Mr. Shubrick's.

20. Deducting the Manavary lands, my proposition would have embraced the foregoing of 1,13,000, the reduction being caused by throwing the existing 249 Nunjah rates into 14, the condensing so many classes being necessarily accompanied by a lowering of the demand. My average rate would have been 4-14-6 for single, and 11-14-3 for double crop land.

Present rates.			
Single..... ...	5	13	0
Double..... ...	14	0	0

21. Each village now has its 1st class, but the tax varies, and is learned only by a reference to the Pymaish account. This minute sub-division is most perplexing, throws difficulties in the way of an inspecting Officer, and renders so easy the tampering with the accounts that the village servants do not lose the opportunity. I should have proposed a fixed rate for each class, and this known, would give the rate. The alteration might easily be made in the present accounts, and no fresh ones need be prepared.

22. The reduction would not be made good by cultivation under present sources of Irrigation, for these, as said before, are fully employed, but the assessment being lowered, the Ryot would be induced to sink wells, and raise a wet crop on land which is now rarely reached by tank water, and paying the Nunjah Tax for the first crop, would take the second free of Tax, or at least would call on his well when the tank water proved deficient.

23. In this manner I think the revenue surrendered would in a year or two be made up, and we might dispense indeed with any further survey and assessment, which are expensive operations, and seem uncalled for, when, as in this District, the old survey is pretty accurate, and when the original calculations of produce, and of commutation price based upon them, though high, have been fairly distributed relatively, and a simple reduction in the rates, therefore, would equitably lower the assessment throughout.

24. If thought worthy of further consideration, the accounts are ready for a more detailed report.

25. The reforms alluded to in paragraphs 9 and 10 of the Government Proceedings have not been commenced. I have no one on my establishment, save the Sheristadár, to whom I could entrust the classification of these lands, and him I cannot spare from the current duties of the Office. A Deputy Collector of experience might be specially deputed on this work, for it is obvious that it is one upon which an high and trustworthy Officer should be engaged.

26. Should the Board decide upon lowering the higher rates, as suggested by the Government throughout the District, I hope to have sanction at an early date, so as to carry out the modification during the coming settlement. The plan which I have sketched is only an extension of this relief, and can be subsequently introduced, if thought desirable.

Enclosure No. 1.

Abstract.—Statement showing the operation of the revision to the extent proposed by Government.

1. In their Proceedings dated 22nd August 1859, No. 3,309, the Board submitted to Government their recommendation for a reduction of 11 per cent. on the Nunjah assessment of the 146 villages settled by Mr. Smalley in the Chingleput Táluq, and their proposals to transfer to the class of Punjah at suitable rates of assessment all unirrigated lands classed by Mr. Smalley as Nunjah, and also all "Manavary Nunjah" or land cultivated with wet crops by means of rain only, without artificial irrigation, these two last proposals being applicable to the whole District.

In Cons. 29th December 1859, No. 6,485.

2. The Government in their Order, dated 21st December 1859, No. 1,733, on the Board's Proceedings sanctioned the two last proposals for immediate adoption, and also a reduction in the rates of Nunjah assessment in excess of Rupees 9 per *Cawny* according to a scale laid down by them in paragraph 7, to be extended to the whole District if approved by the Board. They further authorized the employment of a small establishment to carry out the work.

3. In their Proceedings of 4th January 1860, No. 23, communicating these Orders of Government to the Collector, the Board requested him to report without delay the best mode of carrying out the arrangement for reducing the Nunjah rates throughout the District, and to state what portion of the waste assessed at rates below Rupees 9 per Cawny is due to want of irrigation.

4. Mr. Cunliffe's letter, recorded at the head of these Proceedings, is in reply to this call for information.

He submits a Statement showing that the extension of Government proposal throughout the District will result in a total reduction of Rupees 43,274, of which Rupees 33,349 will fall

on the cultivated area, and Rupees 9,925 on the assessed waste, the reduced assessment on this last portion of the lands affected being left at Rupees 53,363.

	Cawnies.
Single crop.....	13,374
Double „	7,350
	20,724

5. Out of the total Nunjah area of the District amounting to 3,32,000 Cawnies, the relief sanctioned by Government will benefit Cawnies 20,724.

6. Omitting from the waste Nunjah area all lands registered as "Anadi Bunjer" or immemorial waste, there will remain some 5,000 Cawnies of land registered as Sheykal and Laick, being lands which though once cultivated have been abandoned from periods more or less remote, but he states that those most conversant with the District do not expect that the reduction of the assessment will induce the re-occupation of even this portion of the uncultivated area, and that this opinion is shared by himself. He points out that the District is essentially a poor one in quality of soil, and but ill-provided with means of irrigation, and declares his belief that one-half of the whole waste is due to want of water, remarking that the proportion of waste to cultivation is greater in the rates below Rupees 9 per Cawny than in those above, as is apparent from the Statement A annexed to the Government Proceedings of 21st December 1859.

7. The Board have no hesitation in recommending that the Government proposal be carried out to the full extent, and are sanguine that this relief will in Chingleput District as elsewhere be followed by an increase in the area of cultivation sufficient to compensate for the revenue relinquished. They do not however consider that this reduction will effect more than a palliative of the existing evils of over-assessment, but would leave further reductions to be determined at the time of the survey and general revision of assessment in the District.

8. Mr. Cunliffe states that he has himself prepared a scheme of reduction to the extent of Rupees 1,13,000 on the Nunjah lands exclusive of the "Manavary" by throwing the existing 219 Nunjah rates into 14, but has not submitted it fearing that Government would be unwilling at the present time to relinquish so large an amount of revenue.

9. The Board regret that the Collector has allowed so much time to ba lost in concocting his larger scheme without introducing the smaller one that had been already sanctioned, but they must leave it to himself to determine whether on mature consideration he will bring forward his plan.

10. They are of opinion that well considered reductions of over-assessment are measures of wise economy, and not sacrifices of public revenue, as they are certain to be attended by benefit to the State indirectly if not directly by producing an extension of cultivation and in increased revenue from land, but they see no reason to think that Mr. Cunliffe's scheme would supersede the necessity of a regular survey and assessment of the District. It would merely introduce an imperfect measure by means of inadequate agency instead of one which is in its character complete, and for the carrying out of which there is an efficient machinery already at work elsewhere.

11. As measures have been taken to press to completion the Pálár irrigation project, which will much benefit the District, the Board trust that at no distant date it may be found advisable to undertake the regular survey and general revision of the District assessment.

12. The re-classification of all the unirrigated lands classed as Nunjah, and of the Manavary Nunjah, which was sanctioned by Government has not been commenced, though more than a year and a half has since elapsed. The Board greatly regret this most unsatisfactory delay, and cannot admit that the reasons assigned for it by Mr. Cunliffe are sufficient. If as he states he found himself unable without additional aid to carry out these remedial measures, he should at once have brought the difficulty to notice, and not have allowed the removal of glaring evils which had been detected and condemned, to be thus needlessly delayed.

13. The Board do not consider it desirable to employ the Sarishtadár Vurda Charry upon the work, and resolve to recommend to Government that a competent Deputy Collector be temporarily appointed specially for this duty.

14. If his services can be made available they would gladly entrust the task to Deputy Collector Ramaya now in Salem, otherwise they would name Tiruvencata Charry or Devasigamany Pillay, who are now employed in South Arcot and Coimbatore.

15. The whole reform might be carried out in the settlement for the current Fasli.

(A true Copy and Extract.)

(Signed.) W. HUDLESTON, *Secretary.*

No. 268. ORDER THEREON, 22nd November 1862, No. 2,463.

1. The Board of Revenue in their Proceedings above recorded assent to the scheme proposed by Government in their Order of 21st December 1859, No. 1,733, to reduce the higher rates of Nunjah assessment prevailing in the late Chingleput District, and state the manner in which they would give effect to it and other measures of relief to the Ryots.

2. The Government, therefore, resolve to instruct the Board to carry out without any delay the measures indicated in their Order alluded to, which are, first, to reduce the higher Nunjah rates, *throughout the District*, and make all the land single crop, a separate charge being made for a second crop when grown; second, to transfer to Poonjah such Nunjah land as is not provided with irrigation and Mánawáry Nunjah or land dependent on the falling rain. A competent Deputy Collector will be appointed at an early date to aid the Collector in carrying out these reforms. The Board will issue clear instructions on the subject for the guidance of the Collector and the Deputy, based on Proceedings of Government dated 21st December 1859, No. 1,733.

3. The Board will require Mr. Cunliffe to furnish them with monthly reports of the progress made in this important work, and see that no unnecessary delay occurs.

(Signed) J. D. SIM,

Secretary to Government.

– It seems to me inexpedient at present to do more than carry out the measures indicated in the Govt. Order of 21 Dec/59 – viz 1st To reduce the higher Bunjah rates, throughout the District, & make all the land singlecrop, a separate charge being made for a 2nd Crop when grown – 2nd To transfer to Poonjah, such Bunjah land as is at present provided with irrigation & Mirawary Nunjah or land dependent on the falling rain.

This would afford important relief, and further measures can be considered when the improvement of the District irrigation & the Revenue & Survey questions are settled. A good Deputy Collr. should be given to aid the Collector – Elt

This may be sufficient for the present – but time it must really be carried out at once, and that much is no more than the principle dictates that has already occasioned – Th Bd.

3 December 1859 – Sir, I am directed by the Governor in Council to forward for the information of the Board of Revenue, a copy of the Government Resolution on the Report of the Deputy Collector of Dharwar, on the Bunjah Cultivation of that District, and to request that the Board will favour Government with their opinion as to the practicability of the measures suggested by the Deputy Collector for the improvement of the Bunjah Cultivation, and the increase of the Revenue derived therefrom. I am also directed to request that the Board will favour Government with their opinion as to the practicability of the measures suggested by Captain Coates, in his Report on the Bunjah Cultivation of the Kaladgee and Dharwar Collectorates, and the Bunjah Cultivation – The Superintendent of the Cotton Experiments in Dharwar attends with the Deputy Collector of Dharwar, and Captain Coates, at the Board's Office, on Tuesday next, at 11 o'clock, to explain the Plans for the improvement of the Bunjah Cultivation, and to answer any questions which the Board may wish to put to them. I have the honor to be, Sir, Your most obedient Servant, [illegible] Secy to Govt

In the order already granted the Govt sanctions five other reforms viz the transfer to Punjab at suitable rates of assessment of all lands not provided with irrigation at Govt expense; and all lands designated as "Canal Punjab". These reforms have not been carried out owing to the following one officer except the Secretariat already fully occupied with current business. to whom he could entrust this duty. The Board recommend that an experienced Deputy Collector be attached to the District temporarily for this purpose and they name 3 officers whom they consider well qualified for this duty.

The Govt are led by the Committee report to consider that a more is necessary general measure than that

A decrease of six figures.
