

MADRAS RECORD OFFICE.

Government of Madras.

Revenue DEPARTMENT.

G.O. No.	1468	Press ~~Mis.~~
Dated	15-6-	1866.

Not to be folded or roughly handled

No. 359. Read the following letter from the Governor General of Netherlands India, to His Excellency the Governor of Madras, dated Buitenzorg, 31st March 1866, No. 129.

1. Not long ago the Government of Ceylon requested to be informed whether I could meet with the request of Mr. Thoraites, Director of the Botanical Garden at *Paradenia*, for the interchange of *Calisaya* seeds.
1 Box containing *Cinchona* seeds.
2. This proposal appearing to me so very advantageous, that it was not to be accepted unhesitatingly. By this manner both *Ceylon* and *Java* might become possessed with *Chinchona* species, which hitherto was partially possessed by either, or did not possess at all.
3. Interchanges of this kind have since taken place, and as far as can be judged with great success.
4. In the meanwhile, it strikes me very forcibly, that like interchanges might be met with success, with reference to other Governments with equal satisfactory results.
5. First of all, I feel desirous to make the proposal to the Government of Madras, and would feel greatly indebted to your Excellency if your Lordship could meet with my views, feeling at the same time confident that your Excellency will be pleased to consent to receive some seeds of good *Calisaya*.
6. Those which I have the pleasure of forwarding herewith to your Excellency are of the most valuable description, containing three to five per cent. of alkaloids spey, and has been gathered at *Tjisoran* (*Malabar Mountains*) in February last.
7. In *Java*, amongst others, would be most acceptable the seeds of *Succirubra Officinalis* (*Condaminea*). If reports are true, plants of these species are growing in *Madras*, and seeds have been gathered or will be soon collected; could some of these be spared, they would be thankfully accepted by me.
8. I take the liberty by this opportunity to inform your Excellency that we have here become acquainted with a variety of *Calisaya*, possibly perhaps of a wrongly classified species of *Chinchona*, powerful in development and of luxurious foliage; but the bark of which produced, until now, not more than 1-3 per cent. of alkaloids.
9. For the above reason, the classification of these species are being subjected to a more careful enquiry by Mr. F. Miguel, Professor of Botany at Utrecht.
10. As during Dr. *Junghuhn's* superintendence of the Botanical Gardens in *Java*, a large quantity of *Calisaya* seeds and plants have been exported to British India, it may be probable that some of the former mentioned species of less value had been sent along with them.

Ordered that the following letter be despatched.

No. 360. From His Excellency the Governor of Fort Saint George, to the Governor General of the Netherlands India, dated 15th June 1866, No. 1,468.

YOUR EXCELLENCY,

Miscellaneous.

1. I have the honor to acknowledge receipt of your Excellency's letter, dated 31st March 1866, proposing interchange of *Chinchona* seeds, sending me some *Calisaya* seeds, and requesting to be supplied with seed of the *Succirubra* species.

taken place, and as far as can be

*Proceedings of the Madras Government, Revenue Department,
15th June 1866.*

2. I had the pleasure to forward to your Excellency by the last steamer a packet of the seeds you desire, and beg now to thank your Excellency for those which you were good enough to send to me, and to assure you that I shall be most happy to meet your Excellency's wishes in the way of interchanging specimens, if you will inform me what you require.

3. I forward, for your Excellency's information, a copy of the latest report of the progress of Chinchona cultivation under the orders of this Government.

I have, &c.,

(Signed) NAPIER.

Private Council

No 129

Supplement

a bag with chin
chora seeds.

Batavia, 31st March 1866.

To:

His Excellency

The Governor of Batavia

A short time ago I was
informed by the Government of
Batavia, if I could meet a propo-
sal, made by Mr. Thwaites,
Director of the Botanical Gar-
den at Peradenia, for the in-
terchange of Calisaya seeds.

This proposal offered too
many advantages not to ac-
cept it unhesitatingly. For it
brought Calisaya and Java might
be supplied with Cinchona
species, which neither possessed
only in an unsatisfactory
condition or did not possess
at all.

Interchanges have since
taken place, and, as far as can
be

he judged, with good success.
I am sure it has struck
me as possible, that a like
exchange might also be effected
with some of the other Govern-
ments with results equally
satisfactory.

Christophall I should wish to
make a proposal in strict secrecy
to the Government of Madras.
I would feel greatly indebted
to your Excellency if the same
could be met with by you.

If I am well informed,
Your Excellency should like
to see the ... of your
belonging.

Those, which I have the plea-
sure to forward herewith to
your Excellency, are of the
most valuable description,
containing 8 to 30 of all kinds
of ... gathered at ...
near (Matarra Mountain)
in February last.

As you, in writing to
others, he extremely accept-
able and of the ... office,
and (concerning) I report to
your Excellency that species
are grown in Madras, and
must have been gathered on ...
he

long at hand soon. Could some of
these be spared, they would be
thankfully accepted by me.

I avail myself of this opportunity
to warm your Excellency,
that we have been as
acquainted here with a variety
of *Calisaya*, possibly even a
wrongly classified species of
Cinchona, powerful in develop-
ment and of luxuriant foliage,
but the bark of whose trunk
produced until now not more
than 1, 2% of alkaloids.

For this reason the class of
cortical of that species is being
subjected to another more
careful inquiry by Mr. Dr.
Miguel, Professor of Botany
at Utrecht.

During Dr. Jung.
Kuhn's management of the
Botanical Gardens in Java
considerable quantities of
seeds and plants of *Calisaya*
have been sent to British
India, it might however
improbable, still be possible
that some of the foremen,
known by valuable species
had been sent along with
them.

100/10
