Northern Section

Remarks on the Season.

Rain fell in these Districts.

In Ganjam, the season had become very promising. Rain was abundant and general;

the rivers were in fresh and the tanks and wells were amply supplied with water. Raggy and Paddy were being sown, and transplanted in places, according to the supply of water available. Sugar, Cotton, Red grain were thriving. The grains called Oatha Sama and Kara were being cut in Thindly.

In Vizagapatam, the rain fall was improving, and was of great benefit to cultivation.

In the Godavari District, the Amnicul Channels had received full supplies. The Godavari rose 16 feet, being one foot less than last year.

Tanks dependent on rain, had received small supplies of water, but insufficient for irrigation purposes.

The cultivation of the early dry crops, and the sowing of dry or black paddy had been extensively carried on during the month, and both were doing well. Under the Channels, the transplanting of paddy was in progress. Paddy plants were being raised in seed beds for further operations. Sugarcane under the Yeluri had suffered much from want of rain in June, but that portion

which had survived the drought, was doing

doing well. The Yeluri had since received freshes.

In parts of the Kistnah District, the Pomasa or early dry crops were being cultivated. Nursery beds were being raised for transplantation. Indigo was being cultivated in the Devi Taluq.

In parts of Tellore, a few tanks received a small supply of water, sufficient to afford drink for cattle; and the Peimair having likewise received a small supply, cultivation in wet

lands had commenced to a limited extent.

Sojja and Jomah were also cultivated in parts of the District. Indigo cultivation was going on to a very small extent.

In Ganjam, prices had fallen, in Vizagapatam they were stationary; in the Godavari District, they showed a downward tendency; in the Kistnah District, they had risen in some Taluqs, while in others they were stationary; but in Tellore, they

had generally risen.

Cholera and small-pox were prevalent in the Vizagapatam, Godavari, Kistnah and Vellore Districts. Fever and Guinea-worm were also prevalent in the jungle Taluqs of the Kistnah District. The Ganjam District on the other hand, was as healthy, though mortality was as great among the poor. In this District also, pasture was abundant and Cattle free from disease. In Vizagapatam, the Cattle manure was as on the decline; but in the remaining three Districts, Cattle suffered from disease as well as from want of pasture and water.

Rain fell in these Districts. Ceded Districts  
In Cuddapah, several tanks received moderate supplies of water. The ryots had begun to plough their lands and to sow Rajghy, Aurikay and Oil seeds &c. The standing crops were thriving. Three fourths of the Indigo cultivation

Cultivation in the Sidchout Taluq had perished, owing to the previous drought,

but that which survived, was thriving.

In Bellary, the earth was as sufficiently moistened by the rainfall, to admit of ploughing and sowing the early crops. The Tungabhadra river was full, and the crops under it, were reported to be thriving. The Huggly river was

dry. The crops under wells in some places were in a favorable condition. The Pysak crops were being reaped.

In Kurnool, a few tanks had received a small supply of water.

In all the Taluqs, the Poonasa crops consisting of Arka and yellow Janyogee were being sown. The crops already

raised

raised, were in a good state, except in the Hoilkomutta Taluq.

Prices had risen in Cuddapah. They were excessively high in Bellary and Kurnool. Prices of Cotton and Indigo were stationary in Bellary.

Cholera was prevalent in these districts. Small-pox showed itself in Bellary and Kurnool, and fever in the former district also. In parts of Cuddapah, the poorer classes were resorting to wild roots for subsistence. Throughout Bellary, great distress was experienced both from want of provisions and water, and the scarcity of water had been but very partially alleviated by rain. Reports of increase of crime had been

from want of water and pasture in both North and South Arcot, and large numbers of cattle had died in parts of the former District. Great distress was experienced throughout the District, particularly in the Poloor, Wandewash, and Palmanair Taluqs, where the poorer classes were subsisting for days together on leaves, roots, palmyra fruit, tamarind seeds and such like substitutes for food. Alms houses had been established by private subscription at Chittoor and Palmanair. The Langer Khanah at Vellore and Arcot afforded extended relief and poor houses were being established in parts of the District.

Cannery There was a slight fall of rain in these Districts.  
Tanjore - In the track under the influence of the Cannery the preparatory work

work of wet cultivation in seed beds and transplanting therefrom was going on favorably, except in the far eastern portions of Mayavaram and Lumbakonam, which the freshes had not reached. Still the evil effects of the almost entire want of rain even in these parts were perceptible in many ways. In the Kadarambain portions of the District, unmistakable symptoms of very great distress were manifesting themselves. The poorest had already commenced to leave their houses in search of employment in the neighbouring Kerasambam Taluqs and some had set out for Ceylon.

Trichinopoly. In the early part of the month there was but a moderate supply of water in the Cauvery and the Coleroon, but about the 14<sup>th</sup>, these rivers were full

4

been received; and as the Police were being overworked, an addition to the force had been sanctioned. The poor were reported to subsist on wild dates and tamarind seeds. There were 2340 deaths from cholera and 252 from fever. Cattle suffered from disease as well as from want of pasture and water in these Districts. In Bellary, fodder was scarcely to be procured, and starvation and disease had caused a loss of 3428 heads of cattle.

East Centre.

Rain fell in these Districts.

In Madras, the rainfall brought 15 days' supply of water to several tanks in the Trivellore Taluq. Poonjah crops were reported to be healthy in two Taluqs, but distress from drought was felt in the remaining Taluqs.

In North Arcot, a few tanks received from a week's to a month's supply

Supply. The cultivation of the wet and dry crops had been carried on to a limited extent. The standing crops had generally failed from drought and high winds. Some Manukattai, Cholum and Indigo had been cut, but the outturn was scanty.

In South Arcot, complaints were received from almost all the Taluqs, of want of water for drinking purposes. The fashes in the Coleroon supplied water to a few of the tanks in the Chellamburam Taluq; but in the other Taluqs the tanks received no water at all. Lumber, Paddy, Cholum &c had been partly sown.

Prices had risen in these Districts.

Cholera was prevalent in these Districts; fever and dysentery also shewed themselves in North Arcot and Small-pox in South Arcot. Cattle suffered from disease as well as from

The tanks in the Upland Taluqs were dry. No cultivation was undertaken except in the valley of the Tambapoornee river.

Prices continued high and rising in Madras, but in Tinnevely they had a slight tendency to fall.

Cholera and fever prevailed in Madras, where people were suffering severe privation. Want of water even for drinking purposes was greatly felt. The wells had dried up in places.

The Tinnevely District continued healthy. Pasture was scarce in the northern Taluqs and great distress was experienced from drought along the Madras Trunk road.

West Centre.

Partial and slight showers fell in these Districts.

Coimbatore. The Convery, No.  
-wamy, Amravutty and Koyab,  
rivers had their usual freshes,  
and the tanks in Coimbatore  
were generally full. Munjah  
cultivation had commenced. Man.  
-kains, Sugarcane and Kete vines  
were in tolerable condition. The  
cultivation of Cholun, Colundoo  
Cumboo &c. was going on to a  
small extent in parts of the  
District, and the crops were in  
a promising condition. The  
cotton plants were suffering  
much from drought.

Salem. It rained a little  
in all the Taluqs, and the fall  
was very fair in the Tichengode  
Taluq, in which the tanks re-  
-ceived from 10 to 30 days' supply  
of water. The dry crops in parts  
of the District had withered from  
drought.

full from bank to bank and the chief  
irrigating channels had been fully in-  
supplied with water, though some of the  
crops had withered from the failure  
of a seasonable supply. In some of  
the Munjah villages, the Maricar and  
Peshanum puddies was being cultivated  
but there was no cultivation in the Punjah  
villages from the failure of rain. The  
Indigo and Cotton crops were reported  
to be in the same state as in the  
last month.

Prices had risen in these  
Districts.

In Tichingopoly, Cholera, was  
prevalent to a small extent in places  
bordering on the Trunk roads. In  
parts of the District, the poor were  
reduced to eating aloe, roots, herbs &c.  
for want of proper food. Cattle were

dying by hundreds from disease. In  
Tanjore, the loss of live stock owing  
to want of pasturage and water and  
from disease, was reported to be very  
considerable.

There was a slight fall of Southern  
rain in parts of these Districts.

In Madurai, the cultivation of  
Paddy, Cumboo, was carried on to a small  
extent only in Kunjah, Ponjath and  
Garden lands, chiefly dependent on  
wells. The harvest of the summer crops  
was in progress, but the yield was not  
satisfactory. The standing crops in many  
parts had withered from drought. Cotton  
plants also had withered in parts of  
the District.

In Tinnevely, tolerable freshes  
came down the river and the irrigated

lands were everywhere planted with Cannabody.

The

drought. The little rain that  
fell had induced the ryots in  
most of the Taluqs to cultivate  
a few of the dry crops. The  
Kunjah lands had as usual  
been cultivated in parts of the  
Kaimkub Taluq, where water  
was available from the Cannay  
channel, but the crops were  
backward, owing to the excessive  
heat. Singily oil seed, Cholam  
and Cumboo crops had been har-  
vested, but in very limited  
quantity. Indigo had been cul-  
tivated, but the crops were  
withering from drought. Cot-  
ton had been cultivated on an  
area of 5293 acres of land, but  
no cotton had been picked dur-  
ing the month.

Prices had risen in  
these Districts.

Cholera, fever and ague prevailed in parts of these districts. The poor in some Taluqs of Salem were in great distress from want of food, and were reduced to picking pease, fruit, roots and boiled &c. marind seeds for subsistence.

There was a good fall of West rain in these districts.

In South Canara, the cultivation of the 1<sup>st</sup> crop was completed. The Paddy seedlings were thriving, and if the season continues equally favorable, an abundant crop is anticipated.

Prices had risen in these districts, and pressed hard upon the poorer classes.

These districts had been generally healthy, though a few cases of Cholera, fever and small pox had occurred.

The following is the Statement

Statement of Cotton and Indigo cultivation with the market prices for July 1866.

| Districts        | Cotton          |               |                 |               |                 | Market rate<br>of cleaned cotton<br>per Canary of 500 lbs. | Indigo        |                 |               |       |  | Market rate<br>per maund<br>of 25 lbs. |
