*Proceedings of the Madras Government, Public Works Department,*
*7th May* 1868.

No. 192. Read the following Endorsement of the Superintending Engineer, 4th Division, dated Madras, 29th April 1868, No. 470:—

Read the following letter from the Acting Assistant Engineer in charge of Chembrambakkam Tank Project, to the Superintending Engineer, 4th Division, dated Camp at Chembrambakkam, 25th April 1868, No. 74.

1. Referring to the G. O., No. 1,205, dated 21st April 1868, ordering that all expenditure should cease on the works necessary for the enlargement of the Chembrambakkam tank, I have the honor to report, for your information, that previous to the receipt of your demi-official Order of the 9th April, suspending operations until further orders, some 2,000 lineal yards of the old revetment of bund, had been removed. The bund is also very much cut into by the removal from it of nearly 5,000 trees by grubing them up.

2. I consider it my duty to bring the present state of the tank to your notice, as in case the execution of the proposed works be deferred for a lengthened period, it will be necessary to rebuild the revetment, and repair the ravages made in the bund before the season when a supply of water to fill the tank may be expected.

---

Submitted to Government with reference to G. O.; No. 1,205, dated 21st April 1868, with the Superintending Engineer's recommendation that so much of the work as has been pulled down may be re-constructed, to prevent breaches in the [illegible]ning.

(Signed) A. J. M. BOILEAU, Colonel, R. E.,
*Superintending Engineer, 4th Division.*

---

No. 193. ORDER THEREON, 7th May 1868, No. 1,444.

IRRIGATION, No. 13.

The Government sanction the re-construction of that portion of the old revetment of the Chembrambakkam tank bund which is reported to have been pulled down, and they approve of measures being taken for filling up the hollows in the bank caused by the removal of the trees which heretofore stood upon it. Care should however be taken that earth for the latter purpose is obtained from beyond the bund so that whatever work may be done may go towards strengthening the embankment. The revetment should be so rebuilt that it will come into use as a portion of the new work when the tank is enlarged.
