Proceedings of the Board of Revenue
dated 23rd June 1808.

Read the following letter.

N^o 832

From

The Superintendent of
Stamps

Madras

To

A. Macgregor Esq.

Secretary to the Board of Revenue
Madras

Sir,

With reference to Government Order
dated 8th April last N^o 942, I have the honor
to remind the Board and Government that the
annual Examination of Stock in the Stamp Office
should take place in the beginning of next
month and to request that an Officer may be
appointed for the purpose.

Madras,
General Stamp Office,
10th June 1808.

I have &c.
(Signed) W. Ramienar
Superintendent of Stamps

Ordered to be submitted to Go^{vt}.
Government with the Board's recommendation
that

that an officer may be nominated to conduct
the annual examination of the stock and the
accounts of the Stamp Office, and that his re-
muneration for the performance of the duty may
be fixed.

Proceedings of the Board of Revenue
dated 10th June 1868.

Read the following letter,

N^o 180

From

G. Sharnhill Esq.

By Collector of Madras

To

A. Macgregor Esq.

By Secretary to the Board of Revenue
Madras

Sir,

I have the honor to report the
result of a short tour in the Ponnai Taluk.

2. On my way I passed the Red
Hills Tank, the Board are aware of the ex-
tensive works going on there now. These works
give ample employment to the labouring popu-
lation as well as to the carts and bullocks
for some miles round.

3. On crossing the Cartillar I
found a good stream of fresh water passing
over the dam constructed where the high road
crosses the river. I was told this had been
flowing for 2 or 3 days denoting a good fall of
rain

rain somewhere in the interior.

4. I halted at Poodovoil and examined the country and Villages in the neighbourhood as far as Periapollim to the west. I was agreeably surprised to find the country so well supplied with water after the accounts I had heard. The surface was no doubt much parched but there were wells in every Village and ponds supplied with water scattered about within half a mile to a mile of each other all over the country. There is no stream passing down the Arue or Namavaram river, but there are pools of water in the deeper parts at no great intervals. Good water is everywhere procurable within 10 or 12 feet and often within 5 or 8 feet of the surface but with all these natural advantages the paucity of wells for irrigation purposes and the choked and silted state of most of the Spring Ponds, used for that purpose, is very observable.

5. The new Local Fund Road from Poodovoil to Arue is well advanced both as to tunnels and earth works: it will be a very useful branch.

6. The road from Uttukottai to the Sunk road is in progress near Periapollim and will afford work to those requiring it along the line for some time to come.

The

7. The chief Sunk near Poodovoil is that of Chinnambalur, this Sunk has been 5 miles long and commands land paying the fees 1000 as Pinner. It is in good order but the supplying channel which runs along the Sunk requires clearing. Another channel adjacent to this feeds the Arue Sunk and also requires clearing.

8. There are a number of Spring Ponds in the neighbourhood most of which are choked and some of which are under repair by Government. Irrigation from these Ponds is carried on by means of Picottahs and the extent of land irrigated is of course comparatively small. They are however very valuable as adjuncts to Sunk irrigation as they are to a certain extent independent of season.

9. From Poodovoil I went to Gummidipundi and the Panangadu Backwater, the limit of the District in that direction. There is work going on along the High Road which employs a certain number of men, the short branch road to Chinnambalur is finished as far as earth work is concerned.

10. The principal work in the neighbourhood is, however, the Causeway and Bridge on the Sunk Road over the Panangadu Backwater, earthwork to the amount of 9000 is in progress

rain somewhere in the interior.

4. I halted at Poodooroil and examined the country and Villages in the neighbourhood as far as Periapollim to the west. I was agreeably surprised to find the country so well supplied with water after the accounts I had heard. The surface was no doubt much parched but there were wells in every Village and ponds supplied with water scattered about within half a mile to a mile of each other all over the country. There is no stream passing down the Ance or Namavaram river, but there are pools of water in the deeper parts at no great intervals. Good water is every where procurable within 10 or 12 feet and often within 5 or 8 feet of the surface but with all these natural advantages the paucity of wells for irrigation purposes and the choked and dilapidated state of most of the Spring Ponds, used for that purpose, is very observable.

5. The new Local Fund Road from Poodooroil to Ance is well advanced both as to tunnels and earth works: it will be a very useful branch.

6. The road from Attukottai to the Sunk road is in progress near Periapollim and will afford work to those requiring it along the line for some time to come.

The

7. The chief Sunk near Poodooroil is that of Chinnambidu, this Sunk has a tunnel 5 miles long and commands land paying Rupees 10,000 as Revenue. It is in good order, but the supplying channel taken from the River near Periapollim requires clearing. Another channel adjacent to this feeds the Ance Sunk and also requires clearing.

8. There are a number of Spring Ponds in the neighbourhood most of which are choked and some of which are under repair by Government. Irrigation from these Ponds is carried on by means of Picottahs and the extent of land irrigated is of course comparatively small. They are however very valuable as adjuncts to Sunk irrigation as they are to a certain extent independent of season.

9. From Poodooroil I went to Gummidipundi and the Panangadu Backwater, the limit of the District in that direction. There is work going on along the High Road which employs a certain number of men, the short branch road to Chinnambidu is finished as far as earth work is concerned.

10. The principal work in the neighbourhood is, however, the Causeway and Bridge on the Sunk Road over the Panangadu Backwater, earthwork to the amount of 9000 is in progress

progress the work is in the hands of a contractor, one Shammuga Mudaliar, who is making arrangements for lodging some hundreds of workmen in Camps and for importing grain from which to pay the laborers. The masonry works are about to be commenced and will also employ a large number of men.

11. There is a certain amount of work on Tanks also in progress in that neighbourhood. The land about Gummudipundi is high but wells are more numerous than elsewhere and in most of the Villages a considerable extent of ground is even now cultivated with vegetables which find ready sale in the Madras market.

12. From Gummudipundi I went to Ponneri via Mettur at which point I struck the Ponneri and Pulicat road. The work on this had been stopped as the allotment had been exhausted. I have requested the Range Officer at once to proceed with it, as 4000 Rupes have been allotted to this road 13th Pro. No. from the Special Fund.

13. The stoppage of the road work had thrown a good many men out of employment; so I authorized the Acting Tahsildar to proceed at once with the repairs to two Tanks in the neighbourhood. From Ponneri I proceeded

proceeded to Medavoil whence I inspected the site of the sanctioned anicut at Vallur and the adjoining Villages.

14. Water is less abundant in this part of the Taluk and sums have been allotted in several Villages for the clearance of Ponds. As a general rule these Ponds are available both for drinking purposes and for irrigation.

15. A certain number of Tanks throughout the Taluk have been put in repair but many are still most dilapidated and almost all require to be supplied with sluices.

16. The result of my observations may be briefly stated as follows.

Owing to the failure of the harvest the quantity of grain in the country is small and what there is, is kept for private consumption and not brought to sale; the markets are nevertheless freely supplied and at fair prices from Madras and Pulicat, a wind bound vessel, laden with rice, having recently discharged her cargo at the latter port, and there is consequently no appearance of distress whatever amongst the people as the public works going on in all directions afford ready employment to all requiring it. If rain falls

falls a large number of those now employed
on works will return to their fields.

17. The supply of water for cattle is gene-
-rally fair, in some villages it is a little -
distant and where it has been ascertained
to be deficient, grants have been made for
clearing Ponds. Pasture is very scanty and
cattle are looking thin but not more so than
is usual in a dry hot Year.

18. Some few applications have been made for Tuccavi to purchase grain and bullocks and as the stocks of grain are exhausted and the mortality amongst the cattle early in the year was great, it may be necessary to grant it, but on this subject I shall address the Board again -

19. The sums granted for irrigation and Road works are, I think, for the present sufficient to employ all the surplus labour, should occasion for any further grants arise I shall bring it to the Board's notice.

20. I must however add that the sum allotted this year for irrigation repairs could

could be profitably spent annually for many years to come in restoring the Tanks to a proper state of efficiency - There is I think a great opening for improving the ~~pro~~
~~optional Extract~~ ~~of the~~ Tanks in supplying the
Tanks with water from the rivers Cortillas and Maranavaram by means of a regular system of Anicuts and Channels - I propose addressing the Board separately on the subject.

21. I was met at Poodoorail by the Sub Magistrate of the Lattivédu Division and received an account from him of the state of his division - He stated that in the 4 villages noted in the Margin the people needed employment and I accordingly authorized him to put the Marginally noted works in hand from the sum allotted for deepening Ponds. The Tanks need repair greatly but from the proximity of the Hills a certain proportion of the crops were able to be matured by means of spring Channels and the Jungles afford scanty grazing for the cattle -

*Proceedings of the Madras Government, Revenue Department,
19th June 1868.*

No. 478. Read the following Proceedings of the Board of Revenue, dated 10th June 1868.

Read the following letter from the Acting Collector of Madras, to the Acting Secretary to the Board of Revenue, dated Sydapet, 2nd June 1868, No. 180:—

1. I have the honor to report the result of a short tour in the Ponneri talook.
2. On my way I passed the Red Hills tank, the Board are aware of the extensive works going on there now. These works give ample employment to the laboring population as well as to the carts and bullocks for some miles round.
3. On crossing the Cortillar, I found a good stream of fresh water passing over the dam constructed where the high road crosses the river. I was told this had been flowing for two or three days, denoting a good fall of rain somewhere in the interior.
4. I halted at Poodoovoil, and examined the country and villages in the neighbourhood as far as Periapolliem to the west. I was agreeably surprised to find the country so well supplied with water after the accounts I had heard. The surface was no doubt much parched, but there were wells in every village, and ponds supplied with water scattered about within half a mile to a mile of each other all over the country. There is no stream passing down the Arnee or Narnavaram river, but there are pools of water in the deeper parts at no great intervals. Good water is every where procurable within ten or twelve feet, and often within six or eight feet of the surface; but with all these natural advantages, the paucity of wells for irrigation purposes, and the choked and dilapidated state of most of the spring ponds used for that purpose, is very observable.
5. The new Local Fund Road from Poodoovoil to Arnee is well advanced both as to tunnels and earth-works: it will be a very useful branch.
6. The road from Uttukottah to the trunk road is in progress near Periapolliem, and will afford work to those requiring it along the line for some time to come.
7. The chief tank near Poodoovoil is that of Chinnambedu; this tank has a bund five miles long, and commands land paying Rupees 10,000 as revenue. It is in good order, but the supplying channel taken from the river near Periapolliem requires clearing. Another channel adjacent to this feeds the Arnee tank, and also requires clearing.
8. There are a number of spring ponds in the neighbourhood, most of which are choked, and some of which are under repair by Government. Irrigation from these ponds is carried on by means of picottahs, and the extent of land irrigated is of course comparatively small. They are, however, very valuable as adjuncts to tank irrigation, as they are to a certain extent independent of season.
9. From Poodoovoil I went to Gummidipundi and the Panangadu backwater, the limit of the district in that direction. There is work going on along the high-road, which employs a certain number of men; the short branch-road to Chinnambedu is finished as far as earth-work is concerned.
10. The principal work in the neighbourhood is, however, the causeway and bridge on the trunk road over the Panangadu backwater; earth-work to the amount of 9,000 is in progress, the work is in the hands of a contractor, one Shanmuga Mudaliar, who is making arrangements for lodging some hundreds of workmen in camps, and for importing grain from which to pay the laborers. The masonry works are about to be commenced, and will also employ a large number of men.

*Proceedings of the Madras Government, Revenue Department,
19th June 1863.*

11. There is a certain amount of work on tanks also in progress in that neighbourhood. The land about Gummidipundi is high, but wells are more numerous than elsewhere, and in most of the villages a considerable extent of ground is even now cultivated with vegetables, which find ready sale in the Madras market.

12. From Gummidipundi I went to Ponneri *via* Metheir, at which point I struck the Ponneri and Pulicat road. The work on this had been stopped, as the allotment had been exhausted. I have requested the Range Officer at once to proceed with it, as 4,000 Rupees have been allotted to this road from the Special Fund.

Board's Proceedings, No.

13. The stoppage of the road work had thrown a good many men out of employment, so I authorized the Acting Tahsildar to proceed at once with the repairs to two* tanks in the neighbourhood. From Ponneri I proceeded to Medavoil, whence I inspected the site of

List of Works inspected in Ponneri Talook, 18th to 23rd May 1868.

Names of Works.	AYACUT.		REVENUE.		Remarks.
	Extent.	Assess-ment.	Extent.	Assess-ment.	
	Kanies.	rs.	Kanies.	rs.	
Thoranellur tank	136	794	90	668	Tank is in fair order, but requires two sluices at present; the bund is cut yearly to allow water to flow.
Chinnambedu tank	1,334	10,482	1,040	9,308	A very fine tank, in good repair, bund five miles long, at present quite dry, the betel, plantain, and sugar-cane gardens under it watered from wells.
Supply-channel to do.					There is a supply-channel from the Narana-varam river near Periapolliem, which is much choked and requires clearing. The head sluice, too, is without shutters, and as there is no under-sluice, or means of scouring the head, the silting at that part is very heavy.
Vadakanallur	105	626	90	516	The bund of this tank is almost obliterated; it has been estimated for repairs, and will be done this year.
Road from Poodoovoil to Arnee...					The earth-work is nearly completed and tunnels also; they appear well built. The road near Poodoovoil crosses a Nunjah flat, and is embanked. I think it should be gravelled in that part next year; near Arnee it passes over dry ground, and may not require it. It should be extended to Periapolliem to join the Uttukottah road.
Arnee tank	378	2,324	313	2,028	In good order, has a supply-channel from the river, which requires clearing.
Arnee town					This town covers a large extent of ground, and has fine wide open streets. Popula-tion partly of weavers, who have just now considerable orders to execute from Madras Mercantile Houses.
Spring-ponds					There are several spring-ponds requiring to be cleared, but the river bed affords a good supply of water for cattle, &c.
Road from Periapolliem to Uttu-kottah.					This road in progress; I only saw the com-mencement of it.
High-road from Cortillar to the boundary of Madras District at Panangadu.					Considerable stores of laterite are being collected along the road-side; the road itself is very much worn and broken up. Slight repairs are going on at present.
Bridge on Naranavaram river ...					A fine bridge of nine arches in fine order.
Road from Couvarapet to Satti-vedu.					I saw this road where it leaves the high-road; it has been some time completed; all but the tunnels, &c., appear well used; it is said that there is a want of water in the road. I directed the Deputy Tahsil-dar to report on a good site for sinking a well and planting a tope.
Gummidipundi old tank	251	968	226	898	This tank is in good order with sluices and calingulah complete.
Gummidipundi new tank...	194	405	98	426	Above the old tank and in great disrepair; wants earth-work and sluices.
Gummidipundi bungalow					In very good order indeed and clean. This bungalow has not been supplied with crockery, &c., and travellers naturally complain of being compelled to pay fees. Measures will be taken to procure the requisite crockery and cutlery.
Bridge and Causeway over the Panangadu back-water.					The earth-work is in progress, but there is still work amounting to Rupees 9,000 to be done in addition to the masonry which consists of three bridges. This back-water has always been a terrible obstruction to traffic. Earth-work and the piers of the bridges will, it is hoped, be finished this year, and the arches turned next year.
Choultry and Boudy near Panam-gadu.					A fine Boudy has been excavated in the high ground near the back-water by Mar Chetti, Shell Contractor, who is also build-ing a Choultry; this will supply a great want to travellers and to the work-people, as water is scarce hereabout.
Road from Chumambokolam to Trunk road.					The earth-work has been finished; tunnels still to be made; will be a useful salt and grain road.

List of Works inspected in Ponneri Talook.—(Continued.)

Name of Works.	AYACUT.		REVENUE.		Remarks.
	Extent.	Assess-ment.	Extent.	Assess-ment.	
	Kanies.	rs.	Kanies.	rs.	
Peddikuppam spring-pond ...					This is near the road and much choked; it would be useful to travellers, and would irrigate some twenty Kanies of Manavari land.
Surulipettah, Jonapalliem, and Narasingapuram tanks. }	17	132	17	131	These small tanks are to east of the high-road, and all need repair very much. Between Gummidiandi and Ponneri. Bund very much obliterated, urgently needs repair.
Killakaddi tank ...	71	165	67	156	
Somanambattu tank ...	132	744	122	769	Needs earth-work much; the sluices are in good order.
Katavur ...	254	1,538	237	1,536	A fine tank, partly repaired; 2,000 Rupees sanctioned for this year.
Arasur tank and pond ...	309	1,962	243	1,802	Tank in good order. Pond needs clearing.
Medur tank ...	120	844	116	894	The tank was repaired as a relief work in January, but requires sluices; the village returns Rupees 10,000 revenue. The supply to the tank is very precarious; it needs a river channel and an anicut across the Sunduru Madugu.
Pulicat and Ponneri road ...	917	3,957	603	3,070	This passes through Medur, and I followed it to Ponneri; work was stopped for want of funds a short time ago. I have placed money at the Range Officer's disposal, and requested him to re-commence at once. The road has been brought through the village of Medur, instead of round the outside to the annoyance of the villagers who protested against it. It is highly desirable to keep the roads outside villages as much as possible, both to save the spread of epidemics and to protect the villagers from annoyance.
Pond near Medur ...					This has been partly cleared by the Department Public Works for the use of workmen in the road; it is of great use, and should be further cleared, but the excavation has been brought so near the road, which is here embanked, as to endanger its stability in heavy rains.
Ponneri and Pulicat road again ...					The earth-work on the road has been partly done. The pits have been dug very irregularly in some places close up to the road, and in others spreading away into the fields; they are of all shapes and of different depths showing deficient supervision. The Talook Overseer, I was told, resides in Madras, and visits his Range at intervals. Tunnels should be put in hand where the water from the tank crosses the road, leaving others for another year. Trees have been planted at one part of the road, but the cost of watering is so great that I would not recommend any more being put down. A few spots along the road should be selected for topes and wells.
Ponneri Sub-Jail ...					The new Jail buildings consist of four Wards, an Hospital, Cook-room, and Privy nearly finished. The wards are large and very airy; they will hardly offer protection enough from wind and rain in bad weather, in other respects, they are excellent, and are nearly ready for use. The Tahsildar's Cutcherry is low, very hot, and somewhat dilapidated, and is completely dwarfed by the adjoining prisoners' cells.
From Ponneri to Medurol.					
Kumarsirulapakam pond ...					The pond is being cleared from the Discretionary Fund; it is a well-chosen work; water was needed, and has been found at nine or ten feet from the surface; it will be available for irrigation likewise.
Tank ...	195	503	85	405	Repairs needed and one new sluice; earth-work has been estimated at 1,000 Rupees.

List of Works inspected in Ponneri Talook.—(Concluded.)

Names of Works.	AYACUT.		REVENUE.		Remarks.
	Extent.	Assess-ment.	Extent.	Assess-ment.	
	Kanies.	rs.	Kanies.	rs.	
Kanniyambakam... ..	233	1,154	191	958	A pond here had been put down for clearance, and would, no doubt, be useful for irrigation, but there is still plenty of water in it, and there are numerous wells in the village so I counter-ordered it.
Vallur Anicut	1,324	8,684	696	4,796	An Anicut across the Cortiliar has been sanctioned in substitution of the turf-bund erected every year by the ryots. A new head to the channel is in progress, and the turf-dam has been put up as usual, and holds up a considerable body of water which is now flowing down the channels to the fields below. The anicut has not been commenced, nor have any materials been collected.
Meduvoil tanks	553	2,880	303	1,270	Meduvoil has two tanks, both urgently need repair; the big tank calingulah was carried away some years ago, and has never been replaced, consequently all the water that would otherwise be retained flows right away at once; it requires sluices also.
Voyalur tanks	1,537	5,416	627	2,290	Voyalur has three tanks, one partially repaired, two in ruins, and urgently needing repairs.
