The Timber Trade Review,

AND FOREST PRODUCTS REPORTER.

A WEEKLY NEWSPAPER. PRICE FOURPENCE.

Messrs. KELLY AND CO. beg to announce that they have made arrangements for bringing out, at an early date, a Class Journal, to be specially devoted to all that relates to Woods and Forest Products.

The necessity for a Journal having for its object the description of the various subjects interesting to so many sections of the Commercial and Trading Community is evidenced by the large interests at stake, and the progressive increase of the trade in Foreign Woods and Forest Products.

Largely as Iron is now used for different constructive purposes, far from displacing Timber, it has led to new additional uses for it, and given a great impetus to commerce, as is evidenced by the steady increase in our foreign supplies of wood.

In 1870 we imported over four million loads of timber and wood goods—the largest quantity ever yet brought into this country in one year. One-fifth of the whole imports came to the port of London. The principal countries from which we draw our foreign supplies of building woods are Norway, Sweden, Russia, Prussia, and British North America—the Colonial contribution forming about one-third of the whole. Mahogany, Rosewood, and other furniture woods, are brought from Mexico, Honduras, Brazil, and Italy.

The aggregate declared value of woods of all kinds and forest products imported is now over £14,500,000 per annum, to say nothing of ships built abroad and registered here, and 400,000 tons of shipping built annually in the United Kingdom. The extent of the home production of oak, elm, and other British woods, there are no precise data for estimating, but it is still very large.

At present the various purchasers, dealers, and workers in wood are solely dependent for information on the brief trade circulars of a few brokers and business houses, and, hence, they are not kept well advised as to the probable quantities and sources of supply, cargoes afloat, range of foreign prices, applications of science in the art of forestry, the improvements made in wood-cutting machinery, and the adaptability of many new woods for certain purposes, whether for ship-building, railway sleepers, submarine piles, carriage building, cabinet work, and other objects. Many new industries have been originated of late years from forest products with which it will be the province of this Journal also to deal, such as the preparation of wood pulp, the crushing of bamboos, and the collection of fibrous barks for paper-making, the manufacture of walking sticks, the preparation of wool from the leaves of the fir, the economic uses of the leaves of other trees, &c.

Not limiting itself to the mere ordinary trade in and applications of wood, it will extend its field of research and description to all forest products, such as the preparation of Tar, Rosin, and Turpentine, of Pearl and Pot Ashes, the commerce in Dye Woods and Tanning Substances, Cork Bark, Canes and Batts, India Rubber and Gutta Percha, the fossil and recent Resins and Gums, which constitute large articles of trade, and, indeed, all substances obtained in wild or cultivated forests, so that, combined with all that relates to the growth, regulation, and conservation of forests, valuable trade statistics and reliable prices current, the Journal will become an essential handbook of reference for thousands of persons in all parts of the world.

As there were by the Census of 1861 nearly half a million persons working in, or interested in, wood, it will be seen how wide is the field to address, and how excellent an Advertising Medium it will prove, from the large practical connection and the great business facilities at the command of the Publishers.
