1. *Chrysomelidae* (Coleoptera) (100%)

[illegible]

The map shows the northern Adriatic coastline from Trieste in the north to the Gulf of Genoa in the south. Sampling stations are indicated by numbered dots (1-10) along the coast. Station 1 is near Trieste, and station 10 is near the Gulf of Genoa. The map includes a coordinate grid with latitude from 45° 30' N to 46° 30' N and longitude from 13° 30' E to 15° 30' E. A scale bar at the bottom indicates distances from 0 to 100 km.

Figure 1 is a line graph titled "Percentage of total population in the labor force by age group, 1970-1990". The vertical axis (Y-axis) is labeled "Percentage of total population in the labor force" and ranges from 0 to 100 in increments of 10. The horizontal axis (X-axis) is labeled "Year" and ranges from 1970 to 1990 in increments of 10. There are six data series representing different age groups: 15-24, 25-34, 35-44, 45-54, 55-64, and 65+. The 15-24 age group starts at approximately 25% in 1970 and declines steadily to about 15% in 1990. The 25-34 age group starts at approximately 15% in 1970 and rises to about 20% in 1990. The 35-44 age group starts at approximately 10% in 1970 and rises to about 15% in 1990. The 45-54 age group starts at approximately 5% in 1970 and rises to about 10% in 1990. The 55-64 age group starts at approximately 2% in 1970 and rises to about 5% in 1990. The 65+ age group starts at approximately 1% in 1970 and rises to about 2% in 1990.

Year	15-24	25-34	35-44	45-54	55-64	65+
1970	25	15	10	5	2	1
1980	20	18	12	7	3	1.5
1990	15	20	15	10	5	2

Figure 1 is a schematic representation of the experimental design. It is divided into two main sections: 'Pretest' and 'Main Experiment'. The 'Pretest' section includes a 'Pretest' box with a 'Pretest' label and a 'Pretest' box with a 'Pretest' label. The 'Main Experiment' section includes a 'Main Experiment' box with a 'Main Experiment' label and a 'Main Experiment' box with a 'Main Experiment' label.

Figure 1. The effect of the initial concentration of the monomer on the polymerization of α -methylstyrene initiated by BuLi in THF at -78°C . The concentration of the initiator was 1.0×10^{-2} mole/l. The polymerization was carried out in the dark for 10 min. The polymerization was terminated by the addition of methanol. The polymer was isolated by precipitation with methanol and dried in a vacuum oven at 40°C for 24 h. The polymer was then reprecipitated from benzene solution into methanol. The polymer was then dried in a vacuum oven at 40°C for 24 h. The polymer was then reprecipitated from benzene solution into methanol. The polymer was then dried in a vacuum oven at 40°C for 24 h.

Circumstance	Justified (%)	Not justified (%)
If someone is attacking you	85	15
If someone is threatening you	75	25
If someone is harassing you	65	35
If someone is insulting you	45	55
If someone is annoying you	15	85

Figure 1 is a line graph illustrating the relationship between the number of days of rain and the number of days of sunshine. The x-axis represents the number of days of rain, ranging from 0 to 10. The y-axis represents the number of days of sunshine, ranging from 0 to 10. The data points are plotted as follows:

Days of Rain	Days of Sunshine
0	10
1	9
2	8
3	7
4	6
5	5
6	4
7	3
8	2
9	1
10	0

A straight line is drawn through these points, showing a negative linear correlation. The line starts at (0, 10) and ends at (10, 0).
