No. 231. Read the following Proceedings of the Board of Revenue, dated 11th November 1874, No. 3,282:—

Read the following letter from A. MACGREGOR, Esq., Collector of Malabar, to J. GROSE, Esq., Secretary to the Board of Revenue, dated Calicut, 3rd October 1874, No. 230:—

I have the honor to bring to the notice of the Board some considerations in connexion with the subject of G. O., dated 28th August 1874, No. 1,105. I regret that I was not allowed an opportunity of expressing an opinion on the report of the Commissioner of the Nilgiris and the Superintendent of Cinchona Plantations.

2. It seems to me much to be deprecated that the spread of cinchona cultivation in Wynaad, which is necessarily in rivalry with that of the Nilgiris, should be checked on such a very one-sided view of the matter.

3. Mr. McIvor says that the Wynaad bark is *deficient* in quinine. This the Commissioner translates into the sentence, "Mr. McIvor states that the cinchona in Wynaad yields no quinine." I am credibly informed that a batch of Wynaad bark sent home has yielded a fairly remunerative price. Undoubtedly, succirubra grows very much more rapidly, so that even, if the yield per pound is less then, the weight of bark per tree, produced in a given time, is more.

4. Further, as I have already observed, the tree is used for shade in places, for avenues, and for marking off fields of different age; and work connected with it can be done by hands employed on an estate when other work happens to be slack, etc.; so that in this way a large number of trees might be planted and worked out on small cost; and, owing to this and the more rapid growth, there might be more profit than on the Nilgiris.

5. Besides this, the price of Wynaad bark cannot be considered as definitely settled, the quantity as yet sent home being small. In sales of bark at home it is usual for intending purchasers to send their agents to test samples prior to the sale; and, if a large quantity can be placed in the market as is possible with Nilgiri bark, it is better worth while for dealers to send agents, and thus the price is improved by competition.

6. From an article which lately appeared in the *Madras Mail* I observe that Mr. Markham, after inspecting the cultivation of cinchona in Wynaad, wrote, "although the extension of this cultivation on the estates of European planters is much to be desired, it is far more important that the natives of the district should be encouraged to open cinchona gardens in every direction and in great numbers." The people suffer fearfully from fever. The scourge has appeared exceptionally early this season, and I have myself witnessed its ravages; while I am assured that later in the year the scenes even on the public roads are loathsome and heart-rending.

7. On this subject the Secretary of State writes, "while congratulating the Madras Government on the success which had attended the cultivation of cinchona in the Presidency, and recognizing the attempts made by European and Native

planters to further the enterprize, the greatest benefits would be secured should it be found practicable to promote the cultivation of the tree by villagers and small holders of land in suitable situations, even if they should not be able to do more than plant a few trees round their houses.

8. Again in his despatch, dated 20th December 1871, the Secretary of State writes, "the district of Wynaad, owing to the very large annual influx of laborers from Mysore and the prevalence of fever among them, is not quite in the same category as the less frequented hill regions. I am of opinion that the circumstances of Wynaad give that district a special claim to assistance from your Government in establishing an adequate extent of cinchona cultivation.

9. It appears to me that in deciding to close the issue of plants to Wynaad on Mr. McIvor's representation that "this advantage could not be limited to persons in Wynaad only, as persons on the Nilgiris and elsewhere would consider themselves entitled to the same privilege," the views enumerated in the foregoing orders have been lost sight of.

10. I have had some experience in this question of raising cinchona from seed, and I have observed that, except with regularly trained establishments working in a healthy climate, failure is the rule. The seedlings require such constant skilled handling, especially during the hot weather, that in a climate like Wynaad, where in those months fever is so rife, experiments are sure to miscarry. Not only daily attention, but attention several times a day is needed, and cannot in such a climate be ensured. A Superintendent can often barely muster the two or three hands required to drive the cattle to pasture and back, and these constantly change. With native Wynaad cultivators, raising such a delicate plant from seed, is simply out of the question.

11. I was at one time in hopes that the succirubra might be sufficiently propagated from existing trees in Wynaad, but in this I have been disappointed.

12. I still think that growing plants should be prepared annually on the Nilgiris for Wynaad, and strongly urge that Government should be moved to order this to be done. If necessary, let the number be limited to fifteen or twenty thousand, to be ready for removal during the month of April.

13. This appears to be absolutely essential to carry out the orders of the Secretary of State, reiterated at the close of the despatch already quoted, that all reasonable assistance should be extended to the Revenue authorities or to private persons in furthering and extending the cultivation.

Submitted for the orders of Government.

2. The Board think the Collector makes out a strong case for reconsidering the decision which has been arrived at with regard to supplying cinchona seedling from Ootacamund to Wynaad.

3. If the advantage is limited to Wynaad, the cost of establishment need not be great.

PROCEEDINGS OF THE BOARD OF REVENUE, dated 14th November 1874.

Read the following letter from A. MACGREGOR, Esq., Collector of Malabar, to J. GROSE, Esq., Secretary to the Board of Revenue, dated Calicut, 3rd October 1874, No. 236 :—

I HAVE the honor to bring to the notice of the Board some considerations in connexion with the subject of G. O., dated 28th August 1874, No. 1,105. I regret that I was not allowed an opportunity of expressing an opinion on the report of the Commissioner of the Nilgiris and the Superintendent of Cinchona Plantations.

2. It seems to me much to be deprecated that the spread of cinchona cultivation in Wynaad, which is necessarily in rivalry with that of the Nilgiris, should be checked on such a very one-sided view of the matter.

3. Mr. McIvor says that the Wynaad bark is *deficient* in quinine. This the Commissioner translates into the sentence, "Mr. McIvor states that the cinchona in Wynaad yields no quinine." I am credibly informed that a batch of Wynaad bark sent home has yielded a fairly remunerative price. Undoubtedly, succirubra grows very much more rapidly, so that even, if the yield per pound is less then, the weight of bark per tree, produced in a given time, is more.

4. Further, as I have already observed, the tree is used for shade in places, for avenues, and for marking off fields of different age; and work connected with it can be done by hands employed on an estate when other work happens to be slack, etc.; so that in this way a large number of trees might be planted and worked out on small cost; and, owing to this and the more rapid growth, there might be more profit than on the Nilgiris.

5. Besides this, the price of Wynaad bark cannot be considered as definitely settled, the quantity as yet sent home being small. In sales of bark at home it is usual for intending purchasers to send their agents to test samples price to the sale; and, if a large quantity can be placed in the market as is possible with Nilgiri bark, it is better worth while for dealers to send agents, and thus the price is improved by competition.

6. From an article which lately appeared in the *Madras Mail* I observe that Mr. Markham, after inspecting the cultivation of cinchona in Wynaad, wrote, "although the extension of this cultivation on the estates of European planters is much to be desired, it is far more important that the natives of the district should be encouraged to open cinchona gardens in every direction and in great numbers." The people suffer fearfully from fever. The scourge has appeared exceptionally

early this season, and I have myself witnessed its ravages; while I am assured that later in the year the scenes even on the public roads are loathsome and heart-rending.

7. On this subject the Secretary of State writes, "while congratulating the Madras Government on the success which had attended the cultivation of cinchona in the Presidency, and recognizing the attempts made by European and Native planters to further the enterprize, the greatest benefits would be secured should it be found practicable to promote the cultivation of the tree by villagers and small holders of land in suitable situations, even if they should not be able to do more than plant a few trees round their houses.

8. Again in his despatch, dated 20th December 1871, the Secretary of State writes, "the district of Wynaad, owing to the very large annual influx of laborers from Mysore and the prevalence of fever among them, is not quite in the same category as the less frequented hill regions. I am of opinion that the circumstances of Wynaad give that district a special claim to assistance from your Government in establishing an adequate extent of cinchona cultivation.

9. It appears to me that in deciding to close the issue of plants to Wynaad on Mr. Melvor's representation that "this advantage could not be limited to persons in Wynaad only, as persons on the Nilgiris and elsewhere would consider themselves entitled to the same privilege," the views enumerated in the foregoing orders have been lost sight of.

10. I have had some experience in this question of raising cinchona from seed, and I have observed that, except with regularly trained establishments working in a healthy climate, failure is the rule. The seedlings require such constant skilled handling, especially during the hot weather, that in a climate like Wynaad, where in those months fever is so rife, experiments are sure to miscarry. Not only daily attention, but attention several times a day is needed, and cannot in such a climate be ensured. A Superintendent can often barely muster the two or three hands required to drive the cattle to pasture and back, and these constantly change. With native Wynaad cultivators, raising such a delicate plant from seed, is simply out of the question.

11. I was at one time in hopes that the succirubra might be sufficiently propagated from existing trees in Wynaad, but in this I have been disappointed.

12. I still think that growing plants should be prepared annually on the Nilgiris for Wynaad, and strongly urge that Government should be moved to order this to be done. If necessary, let the number be limited to fifteen or twenty thousand, to be ready for removal during the month of April.

13. This appears to be absolutely essential to carry out the orders of the Secretary of State, reiterated at the close of the despatch already quoted, that all reasonable assistance should be extended to the Revenue authorities or to private persons in furthering and extending the cultivation.

Submitted for the orders of Government.

2. The Board think the Collector makes out a strong case for reconsidering the decision which has been arrived at with regard to supplying cinchona seedling from Ootacamund to Wynaad.

3. If the advantage is limited to Wynaad, the cost of establishment need not be great.
