Proceedings of the Madras Government, Revenue Department, 29th May 1874.

No. 279. Read the following Proceedings of the Board of Revenue, dated 19th May 1874, No. 1,170 :—

Read the following letter from F. PRICE, Esq., Acting Collector of Salem, to J. GROSE, Esq., Secretary to the Board of Revenue, dated Madigherry, 12th May 1874, No. 155 :—

I HAVE the honour to report that a cyclone of unusual severity passed over the northern and western taluqs of this district between the 4th and 7th instant causing very great damage, especially in the Tripatur Taluq, to irrigation works, roads, bridges, houses, and cattle.

2. The storm was the longest and, with the exception of the cyclone of May 1872, the most violent that I have seen since I joined the district.

3. I have not received any accounts from Ahtur and the southern taluqs. In Salem there was good rain and much wind, but nothing like what was experienced further north and west.

4. I have called for particulars regarding damages, and will send a further report when these are received. I have addressed the District Engineer regarding repairs, have given instructions touching the supply of wood and bamboos for the purpose of reconstructing the houses which have fallen, and have directed Tahsildars not to press collections until I know what the extent of the losses in the way of houses, cattle, and grain are.

5. This is all that I think will be needed. There are no fears of scarcity now, and there is plenty of work for every one.

SUBMITTED for the information of Government.

Proceedings of the Madras Government, Revenue Department, *29th May* 1874.

No. 281. Read the following Proceedings of the Board of Revenue, dated 19th May 1874, No. 1,169 :—

Read the following letter from A. WEDDERBURN, Esq., Collector of Coimbatore, to J. GROSE, Esq., Secretary to the Board of Revenue, dated 7th May 1874, No. 107 :—

IN conformity with the Orders of Government, dated 10th March 1874, No. 330, in Proceedings Board of Revenue, No. 1,643, dated 11th March 1874, I have the honour to forward for information copy of a letter to my address from Mr. Underwood regarding the apprehension of scarcity anticipated by Mr. Rice in his late division.

2. The long drought seems to have been, as might be expected, most prejudicial to the cattle which are never at any time too highly fed. It is the same everywhere, where forage is not stored, and cattle are turned out to find their own pasture.

3. Mr. Underwood has found no failure of crop in the Palladam Taluq; there has been very little, if any, in the Coimbatore Taluq, and nothing very serious in the Pollachy Taluq. The Tahsildars informed me that they made no reports, official or unofficial, to the effect that distress was anticipated.

4. Rain has been late of coming, having held off during most of April, but now having fallen, has enabled agricultural operations to be commenced for the sowing of the early dry crop, cholum. There is therefore no reason to anticipate a want of employment.

5. Some public wells have been reported as having become dry, and for the further deepening of these, allotments will be made from the Local Funds. As regards the subject of remission on lands under tanks and channels out of repair, adverted to in paragraph 9, inquiry will be made whether the apparently permanent transfer of the lands in question from nunjah to punjah is owing to causes beyond control, such as the silting up and inadequate capacity of tanks, and the necessity of such transfer is from preventible causes.

6. So for the present, at all events, there seems no reason for the commencement of any relief works.

ENCLOSURE No. 1.

From W. G. UNDERWOOD, Esq., Acting Head Assistant Collector, to A. WEDDERBURN, Esq., Collector of Coimbatore, dated Avenashy, 28th April 1874, No. 88.

I HAVE visited a great part of the Palladam Taluq, and from an examination of the taluq officials and accounts and of the fields, I have the honour to state that as yet there seems to be no ground for apprehending any want.

2. This taluq is later than Pollachy, being farther removed from the Western Ghauts and the early rain, and depends chiefly on the north-east monsoon.

3. It has a very rich soil and a very extensive well cultivation.

4. The want in this taluq will not be felt severely :—

(1.) On account of the extensive well cultivation which is now chiefly sown with cholum.

(2.) On account of the large tracts of black-cotton soil, where up to this time a great deal of employment was to be had by coolies in quest of work in picking the cotton. It is true the women and children chiefly do the work, but then the earnings go to the family. The crop has been about an average half-one.

5. The staple grain of the taluq is cholum, and it and the other crops are generally sown as follows:—

PUNJAH CROPS.

Grain.	UNDER WELLS.		On punjah land dependent on rain.
	1st-Crop.	2nd Crop.	
1. Cholum... ...	March and April.	October and November.	April and May.
2. Cumboo ...	Do. do.	Do. do.	Do. do.
3. Raggy	......	Do. do.	.. ...
4. Grains	......	......	July, August.

6. LAND DEPENDENT ON RAINFALL.—I have not found any land dependent on rainfall for water ploughed, except a few isolated patches of light black-cotton soil on the tops of ridges. There is no red soil ploughed; but, as will be seen from the above list, it is not too late to expect rain. The ryots seem quite easy in their minds, and I received no complaints except at Mandiripolliem, a rocky village on the road from Palladam to Oodumulpetta. They said "there was no water in the wells, and no food for the cattle, and that the Curnam, Monigar and Inspector have reported falsely." But the general freedom of the ryots from anxiety makes me believe there will be no great want.

7. WELL LANDS.—There is no lack of water in the wells, and the soil being rich, the crops are very fine. The wells are by no means full; but from an examination of a great number in most parts of the taluq, I am of opinion there is sufficient for the present crops even though no rain fell. At the present time the well land is wholly under cultivation. In places, the grain is already in flower; but the ryots are very irregular in cultivating under wells, and do not keep to the months laid down.

8. NUNJAH LANDS.—The crops on these lands have been rather more than ordinarily good.

9. There has scarcely any remission been granted. A large proportion of the remission granted is on land entered as nunjah, but for which first class punjah only has been charged for a number of years back, as the supply-channels or tanks have been out of repair. The only fears there are, are for sugar-cane and betel, etc., under tanks and not supplemented by wells. The water is very low, but the sugar-cane, etc., has not as yet suffered.

10. CATTLE.—The want of fodder at present is the most serious evil. The cattle are in very poor condition, and there is very little for them to eat. I have heard that owners have pulled the thatch off their houses to feed them, but I don't place much reliance on the rumour. Where the cotton is picked they are turned out; but I notice they did not seem to care for the leaves, and preferred any dried weeds or straw they could find. The sheep nipped off the tops of the plant, but refused to eat the leaves.

11. I enclose three Statements A. B. and C., which, though not perfectly accurate perhaps as applied to the whole taluq, will show sufficiently well for practical purposes, the comparisons intended between this and last year, which was an average one.

12. A. is compiled from Taluq Account D., and shows the actual area in acres under cultivation in the two last months and first three months of the year for the current and last faslies. From it, it will be seen that in the month where the decrease in area is the greatest it is only 40,000 acres roughly, and in January was only 500.

13. B. is a comparison of the rainfall for the three preceding and the present fasli up to date as registered at the Cusbah. It may not apply to the whole taluq; but, wherever I have been, there has been the same want of rain. It will be seen that up to April the rainfall does not compare so very unfavourably with any of the previous faslies, which were all good years, 1867 being the last case of famine.

14. C. is a comparison of prices of grain for the same months, as mentioned in paragraph 13, with salt added. It gives the numbers of measures procurable for the Rupee in Palladam

Cusbah. The rise in wet grains is not serious; but it is curious to remark that whilst in the past fasli cholum rose in price, in this fasli it has remained stationary. It seems to bear out the remark I made, that the ryots have no fear of the crops failing. The price of cumboo and raggy give no ground for alarm.

15. There has been no increase of agricultural crime.

16. So to answer your letter No. 236, dated 3rd March 1874, *seriatim*, I have th[illegible] state that in this taluq no scarcity is apprehended. The crops have nowhere failed, an[illegible]e generally been only slightly below an average half-crop. I do not think that the cultivators have suffered, and now that the rain has fallen, the labourers will not lack employment. The comparison of prices does not show such a rise as to lead to the belief that the labourers will be pinched. The state of the cattle was the worst feature of the season.

17. Most of the above report was drafted and corrected as I marched to this place. Now that the rain has fallen, all anxiety has ceased. I, however, send the report in to show what the actual state of the taluq was before the rain.

18. There have been two showers as yet; one began about 4 P. M. of the 25th April, and it rained steadily till about midnight. Up to the north of this, where I have been, the rain was much heavier. The second shower was on the 27th, and was not nearly so heavy. I have not ascertained what rain fell to the south; but, according to the rumours brought in by persons coming to the festival, it has been very heavy.

19. The Pollachy Tahsildar reports that to the east and west of that town the rain has fallen to a depth of about an inch, and that the people have begun to plough, and that there is every sign of more rain. He states rain had not fallen in two villages to the north.

20. In Coimbatore, I believe, the rainfall was over an inch; but I have received no report from the Tahsildar.

21. Here there is every sign of more rain falling again to-day, as the clouds are blowing up as they did last Saturday and Monday.

(True Copy.)

for Collector.

ENCLOSURES Nos. 2 to 4.—Statements.

THE Board are glad to receive this reassuring report which shows that the Collector's views were correct throughout. In all probability, more rain has fallen since Mr. Underwood wrote.

2. Paragraph 9 of Mr. Underwood's letter, with the Collector's remarks thereon, will be forwarded to the Officiating Director of Revenue Settlement, who has, it is believed, a field party now at work in Palladam.

and depends chiefly on the N. E. monsoon.

3. It has a very rich soil and a very extensive well cultivation.

4. The want in this Taluq will not be felt severely.

1st. On account of the extensive well cultivation which is now chiefly sown with Cholam.

2d On account of the large tracts of black cotton soil, where up to this time a great deal of employment was to be had by Coolies in quest of work in picking the cotton. It is true the women and children chiefly do the work; but then the earnings go to the family.

The crop has been about an average half one.

The

5. The staple grain of the Taluq is cholam and it and the other crops are generally sown as follows:-

Punjah crops.

		Under wells.		On Punjah land dependent on rain.
1	Grain	1st crop	2d crop.	
2	Cholam	March & April	October & Novr.	April and May
3.	Cumboo	- do -	- do -	—— do do
4.	Raggi	——	October Novr.	——
5	Grains	——	——	July, August.

Land dependent on rain fall.

6. I have not found any land dependent on rain fall for water ploughed except a few isolated patches of light black cotton soil on the tops of ridges. There is no red soil ploughed - But as will be seen from the above list it is not

too late to expect rain - The ryots seem quite easy in their minds and I received no complaints except at Mandiripolliem, a rocky village on the road from Palladam to Oodamulpetta. They said "there was no water in the wells and no food for the cattle and that the Curnam, Monigar and Inspector have reported falsely" - But the general freedom of the ryots from anxiety makes me believe there will be no great want.

Well lands.

7. There is no lack of water in the wells and the soil being rich the crops are very fine - The wells are by no means full; but from an

an examination of a great number in most parts of the Taluq I am of opinion there is sufficient for the present crops even though no rain fell. At the present time the well land is wholly under cultivation. In places the grain is already in flower - But the ryots are very irregular in cultivating under wells and do not keep to the months laid down.

Nunjah lands.

8. The crops on these lands have been rather more than ordinarily good.

9. There has scarcely any remission been granted. A large proportion of the remission granted is on land entered as nunjah, but for

which 1st class punjah only has been charged for a number of years back as the supply channels or Tanks have been out of repair. The only fears there are, are for sugar cane and betel &c. under tanks and not supplemented by wells. The water is very low; but the sugar cane &c. has not as yet suffered.

10. Cattle. The want of fodder at present is the most serious evil. The cattle are in very poor condition and there is very little for them to eat. I have heard that owners have pulled the thatch off their houses to feed them. But I don't place much reliance on the rumour. Where the cotton is picked they are turned

turned out but I notice they did not seem to care for the leaves and preferred any dried weeds or straw they could find. The sheep nipped off the tops of the plant but refused to eat the leaves.

11. I enclose 3 statements A, B, and C. which though not perfectly accurate perhaps as applied to the whole Taluq will show sufficiently well for practical purposes, the comparisons intended between this and last year, which was an average one.

12. A is compiled from Taluq account D. and shows the actual area in acres under cultivation in the two last months and 1st 3 months of the

year for the current and last Faslies.

From it it will be seen that in the month where the decrease in area is the greatest it is only 40,000 acres roughly and in January was only 500.

13. B. is a comparison of the rainfall for the three preceeding and the present Fasly up to date as registered at the Cusbah. It may not apply to the whole Taluq; but wherever I have been there has been the same want of rain. It will be seen that up to April the rain fall does not compare so very unfavorably with any of the previous Faslies, which were all good years, 1867 being the last case of famine.

14. C. is a comparison of prices of grain for the same months as mentioned in para 13 with salt added. It gives the numbers of measures procurable for

for the Rupee in Palladam Cusbah.

The rise in wet grains is not serious. But it is curious to remark that whilst in the past fasly cholam rose in price - in this fasly it has remained stationary. It seems to bear out the remark I made that the ryots have no fear of the crops failing. The price of Cumboo and Ragi give no ground for alarm.

15. There has been no increase of agricultural crime.

16. So to answer your letter No. 236 dated 3d March 1874 seriatim I have the honor to state that in this Taluq no scarcity is apprehended. The crops have nowhere failed and have generally been only slightly below an average half crop. I do not think that the cultivators have suffered and

now that the rain has fallen the labourers will not lack employment. The comparison of prices does not show such a rise as to lead to the belief that the labourers will be pinched. The state of the cattle was the worst feature of the season.

17. Most of the above report was drafted and corrected as I came marched to this place. Now that the rain has fallen all anxiety has ceased. I however send the report in to show what the actual state of the Talug was before the rain.

18. There have been two showers as yet. One began about 4 P.M. of the 25th April and it rained steadily till about midnight. Up to the north of

of this where I have been the rain was much heavier. The 2d shower was on the 27th and was not nearly so heavy. I have not ascertained what rain fell to the South. But according to the rumours brought in by persons coming to the festival it has been very heavy.

19. The Pollachy Tahsildar reports that to the East and West of that town the rain has fallen to a depth of about an inch and that the people have begun to plough and that there is every sign of more rain. He states rain had not fallen in two villages to the North.

20. In Coimbatore I believe the rainfall was over an inch; but I have received no report from the Tahsildar.

Here

21. Here there is every sign of more rain falling again today; as the clouds are blowing up as they did last saturday and Monday.

I have &c.
