Proceedings of the Madras Government, Revenue Department,
14th November 1876.

No. 184. Read the following Proceedings of the Board of Revenue, dated 7th November 1876:—

Read Proceedings of the Madras Government, Revenue Department, dated 28th ultimo, No. 1,523.

THE whole of the information asked for is not available in the Board's Office as no statements of cultivation separately for taluqs are submitted to them. All the taluqs in the Bellary, Cuddapah, and Kurnool Districts are more or less distressed, and the Board have, therefore, compiled the statements called for as far as they can for these districts. The Collectors concerned are requested to furnish complete information on the several points stated by the Government of India.

2. From the statements enclosed (Nos. 1 to 10), it will be observed that up to September only 1,844,629 acres have been cultivated in the three districts against 3,335,419 acres in the previous year. The proportion of dry and wet cultivation in the earlier and later months in these districts on the average* of five years ending 1875-76 is as shown below:—

3. From these figures it will be seen that the later cultivation, even in ordinary years, bears a small proportion to the whole, and that the time for the chief crop is past.

4. These per-centages are not quite reliable, as it not unfrequently happens that cultivation is not brought to account in the months in which it actually occurs owing to the delay in obtaining the village returns, and therefore the proportion shown as cultivated subsequent to October is greater, and that cultivated up to October less than the reality. A statement is enclosed showing the earliest and latest dates on which

Proceedings of the Madras Government, Revenue Department,
14th November 1876.

the principal crops grown in the three districts are sown, from which it will be seen that, except as regards second crop cultivation and a few minor grains, such as samaloo (Millet) and Bengal gram (Chenna), the sowing generally takes place before the 30th August, the 30th October being almost the latest date. There appears, therefore, to be now very little prospect of cultivation being extended, and the ryots, as a rule, grow particular crops only on particular soils, and are reluctant to break through to commence cultivation operations after the usual season has expired.

The present state of the crops in each of the taluqs is not exactly known, but from the general information the Board have received, almost all the crops appear to be perishing for want of rain and it is feared that, especially in the Bellary District, they have already generally withered away. The Collectors concerned are requested to report in detail on the condition of crops in each taluq, to what extent they have already perished, how much are likely to yield, any and what outturn, and how far, if speedy rain should fall, hopes of saving the crops on the ground may be entertained.

The rain-fall up to September compares with the average rain-fall of the last five years as shown below :—
