1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved. 2. The second step is to define the requirements. This involves determining what the system is intended to do and what it must be able to handle. 3. The third step is to design the system. This includes creating a detailed plan of how the system will be built and how it will be tested. 4. The fourth step is to implement the system. This involves building the system according to the design and testing it to ensure it meets the requirements. 5. The fifth step is to maintain the system. This involves monitoring the system for problems and making changes as needed to keep it running smoothly.

Pooné, 10th February 1876.

Honorable D. H. Carmichael,
Ag. Chief Secretary to Government,
Revenue Department,
Madras.

Sir,

I have the honor to send herewith by book post the last proofs of a Revenue Manual of British India which I have compiled & intend to publish shortly and to request that you will kindly lay it before the Honorable Board of His Excellency the Governor in Council with a view to secure their patronage to the publication.

(besides some
cheeky
remarks
of his own)

The Manual consists chiefly of an analysis of the evidence that was given before the House of Commons East India Finance Committee in 1871-72 in respect of all the larger items of the Revenue of the British Indian Empire. The witnesses were carefully selected by the Committee as being the highest living authorities on the important subjects on which they were examined, & the information elicited with regard to the past history, present condition, & prospective growth of the different heads of British Indian Revenue was of a character which cannot be found elsewhere in any available official publication.

The analysis of the evidence of the witnesses has

1. The first part of the paper is a review of the literature on the topic. It discusses the various methods used to study the effects of stress on the immune system, and the results of these studies. It also discusses the role of the hypothalamic-pituitary-adrenal axis in the stress response.

1. The first part of the paper is devoted to a discussion of the various methods of determining the rate of reaction. The second part is devoted to a discussion of the various methods of determining the order of reaction. The third part is devoted to a discussion of the various methods of determining the activation energy of a reaction. The fourth part is devoted to a discussion of the various methods of determining the equilibrium constant of a reaction. The fifth part is devoted to a discussion of the various methods of determining the rate of reaction. The sixth part is devoted to a discussion of the various methods of determining the order of reaction. The seventh part is devoted to a discussion of the various methods of determining the activation energy of a reaction. The eighth part is devoted to a discussion of the various methods of determining the equilibrium constant of a reaction. The ninth part is devoted to a discussion of the various methods of determining the rate of reaction. The tenth part is devoted to a discussion of the various methods of determining the order of reaction. The eleventh part is devoted to a discussion of the various methods of determining the activation energy of a reaction. The twelfth part is devoted to a discussion of the various methods of determining the equilibrium constant of a reaction.

[Faint handwritten notes]

has been supplemented in many places with information furnished by the more recent Administration Reports so as to present to the reader a connected view of the whole subject from the earliest introduction of British Rule to the present day.

I submitted the analysis for the opinion of Mr. Pether, late Ag. Secretary to Bombay Government in the Revenue Department & at present Municipal Commissioner for Bombay, who was one of the witnesses examined by the Committee. He has been pleased in reply to state that the analysis has been exceedingly well done & very valuable, & he has promised his support in case I sent up the book officially to him. A true copy of Mr. Pether's letter is attached herewith for your information.

In justice to Mr. Pether, I must observe that he advised me to strike out all personal expressions of opinion to be found in the book. I myself am painfully conscious of this necessity, but I find that the thing cannot be now attempted without entirely recasting the whole work for which task I have at present no leisure to spare. The analysis first appeared as a contribution to the columns of a Native newspaper and this exigency of its original appearance rendered it necessary to state the dry summary with expressions of views & opinions which alone can make such dry summaries readable in newspaper. I have, however, done my best to reduce the personal criticisms to a minimum, & Mr. Pether himself has been pleased in his letter to observe that the comments are neither unfair nor intemperate.

The

The usefulness of such a manual in the hands of the Revenue Officers of Government, especially on their first entrance in the service, does not, I think, require to be expatiated upon. A knowledge of the past history, present condition & prospective growth of the leading sources of revenue & a careful comparison of the different systems of collection which obtain in different parts of British India, appears to me to be a *sin qua non* for every Revenue Officer of Govt.

The Compilation submitted herewith will to some extent supply a want which I believe all Revenue Officers have felt hitherto in not being able to receive any help in their endeavours to enlarge & deepen their knowledge of revenue matters. It is for the use of such Native & European Officials that I have labored on this Compilation. If I were to publish the work on my private account, I cannot hope to be received as a competent and correct Compiler on my own authority. It is, therefore, that I deem it necessary before publishing the manual to secure through you in some form or other, an official recognition of the value of the book, because such recognition will be the best recommendation to the Official & non-official students for whom I have compiled this manual, I leave it entirely to you to determine the form & extent of the recognition which I seek to secure at the hands of Government by this Appeal for the help of its patronage.

I have the honor to be
Your most ^{devoted} ob^d Servant
Cuplana
First Class Sub. Judge,
Poona

Handwritten text on the right page of an open manuscript. The text is written in a cursive script and appears to be a letter or a personal account. The page is numbered '1' in the top right corner. The text is written in dark ink on aged, slightly discolored paper. The handwriting is somewhat slanted and compact. The text is organized into several paragraphs, with some lines indented. The overall appearance is that of a historical document.

1

My dear friend,

I have just received your letter of the 10th inst. and am very glad to hear from you. I am well and hope these few lines will find you the same. I have been thinking much of late about the future and the present, and how we should live in the midst of so much uncertainty. I feel that we should be true to our principles and to our duty, and that we should strive to do the best we can in all circumstances. I hope that you will share these thoughts with me, and that we may be able to do something for the good of the world.

I am, dear friend, your sincere friend and ally.

Yours truly,

Wm. Lloyd Garrison

Dear Sir,

I must apologize very sincerely for having left your letter of 28/10/75 so long unanswered. I have been so much occupied that I have been unable to find time to its subject.

I have read with much interest your analysis of the evidence given before the H. of C. Kinsey's Committee and consider it exceedingly well done & very valuable. I have not had time to compare the analysis with the original evidence but from what I recollect of the latter, I think the analysis is very accurate.

If however you wish for the patronage of Govt you should I think erase your personal comments on the evidence. I by no means mean to say that these are either unfair or intemperate; they are quite unobjectionable in law & fact articles as written, you will see the same in the papers. But a book that appears under the sanction of Government as an analysis of evidence should be that alone and should not contain the personal views of the Compiler. I have marked in pencil some of the passages to which I refer. I notice that nothing can as a rule be better than the analysis of the evidence relating to other Presidencies; it is with regard to Bombay, on subjects on which you have of course formed your own views, that you suffer them to appear.

If you send up the book officially while I am in the Secretariate, I shall have much pleasure in laying it before the Honorable Board.

Believe me
Yours truly
Signed W. G. Pether
