NOTE.—The proposed dimensions of escapes and heights of bund are printed in large type. The existing dimensions in small type. The following abbreviations are used. C.—Calingulah with dam stones. W.—Weir with flush crest. E.—Escape at ground level. B.—Bund of tank.

3. The following is a summary of the work proposed to be carried out :—

Rettanibedoo Tank.—The bund of this tank was breached in four places, and the inner bank is considerably eroded. The estimate provides for closing the breaches, sectioning and turfing the bund, and also for forming a permanent escape with laterite boulders.

Thottacadoo large Tank.—This tank was breached in four places by the breaching of other tanks above it, which are being repaired, and the bund is very much damaged. The estimate provides for sectioning and turfing the bund, and also for forming an escape.

4. The financial circumstances of the Rettanibedoo tank are apparently unsatisfactory. Including the recorded expenditure and the proposed outlay the debit against Revenue amounts to Rupees 4,288, or 132 per cent. average outlay on average

revenue. Moreover, the average revenue is only about 50 per cent. of the ayacut assessment. Full explanation should have been given regarding past expenditure, the cause of the small irrigated area, and the reason why previous outlay has been abortive.

5. The following statement shows the proposed distributions of the outlay recommended for sanction to the debit of the several Agricultural heads of account involved:—

Name of Tank.	Nature of Work.	HEADS OF ACCOUNT.
