and having necessarily to be executed,
the time originally contracted to found
to be below the actual requirements
for the full completion of the channel,
the Directors due Notice was
given and with the letter dated 11th
October a Pamphlet entitled Estimates &
Plans prepared by the Bellefield
Company Officers & Surveyors for
Deepening and Widening the
Channel from the Termination of the Canal
at Bellefield to the Ohio River
also for the Erection of the Canal
Locks, Dams, Aqueducts &c. &c. as
now Executing by the Company
with Reports thereon and Estimates
of the Expence of Completing the
Navigation to the Lake Erie at Buffalo
and Black Rock, which Pamphlet
was also transmitted to the Directors
by the Secretary.

2. The Channel when completed, will provide a Navigation of four feet deep in the least of the Summer Seasons, and of six feet deep in the Spring of the year, through the whole extent, with the exception of the Locks, which will be constructed of sufficient dimensions to admit Boats of one hundred and twenty feet long, and twenty feet wide, with a draft of water of seven feet.

3. The execution of the work has been allotted to six different Sections, each of which comprehends the Deepening and widening the Channel, with the Construction of Locks and Dams, and the Erection of Culverts, Bridges &c. &c. necessary for the Navigation of the Canal through which it passes and on which Contracts to the amount of One million of Dollars have been entered into, to be completed in the Year 1825, and from the

Bad nature of the Country, & the large number of Locks
and Embankments, Aqueducts &c. &c. which
Section passing to and from the
Canal.

3. The execution of the work
has been allotted to six different Sections
each of which comprehends the Deepening and widening the Channel, with the Construction of Locks and Dams, and the Erection of Culverts, Bridges &c. &c. necessary for the Navigation of the Canal through which it passes and on which Contracts to the amount of One million of Dollars have been entered into, to be completed in the Year 1825, and from the nature of the Country, & the large number of Locks and Embankments, Aqueducts &c. &c. which will be required in the Construction of the Canal, it is probable that the Contracts for the whole will not be completed within the time specified, but the Commissioners are of opinion that the Work will be finished in a reasonable time after the Year 1825, and that the Canal will be navigable from the Lake to the Ohio River in the Year 1826.

4. The Commissioners have also caused a Survey to be made of the Country between the Canal at Bellefield and the Allegheny River, with a view to the Construction of a Canal from the Allegheny River to the Canal at Bellefield, and have directed Estimates to be made of the Expence of such Canal, which Estimates have been transmitted to the Directors by the Secretary.

5. The Commissioners have also caused a Survey to be made of the Country between the Canal at Bellefield and the Monongahela River, with a view to the Construction of a Canal from the Monongahela River to the Canal at Bellefield, and have directed Estimates to be made of the Expence of such Canal, which Estimates have been transmitted to the Directors by the Secretary.

6. The Commissioners have also caused a Survey to be made of the Country between the Canal at Bellefield and the Monongahela River, with a view to the Construction of a Canal from the Monongahela River to the Canal at Bellefield, and have directed Estimates to be made of the Expence of such Canal, which Estimates have been transmitted to the Directors by the Secretary.

under the Body to be, and, on receiving
the Stamps the Collector will Examine
