1. *Staphylococcus aureus* (Staph. aureus) is a Gram-positive, spherical bacterium that is commonly found on the skin and in the nose of humans and animals. It is a facultative anaerobe and can grow in a wide range of environments. Staph. aureus is a major cause of skin infections, such as abscesses, boils, and impetigo. It can also cause more serious infections, such as pneumonia, osteomyelitis, and sepsis. Staph. aureus is resistant to many antibiotics, making it a difficult pathogen to treat.
