Madras Meteorological office,

6th October 1894 No 1045

From

Miss E. Iris Pogson, F. R. Met. Soc.,
Meteorological Reporter to the Government
of Madras.

To

The Meteorological Reporter to the
Government of India,
Calcutta.

Sir,

I have the honor to enquire whether
it would not be advisable to fill up the
Average Rainfall and Variation Columns in the
Madras Daily Weather Report from the data,
obtained from the Rainfall Registrations,
maintained by the Revenue Department against
such stations as have only recently had Meteorological
observatories established, and consequently
have had no normal averages calculated.

His Excellency the Governor and a few other
officers are anxious to have all the columns
filled in, if possible, instead of inserting queries.
Should you approve of this proposal, I shall
be obliged by your kindly favouring me
with a copy of the Averages of the missing
notes

Mellors, Cuddalore,
Pambau & Linnemilly

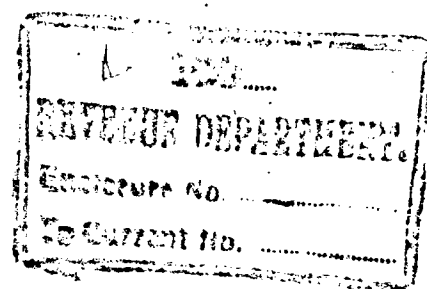

noted stations available at your office
as they were recently tabulated for about
20 years. A copy of letter No 94 dated 3rd
August 1894 on the subject received from
the Collector of South Arcot is enclosed
herewith for information

To

The Meteorological Reporter to the
Government of Madras,
Madras

Dated, Calcutta, the 3rd November 1894

Madam,

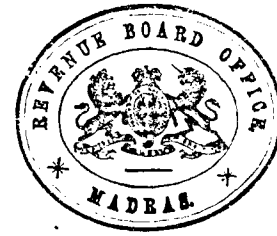

With reference to your letter No 1045 of
the 6th ultimo, I have the honor to inform
you that the normal rainfall data published
in the daily Meteorological reports are
from the Meteorological Observatory rain-
-gauges and not from the Revenue gauges.
These data are hence not available, as most
of the stations enumerated in your letter
have only recently been established.

I have &c

Proceedings of the Board of Revenue

(Revenue Settlement, Land Records and Agriculture).

Dated 17th December — 1896.

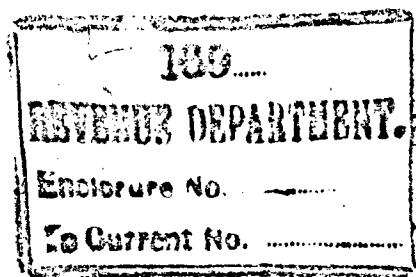

No. 6666 Misc.

~~Read~~

Resolution.

The attention of the Board has been drawn to the absence of figures showing the average rainfall from 1st April to date at the marginally noted stations, in the daily weather chart, and it requests the Meteorological Reporter to be so good as to state why this should be so, as the rainfall has been regularly recorded at these stations for the last 26 years, and there should be no difficulty in adding the figures

Cuddalore
Pamban
Tinnevely

at least approximate accuracy.

2. Their absence greatly reduces the value of the statement.

Proceedings of the Board of Revenue

(Revenue Settlement, Land Records and Agriculture).

Dated 1st January — 1897.

No. 1 Misc.

READ — The following letter from the Meteorological Reporter to the Government of Madras, dated 21st December 1896, No 1230:—

Sir

With reference to Proceedings of the Board of Revenue (Revenue Settlement, Land Records & Agriculture) No 6666 Misc dated 7th December 1896, I have the honor to forward herewith copies of correspondence between the Meteorological Reporter to the Government of India and this office regarding the question of using the rain averages of the Revenue Department Rainganges in the Madras Daily Weather Report for the four stations referred to in the above Proceedings for favor of information, from which you will see that that officer did not approve of the proposal

Resolution

Resolution

It will be pointed out to this Board that no opinion whatever on the point at issue was expressed in the letter of the Meteorological Reporter to the Government of India the 4th 3d date 3rd November 1894. It is confined merely to a well known statement of fact, and in the Board's opinion, the Maorus weather chart should be made as complete as possible, even though the rainfall data for the stations in question are not obtained from the same source as are those for other stations. The chart is prepared for local purposes and should be made, the Board considers, to serve as completely as possible local requirements.
