AUGUST.

Vaccination.

Reviewing the report on — for 1896-97.

GOVERNMENT OF MADRAS.

LOCAL AND MUNICIPAL DEPARTMENT.

READ—the following paper :—

From Surgeon-Lieutenant-Colonel W. G. KING, M.B., C.M., D.P.H., Sanitary Commissioner for Madras, to the Secretary to Government, Local and Municipal Department, dated 1st July 1897, No. 960-V.

I have the honour to forward herewith four stitched copies of the Vaccination report for 1896-97. The diagrams which appear in the copy of the report signed by the Inspector of Vaccination will be inserted in the bound copies.

ORDER—No. 1657 L., dated 30th August 1897.

With his letter read above, the Sanitary Commissioner forwards the report of the Inspector of Vaccination and Deputy Sanitary Commissioner on the working of the Vaccination Department in 1896-97.

2. *Work done by the several agencies.*—The following statement shows the total reported number of operations performed by the several agencies in each of the past five years and the average cost of each case reported to be successful :—

Vaccine agency.	Number of operations.				
	1892-93.	1893-94.	1894-95.	1895-96.	1896-97.
(a) Government vaccinators in hill tracts ..	15,142	15,806	18,960	20,537	21,350
(b) Local Fund vaccinators	967,991	992,390	1,009,994	1,011,802	1,068,430
(c) Municipal vaccinators	114,063	113,837	118,135	120,190	118,665
(d) Cantonment staffs	6,089	5,489	3,739	5,366	5,551
(e) Dispensary staffs	38,311	28,513	26,410	19,201	13,370
(f) Medical subordinates	15,142	16,439	16,870	14,732	12,748
(g) Zamindari vaccinators	6,883	6,359	5,814	6,343	7,516
Total ..	1,164,541	1,178,832	1,198,922	1,198,171	1,247,720
Average cost ..	A. P. 3 5	A. P. 3 5	A. P. 3 5	A. P. 3 5	A. P. 3 5

The total number of operations reported to have been performed during the year showed an increase of 49,549 or 4.1 per cent. over the figure for the previous year, but the average cost of each reported successful case remained the same. This was mainly due, notwithstanding an increase in the total cost of establishment, to a slight fall in the reported rate of success, which, in the opinion of Surgeon-Major Bannerman, was a consequence probably of the greater accuracy of the figures. It is observed that the ratios of success given in the table in paragraph 9 differ from the percentages shown in Statement I, but the latter does not include dispensary vaccination which is exhibited separately in Statement III. There was an improvement in the amount of work done by all the agencies, except the municipal vaccinators, dispensary staffs, and medical subordinates. In respect of the last two, vaccination was rendered optional by G.O., No. 1066 L., dated 9th May 1892; but although this is the case, it was not intended that these medical officers should not take every suitable opportunity which presented itself in their practice of performing the operation. The great decline in the number of vaccinations performed by them is not satisfactory; nor is the short

work done in municipalities. The total number of re-vaccinations fell from 77,546 to 74,589, the decrease being, in the opinion of the Inspector of Vaccination, largely the result of the inefficiency and want of influence of the Vaccination staff. The importance of re-vaccination will be once more impressed upon local bodies, who should take steps to deal adequately with the matter.

3. *Verification by Deputy Inspectors.*—The number of cases reported to have been verified by the Deputy Inspectors rose from 594,423 to 617,632. Of these officers, nine against twelve in the previous year failed to verify 50 per cent. of the cases in their ranges, and it is stated that explanations have been called for. The Deputy Inspectors of Vizianagram, Ellore, Paramagudi, Dindigul and Salem appear to have done particularly good work. But the work of the Deputy Inspectors generally, as Surgeon-Major Bannerman indicates in paragraph 3 of the report, is in many cases open to suspicion. The District Medical and Sanitary Officers inspected 30,488 cases against 25,512 in 1895-96. The number of cases verified by the Inspector of Vaccination himself was considerably smaller than in the previous year, but this was due to the fact that, during three of the best working months of the year, Dr. Bannerman was either ill or employed on other more pressing duties. The report should have contained some information as to the special character of the irregularities noticed by the Inspector in the course of his tours. The scheme for the employment of two Assistant Inspectors of Vaccination referred to in paragraph 3 of the report must lie over until orders have been passed on the proposals for the reorganization of the Vaccination department now before Government. The suggestion made by the Inspector in paragraph 4 should form the subject of a separate communication.

4. *Infantile Vaccination.*—Excluding the figures relating to the cantonments of Bangalore and Secunderabad, the total number of reported operations during the year was 34.8 per mille of the population, against 33.5 in the previous year, and the number of children under one year successfully vaccinated was 328,383 against 311,912, being 33.6 per cent. of the registered number of births against 32.1 in 1895-96. Infantile vaccination was still very unsatisfactory in the districts of Tanjore, Gódvári, Ganjam, South Canara and Malabar. The results in the last-mentioned district are particularly bad; the special attention of the Collector will be called to the subject. The best results appear to have been obtained, as in the previous year, in the districts of Madura, Coimbatore and Chingleput and in the municipalities of Madura, Ootacamund and Coonoor; but in the city of Madras only 69 per cent. of the children born during the year are shown to have been successfully vaccinated. The outturn of work in Tanjore, Srirangam, Cuddapah and Kumbakonam was far from satisfactory, being less than 60 per cent. The special attention of the municipal councils concerned will be drawn to this neglect, which indicates a failure in the duty of enforcing the compulsory clauses of the Act. As compared with the previous year, the largest increase in the proportion of infants protected was in the Madura Municipality, where the rise was 21.4 per cent., ascribed to the vaccination of a large number of infants belonging to strangers. The most serious fall occurred at Parlakimedi (21.2 per cent.) and Chicacole (18.7 per cent.), and this is attributed to the insufficiency and bad quality of the vaccine paste supplied from the Chicacole dépôt. It should have been explained what steps are taken to insure that an efficient vaccine is supplied from the dépôts and to check at an early stage the issue of a bad quality.

5. *Agency Tracts.*—The work of the Government vaccinators in the Agency tracts of Ganjam, Vizagapatam and Gódvári, taken as a whole, showed a further increase, the total number of operations performed being 21,350 against 20,537 in 1895-96 and 18,960 in 1894-95. The average number of operations performed by each vaccinator in the Jeypore range rose from 653 to 1,174, which is satisfactory; but there was a large decrease in Ganjam and in the Gudum Hills, which has not been explained.

6. *Local Fund Areas.*—There was an increase of 56,628 in the number of operations performed in local fund areas, and the average outturn of each vaccinator rose from 1,517 to 1,559. In thirteen districts there was an increase, which was considerable in Vizagapatam (22,844), Ganjam (11,382), Kistna (11,041), Gódvári

(8,827) and Nellore (8,767). It is noteworthy that Vizagapatam showed the largest falling off in 1895-96 and that there was a large decrease also in Kistna in that year. On the other hand, there was a decline in the eight districts noted in the margin. In South Arcot there was a decrease in the previous year also, while in Tinnevely and Malabar, this has occurred for the last three years in succession. The explanations of this which have been offered cannot be considered adequate, and the earnest attention of the Presidents of the district boards concerned is drawn to the subject. The average outturn of each vaccinator was highest in Vizagapatam (2,584); Trichinopoly followed next with 2,013 cases; and the average was more than 1,500 cases in Chingleput, Coimbatore, Madura, Salem, South Canara, Tanjore and Tinnevely. Compared with the previous year, there was a large advance in Vizagapatam from 1,930 to 2,584, which is noted with satisfaction, and a corresponding fall in Kurnool from 1,985 to 1,359, which has not been explained. The reported quality of the work done showed a general fall—thirteen districts exhibiting a lower percentage of success than in the previous year and the total proportion of success falling from 92.5 to 92.0—but this was probably due to more accurate returns and more careful supervision on the part of the verifying officers. The percentage of reported success including revaccinations was high in the Nilgiris (99.3), Trichinopoly (98.6), Cuddapah (98.4), Madura (98.4) and South Arcot (98.3). The lowest figures were reported in Malabar (81.9), Nellore (82.8), Gódvári (83.2), Tanjore (83.6) and Ganjam (84.7). The percentage of success verified by the Inspector of Vaccination during his special tours was only 79.8, and there is reason to believe that the figures reported by the Vaccination staff are not always trustworthy. The general percentage of success throughout local fund areas in respect of revaccinations is shown as 81.3. Several districts however return more than 90 per cent. These extraordinary results, coupled as they are with a high percentage of success in primary vaccinations, require explanation. It is probable that in some places revaccination is misunderstood and that persons in whose case the primary operation has failed and who have been subsequently vaccinated are shown under the head of "revaccination." The subordinate staff should be made clearly to understand that revaccination is applicable only to cases in which there has been previously a successful primary vaccination. The average cost of each successful case which was As. 3-3 in 1895-96 fell by one pie in the year under review. It varied from As. 6 in the Nilgiris to As. 2-1 in Salem, and was more than As. 4 in Anantapur, Bellary, Cuddapah, Gódvári, Kurnool and Malabar. The cost in Anantapur, Bellary, Kurnool and Malabar was also higher than in the previous year, and the district boards concerned should take early steps towards reducing the high cost in the current year. The work done in the different districts will be more fully noticed in reviewing the administration reports of the district boards. With regard to paragraph 8 of the report, the Inspector will be referred to G.O., Mis. No. 3899, Revenue, dated 30th September 1896, copy of which will now be communicated to him. The question of compulsory vaccination in unions or portions of a district will be considered in connection with the draft Bill to amend the Local Boards Act.

7. *Municipalities.*—Vaccination was compulsory in the City of Madras and in all the district municipalities in the presidency, except Tiruvannamalai and Chingleput, which were newly constituted municipalities during the year. It has since been made compulsory in Chingleput and immediate action should be taken, if this has not already been done, to bring into operation in Tiruvannamalai the compulsory provisions of the law. The total number of reported operations by the municipal vaccinators fell from 120,190 to 118,655, the decline occurring chiefly in Palghat (1,224), Masulipatam (921) and Negapatam (564). There was also a retrogression in 29 other towns. It is a matter for regret that this has occurred for the past three years in succession in Palghat, Vizagapatam and Tellicherry and for the past four years in Kiloré, Cannada, Tinnevely and Mangalore. The special attention of the councils concerned is

drawn to the matter, and the Government trusts that there will be an improvement in the current year. There was, on the other hand, an increase in 26 towns, which was most considerable in Trichinopoly (1,004). The proportion of infants successfully vaccinated to the registered births of the year rose from 77.5 to 78.3 per cent. The average outturn of work by each vaccinator was 1,069 against 1,559 in local fund areas, but owing to the closer supervision possible, the municipal returns are probably more trustworthy and genuine. It exceeded 1,000 cases in thirty towns, as in the previous year. It was highest in Madura (1,955) and Vizianagram (1,884). The average cost of each successful case rose from As. 4-10 to As. 5 and compared unfavourably with that in local fund areas, where it was only As. 3-2. It varied from As. 11-9 in Tirupati to As. 1-10 in Cuddalore and Madura, and exceeded As. 8 in Chidambaram, Ongole, Srivilliputtur, Kumbakonam and Walajapet. The councils of these five towns and of Tirupati should take early steps to reduce this excessive cost. From the table showing the working of the system, prescribed in G.O., No. 1502 M., dated 19th October 1894, for the better supervision of compulsory vaccination, it appears that the number of children under one year successfully vaccinated according to the monthly returns was far in excess of the number returned as successfully vaccinated out of the total births entered in the register and available for vaccination. The difference was large in Madura (2,282), Calicut (1,737) and Trichinopoly (1,042) and as the difference cannot be wholly attributed to cases of infants born elsewhere and brought into the town in the first year of life, the Government considers that the explanation for this should be sought for mainly in defective registration of births—a subject which demands the special attention of the municipal councils concerned. The total number of operations performed in the City of Madras was practically the same as in 1895-96, the percentage of success being 99.2 in the case of primary, and 87.1 in the case of revaccinations against 99.7 and 89.8, respectively, in the previous year. The cost of each successful case rose from As. 5-6 to As. 6. Infantile vaccination was almost stationary, only 69 per cent. of the children born during the year being successfully vaccinated. There is thus scope for much improvement, and the attention of the Municipal Commissioners is drawn to this matter. The work done in the several municipalities will, as usual, be more fully noticed in the reviews of their administration reports. With regard to the reported ratio of success in revaccinations in Municipalities, the Government has to repeat the remarks made in paragraph 6 above respecting these operations in local fund areas.

8. *Vaccination with animal lymph.*—The total number of operations with animal lymph was 1,241,843, or only 226 less than the total number of operations performed, against 1,190,541 and 2,264, respectively, in the previous year. The following statement shows the results of calf-to-arm vaccination, vaccination with animal lymph preserved in glass tubes or plates, glycerine paste, and lanoline paste, compared with the figures of the previous two years:—

		Number vaccinated.	Number of successful cases.	Percentage of success.
Calf-to-arm vaccination	1894-95	378,955	363,448	97.4
	1895-96	347,525	332,921	97.3
	1896-97	332,292	314,851	94.7
Vaccination with lymph preserved in glass tubes or plates.	1894-95	142,399	132,536	94.1
	1895-96	101,944	94,915	94.7
	1896-97	121,589	112,548	92.4
Vaccination with lymph preserved with glycerine.	1894-95	642,296	558,009	89.2
	1895-96	713,531	621,805	89.4
	1896-97	709,143	614,084	86.3
Vaccination with lymph preserved with lanoline.	1894-95	27,540	25,278	94.3
	1895-96	27,540	25,278	94.3
	1896-97	78,810	71,503	90.6
Total	1894-95	1,164,159	1,053,993	92.5
	1895-96	1,190,541	1,074,919	92.3
	1896-97	1,241,843	1,113,959	89.4

The percentage of success continued to be highest in the case of calf-to-arm vaccination, while the percentage obtained with lymph preserved with glycerine,

which was used in more than half the number of cases, continued to be lowest, being 86.2 against 90.5 per cent. with lanoline paste. Human lymph was used in only 226 cases by the Government vaccinators in the Ganjam hill tracts.

9. *Mortality from small-pox.*—The number of deaths from small-pox was 12,218 or 5,778 more than in 1895-96, the majority of the cases having occurred in the district of Ganjam. From the diagrams referred to in paragraph 25 of the report, it appears that a steady and real advance has been made in the proportion of the total population protected. Of every 10,000 persons, approximately 4,000 may be regarded as protected in the district of Tinnevely, and more than 3,000 in the Nilgiri, Chingleput, Salem and South Canara districts, while in Ganjam and Malabar the number continued to be very low, being under 1,900. As regards municipalities, omitting the three recently constituted municipalities of Chingleput, Srivilliputtur and Tiruvannamalai, the number of protected persons per 10,000 of the population varied from 8,400 in Coonoor to 2,700 in Kumbakonam. The rates of mortality shown in the diagrams do not, in all cases, vary inversely with the proportion which the number of persons vaccinated bears to the total population, but this is attributable, among other causes, to the defective registration of vital statistics. The suggestion made by the Inspector of Vaccination in paragraph 24 of the report will be considered in the Revenue Department.

10. *General Remarks.*—The reports received from the Sanitary Commissioner on the subject of the reorganization of the Vaccination Department, and referred to in paragraph 10 of G.O., No. 1346 L., dated 27th July 1896, are under the consideration of Government. Dr. King's testimony to the good work done by Surgeon-Major Bannerman is noted with satisfaction.

REPORT ON VACCINATION

IN

THE MADRAS PRESIDENCY

FOR THE YEAR

1896-97.

MADRAS:
PRINTED BY THE SUPERINTENDENT, GOVERNMENT PRESS.

1897.

OFFICE OF SANITARY COMMISSIONER,
FORT ST. GEORGE, 29th June 1897.

No. 934-V.

From

Surgn.-Lieut.-Col. W. G. KING, M.B., O.M., D.P.H.,
Sanitary Commissioner for Madras,

To

The Secretary to Government
Local and Municipal Department.

SIR,

In forwarding the Annual Report on Vaccination for the official year 1896-97 by Surgeon-Major Bannerman, the Deputy Sanitary Commissioner and Inspector of Vaccination, I have the honour to state that I trust Government will regard the results obtained as bearing evidence of continued improvement in outturn of work effected under admittedly disadvantageous circumstances.

2. I would respectfully invite the attention of Government to my letter No. 855-V, dated 7th June 1897, in which I proposed, having regard to the fact that Government, as stated in G.O., No. 485, dated 17th April 1897, Public, is financially not in a position to undergo the cost of complete re-organization, that at least efforts should be made to so change the regulations under which the department at present works as to render it better fitted for the employment of animal vaccine lymph.

3. As already reported in my Annual Report on Sanitation for 1896, I have reason to regard the fulfilment of duty by Surgeon-Major Bannerman as characterized by zeal and energy.

I have the honour to be,

Sir,

Your most obedient servant,

W. G. KING, Surgn.-Lieut.-Col.,
Sanitary Commissioner for Madras.

REPORT ON VACCINATION IN THE MADRAS PRESIDENCY FOR THE YEAR 1896-97.

From Surgeon-Major W. B. BANNERMAN, M.D., B.Sc., Inspector of Vaccination and Deputy Sanitary Commissioner for Madras, to the Sanitary Commissioner for Madras, dated 23rd June 1897, No. 907-V.

I have the honour to submit the Annual Report on Vaccination in the Madras Presidency for 1896-97. As the report for 1895-96 was the triennial full one, this, in accordance with G.O., No. 1455, Public Department, dated 12th July 1886, has been made as short as possible.

2. The post of Inspector of Vaccination was, for the first 14 days of the official year, held by Surgeon-Major C. Mallins, but for the rest of the year by myself, on return from furlough.

3. During the year the following municipalities have been inspected in accordance with orders of the Sanitary Commissioner, and written reports submitted to Government, viz.:—Coonoor, Conjeeveram, Mayavaram, Mannargudi, Palghat, Calicut, Cochin, Chicacole, Parakkimedi, Berhampur, Ongole, Masulipatam and Erode, and also in addition 24 villages and unions. The circles of the following deputy inspectors have been thoroughly inspected, viz.:—Tanjore, Negapatam, Chicacole, Chatrapur, Ongole and Guntur. More would have been done in this direction but for the fact that three of the best working months of the year, viz., January, February and March, were otherwise unavoidably occupied, by illness, superintendence of the Mahamakham festival at Kumbakonam and deputation to Bombay on special plague duty. In paragraph 3 of the Government Order reviewing the last annual report on vaccination, it is noted that "Government regards these special tours as essential for the improvement of vaccination," so I would again point out that, with the present amount of sanitary inspection work devolving on me, it is impossible to visit more than 6 or 7 circles in the year. As there are now 53 deputy inspectors, exclusive of those employed in the town of Madras, it will be apparent that a dishonest deputy inspector might flourish unchecked for eight years or so before being detected. With the permission of Government then I would beg leave to submit a separate scheme for the employment of two Assistant Inspectors of the Assistant Surgeon class, whose duty it would be to inspect the verification work of the deputies and so impose a wholesome restraint on the dishonest practices which at present prevail to too large an extent in the department. This small addition to the strength of the department would not cost much and yet would result in an immediate improvement in its working as regards the accuracy of the returns submitted, so that one could, in future, get an idea of the actual extent to which the population is really protected, which is impossible at present.

4. Another defect under which the department labours is the lack of power to move deputy inspectors from one district to another without first obtaining the sanction of the president of the district board concerned. Several times this year, arrangements carefully thought out and believed to be for the best interests, not only for the department, but of the local boards, have been upset owing to the refusal of the president, district board, to allow the necessary moves. It is only natural, of course, that presidents of district boards should object to have a good man moved, but at the same time they can only take a local view of the matter, and have no knowledge of the wider interests of the department which necessitate such moves, nor of the difficulties imposed by their action on those responsible for its management. I would, therefore, respectfully submit for the consideration of Government the desirability of granting to the head of the Vaccination Department the power to move deputy inspectors from one district to another as the necessities of the case demand, and relying on his judgment to do the best possible, not only for the department, but for the local boards concerned.

5. The following table shows the strength of the establishment employed during the last two years, with the pay of each post:—

Years.	First-class Deputy Inspectors.	Second-class Deputy Inspectors.	First-class Vaccinators.	Second-class Vaccinators.	Probationers.
	Rs. 60—70.	Rs. 40.	Rs. 15—20.	Rs. 10—12.	Rs. 5—7.
1895-96	34	* 24	257	424	149
1896-97	34	* 25	272	407	151

* Four assistant deputy inspectors employed by the Madras Municipality.

From this it will be seen that, while the staff of vaccinators remains the same in numbers, there has been an increase of one deputy inspector of the second class. This is due to the action of the District Board of South Arcot in creating a new range. This example might well be followed by other large boards in whose districts vaccination is backward, e.g., Malabar.

6. The following table shows the total vaccination work done by all agencies throughout the Madras Presidency:—

	1895-96.	1896-97.
Primary vaccinations	1,120,625	1,173,131
Re-vaccinations	77,546	74,589
Total	1,198,171	1,247,720

From this it will be seen that there has been an increase of 49,549 cases as compared with last year. Under the head of primary vaccination the increase is 52,506, while the re-vaccination cases have fallen off by 2,957. The explanations received from the various districts do not throw much light on the cause of this decrease under the latter head; the favourite explanation put forward being 'unwillingness of the people,' nothing being said about the inefficiency and want of influence of the vaccine-staff, which, no doubt, is the real reason. The district of Ganjam shows an increase of 1,580 under this head, but no explanation of this has been afforded though called for. The other districts showing an increase are Salem (528), Tanjore (330), Gódvári (189), Madura (177), Nellore (36), and Kistna (8). The largest defaulters are Tinnevely (1,682), Trichinopoly (938) and Vizagapatam (899), the explanations offered being as noted above.

7. The districts showing the largest increase in the number of operations are the following:—Vizagapatam (22,844), Ganjam (11,382), Kistna (11,041), Gódvári (8,827), and Nellore (8,767). All these, except Ganjam, showed a decrease last year, so that it is noteworthy that they stand first in the list this year.

In eight districts a decrease is shown, as against ten in the previous year, viz., Coimbatore (6,790), Trichinopoly (6,014), South Arcot (4,004), Anantapur (3,304), Tinnevely (2,081), Madura (1,013), Malabar (139), and Chingleput (38). South Arcot showed a decrease last year also, while Tinnevely and Malabar have shown a decrease for the past three years.

The explanations offered by the various deputies concerned are as follows:—

Coimbatore.—Prevalence of cholera during the latter part of the year, and heavy rain during the north-east monsoon.

Trichinopoly.—This district has always been noted for the very large outturn of its vaccinators, and grave suspicion was aroused as to the accuracy of the returns, in consequence of which Surgeon-Major Mallins made a thorough investigation last year, which fully confirmed the above, and the Deputy Inspector in charge was suspended for six months and removed to another district. This probably fully accounts for the decrease, though the prevalence of cholera and absence of some vaccinators without substitutes may have contributed to the result.

South Arcot.—Several extra men were employed in this district; yet on account of the prevalence of cholera, absence of small-pox, failure in the supply of calves, want of help from village officers, and transfer of vaccinators, the above decrease took place.

Anantapur.—Owing to the prevalence of famine in this district, the Collector allowed the revenue officials to relax their efforts to help the vaccinators, in spite of the remonstrances of the District Medical and Sanitary officer; and it was only when the Sanitary Commissioner addressed him pointing out the great mortality that took place during the last famine from small-pox, that he again sent out circulars on the subject. The staff of vaccinators was incomplete for a time, and there was also failure of paste.

Tinnevely.—Prevalence of cholera, absence of some vaccinators and the bad working of the batch system. The District Medical and Sanitary officer has now however taken steps to abolish this pernicious system, so better results may be looked for in the future.

Madura.—Prevalence of cholera from November to March, heavy rains, and the fact that several posts were vacant for some time.

Malabar.—Constant transfer of vaccinators, and according to one deputy inspector, non-employment of caste vaccinators. As the decrease is very insignificant however, I fancy the true outturn of the district is now got at, the inflated figures of former returns being no longer furnished.

Chingleput.—The Deputy Inspector of Saidapet died during the year and the post was vacant for two months, during which time the returns fell off.

8. Last year Government were pleased to approve of the suggestion that heads of villages should be made to maintain separate lists of children under ten who were not yet vaccinated, but up to date no orders have apparently been issued on the subject. Another means that would largely contribute to the more thorough protection of the people would be the granting of power to district boards to declare vaccination compulsory in unions, where local conditions were favourable. In most districts there would appear to be no opposition to this step being now taken.

9. The following table shows the number of successful operations performed by all agencies with the ratio of success attained. The continued slight fall in the percentage of success is not, I think, to be deplored, as it probably points to greater accuracy in the returns. The remarkable similarity in the success rates in the work of medical subordinates and in cantonments and dispensaries—where no pressure is brought to bear on the operators to produce high rates—points to 88 per cent. being probably as high a rate of success as we can expect under the climatic and other unfavourable conditions experienced in this country:—

Establishment.	Number of successful vaccinations.				Ratio per cent. of successful cases.				Ratio per cent. of total successful cases.	
	1895-96.		1896-97.		1895-96.		1896-97.		1895-96.	1896-97.

VACCINATION REPORT.

The greatest percentage increase in the number protected as compared with births is shown by the districts of Nilgiris (19.1 per cent.), Vizagapatam (11.5 per cent.) and Madura (8.5 per cent.). In the case of the Nilgiris no reason has been assigned, though asked for, but it is to be noted that this increase just slightly exceeds the decrease noticed in this district last year. In Vizagapatam the increase is said to be due to the exertions of the vaccinators, and in Madura to the maintenance of unprotected lists by the village heads. The districts showing the greatest decrease are Salem (5.3 per cent.), Coimbatore (2.8 per cent.) and Chingleput (2.0 per cent.). The explanations offered by the deputy inspectors concerned are: objection of the people and carelessness of the vaccinators (Salem), prevalence of cholera, chicken-pox and fever, with long continued rain (Coimbatore), and opposition by parents (Chingleput).

As regards municipalities, the largest increase in the proportion of infants protected is shown by the following: Srivilliputtur (42 per cent.), Madura (21 per cent.), Ellore (19.6 per cent.), and Adoni (16.2 per cent.). The figures given for Srivilliputtur last year refer to a few months only, and cannot therefore be compared with this full twelve-months' return. In the case of Madura no explanation has been offered though called for, but it is evident that a large number of infants belonging to strangers are operated on. In Ellore and Adoni the reason given is the better working of the vaccinators.

The following towns show a considerable decrease when compared with the number of births registered. Parlakimedi (21.2 per cent.), Chicacole (18.7 per cent.), Ootacamund (18.3 per cent.), Mayavaram (17.6 per cent.), Cocanada (16.4 per cent.) and Walajapet (15.5 per cent.). In the case of Parlakimedi and Chicacole the explanation given is insufficient quantity and bad quality of the vaccine supplied from the Chicacole depôt; this is probably a correct explanation, as this depôt has at times supplied a very inferior glycerine paste. As regards Ootacamund, the floating character of its population must be reckoned with, and, as a matter of fact, vaccination has been well carried on here during the year. The explanations offered by the last three are: large number having left the town, large number having been vaccinated last year, and bad quality of vaccine supplied from Madras respectively. The small amount of work credited to Tiruvannamalai and Chingleput is due to the fact that these towns have only lately been made municipalities, and that vaccination has not yet been made compulsory in them.

I would here call attention to the very small proportion of infants protected in the six last districts in the list, the case of Malabar being specially bad, showing, as it does, a decline as compared with even the small outturn of last year. Towns also which show less than 60 per cent. of births operated on, cannot be regarded as having worked the compulsory clauses in a proper way.

12. The following table shows the cost of the various establishments and of each successful case. The average cost has decreased except in the case of municipalities and cantonments. In Local Fund circles the cost of each case has varied from 6 annas in the Nilgiris to 2 annas 1 pie in Salem; while among municipalities Tirupati is highest with 11 annas 9 pies per case, and Anantapur is lowest with 1 anna 4 pies :—

Establishment.	Total expenditure.		Average cost of each successful case.	
	1895-96.	1896-97.	1895-96.	1896-97.

* Information as to cost from the Deputy, Guntur, has not been received.

13. The work in municipalities shows a decrease of 1,535 cases when compared with last year. This was perhaps to be expected, as the arrears of cases were gradually overtaken through the operation of G.O., No. 1502-M., dated 19th October 1894. In 32 towns a decrease is shown as noted below; names marked with an asterisk showed decrease last year also, those with two for three, and those with three for four years in succession:—

** Palghat, (1,224), Masulipatam (921), * Negapatam (564), * Vellore (373), Palamcottah (270), *** Elore (201), ** Vizagapatam (183), Anakapalle (173), * Bezvada (145), * Calicut (140), Parlakimedi (116), *** Cocanada (113), *** Tinnevely (104), * Mayavaram (95), Tanjore (87), Ootacamund (78), Nellore (68), Srirangam (65), *** Mangalore (61), * Chidambaram (61), Coonoor (57), Tuticorin (51), Erode (48), Berhampur (38), Cochin (32), * Bimlipatam (28), Coimbatore (19), Vizianagram (13), Walajapet (6), ** Tellicherry (4), Madras (3), * Periyakulam (3).

Vaccination is compulsory in all municipalities with the exception of Tiruvannamalai and Chingleput.

The table below shows the working of the Government Order referred to above, and it is curious to notice the discrepancies existing in the figures of this return when compared with the infantile vaccination as shown in the ordinary monthly returns. These two columns ought to show a close agreement if registration was carried on properly, though, of course, some allowance must be made for the case of infants born elsewhere and brought into the town in the first year of life. But in the cases of Madura (2,281), Calicut (1,737), Trichinopoly (1,042), Coimbatore (981), Negapatam and Salem (961), these differences are so great as to suggest that some other explanation must be sought:—

Municipalities.	Total births available for vaccination.	Number died.	Number left the town.	Number vaccinated successfully out of births registered.	Number vaccinated successfully under one year of age according to monthly return.	Number remaining to be disposed of at the end of March 1897. Compulsory vaccination not in force.

14. The work turned out by Government vaccinators shows an increase of 813, which might have been more but for the fact that returns for nine months only are available in the case of Ganapur, the deputy inspector of this range having died and difficulty being experienced in getting a suitable man to succeed him.

15. In zamindaries the work has increased by 1,173, while the cost of each successful case has decreased by 9 pies. Almost no re-vaccination work is done by these vaccinators.

16. The work in dispensaries again shows decline (5,831) and that by medical subordinates a similar fall of 1,984. This has been the case ever since it was rendered optional on the part of medical officers to perform vaccination, but probably the normal limit has now been reached, and in future years the figures will show only slight variations.

17. In cantonments 285 more cases have been operated on than was the case last year, and the cost of each case has increased by 3 pies.

18. The following table shows the inspection work done by deputy inspectors during the year:—

VACCINATION REPORT.

Circles.	Number of In- specting officers.		Number of villages visited.		Total number of persons vaccinated.	Number of days spent on inspection duty.	Number of cases verified.		Total number of cases inspected by deputy inspectors of all sorts.	Total number of successful cases inspected by deputy inspectors.	Percentage of successful cases to total number inspected as reported by deputy inspectors.	Proportion per cent. of inspection to total number vaccinated.

From the above it will be seen that 9 deputy inspectors have failed to verify 50 per cent. of the cases operated on in their circles. Their explanations have been called for and their cases will be dealt with in accordance therewith. The following are the circles in which the failures occurred: Calicut (25.9 per cent.), Trichinopoly (31.6 per cent.), Chatrapur (35.3 per cent.), No. 1 South Canara (38.1 per cent.), Masulipatam (40 per cent.), Cuddalore (41.5 per cent.), East Coimbatore (43.5 per cent.), Tinnevely (45.3 per cent.), and Bellary (47.8 per cent.).

19. The following tables show the results of 'calf-to-arm' vaccination; operations performed with animal lymph sent out in tubes; glycerine paste and lanoline paste. Fresh calf vaccine shows as usual the greatest percentage of success, viz., 97.2; then comes vaccine sent out in glass without any preservative, then lanoline paste, and lastly glycerine, with 94.6, 94, and 88.9 respectively. The reason why such a high percentage of success is shown in the case of pure vaccine issued in glass is that it is invariably used at once; not, as might be

imagined, that it keeps its activity longer in this state than when mixed with a preservative, such as lanoline, vaseline or glycerine. Two districts used lanoline, viz., Bellary supplied from the Mysore Government Vaccine Institute, with a success of 92.3 per cent.; and South Canara, which manufactured its own paste, with a percentage success of 95.3:—

23. Human lymph has not been used in any district, except in the case of the Ganjam Hill Tracts where 226 were done by this means.

24. During the year 12,218 deaths from small-pox have been reported, or 5,778 more than last year. The majority of cases occurred in the Ganjam district. In this connection I would again bring to notice that the Revenue Board's Standing Order No. 195 has, in many cases, not been given effect to, so that it has happened that outbreaks of disease have occurred, and the deputy inspector has been in ignorance of it. It would, therefore, be desirable again to call the attention of the Revenue authorities to the importance of this matter.

25. In accordance with G.O., No. 523, Public, dated 6th July 1893, the attached diagrams have been prepared to show the effects of protection on the death rates from small-pox in each district and municipality. The figures are for ten years, and it is encouraging to note that, since these diagrams were instituted in the report for 1893-94, the 'mean' lines representing the proportion protected and the deaths from small-pox respectively have separated considerably, thus proving that real advance has been made. As formerly pointed out, the effect of the diagrams is somewhat spoilt by defective registration in Government villages, and by the non-existence of registration in large tracts from which vaccination returns are received.

26. In connection with statement 5 in the appendix, I think it right to observe that the high percentage of success found on inspection by many District Medical and Sanitary officers and Civil Surgeons is, no doubt, due to the fact that their investigations are largely confined now to municipalities and consist to a considerable extent of cases brought to the hospitals for verification by the parents, the vaccinators taking care that few unsuccessful ones are presented. Of 582 school-children examined by me during the year, 46 or 7.9 per cent. were unprotected and 78 or 13.4 per cent. marked by small-pox. I examined 1,311 children of the general population and found that 166 or 12.7 per cent. were unprotected and 135 or 10.3 per cent. marked by small-pox. From vaccinators' registers 978 cases were verified, of which 780 or 79.8 per cent. proved to be successful; practically the same proportion as the mean of the three previous years—*vide* table on page 2 of last annual report.

27. During the year two deputy inspectors have retired and two died; two have been suspended for six and one for three months for serious irregularities, while ten have been fined for less serious offences.

28. The service books of all deputy inspectors have been brought up to date, with the exception of two newly-appointed men.

I have the honour to be,

Sir,

Your most obedient servant,

W. B. BANNERMAN, M.D., B.Sc., Surgn.-Major, I.M.S.,

Inspector of Vaccination and

Deputy Sanitary Commissioner, Madras.

APPENDIX.

VACCINATION RETURNS.
