BOARD OF REVENUE (REV. SETT., L. RDS. AND AGRI.), 19TH JAN. 1897, No. 40.

PROCEEDINGS OF THE BOARD OF REVENUE (REVENUE SETTLEMENT, LAND RECORDS AND AGRICULTURE).

READ—again the following telegram from the Secretary to the Commissioner of Revenue Settlement, Land Records and Agriculture, to the Special Deputy Collector, Kurnool-Cuddapah Canal, Kurnool, dated 2nd January 1897 :—

“Please send by the 5th current, without fail, approximate talukwar particulars of areas under several crops under canal.”

READ—the following letter from M.R.Ry. K. SUBBARAYUDU PANTULU Garu, Rao Bahadur, Special Deputy Collector, Kurnool-Cuddapah Canal, to the Secretary to the Commissioner of Revenue Settlement, Land Records and Agriculture, dated Camp Vanala, 5th January 1897, No. 2 :—

Referring to Board's telegram, dated the 2nd instant, just received by me here, I beg to submit herewith a statement showing talukwar approximate particulars of areas cultivated with crops of different rates and served by the canal this year, up to the end of December last, according to the latest returns received from Canal Revenue Inspectors and information collected by me personally after inspection of some of the important canal villages. It is only for crops of different rates that information is now available in the special office, and I am sorry that I am not now in a position to furnish cropwar particulars for all the figures shown in the statement.

2. It will be observed from the statement that, of the total extent of acres 74,685·10 shown therein, acres 5,175 represent area cultivated mainly with paddy under canal-fed tanks, and the extent irrigated *directly* under the canal thus comes to acres 69,510·10. A great deal more, however, is expected to come on gradually to be added to the latter figure as the result of the inspection and “azmoish” now going on is known from week to week, and as information is received as regards second crops now being sown; and my own humble opinion is that there will be at least another 10,000 acres more in all to be added to the above *direct* irrigation figure before March next. The inspections that I have been personally conducting show that ryots have, in many cases, actually taken water for larger extents than those applied for by them, and as the “azmoish” of several of the canal villages has yet to be done, the actual increase above the present total figure may even finally exceed the 10,000 acres now roughly estimated.

ENCLOSURE.

STATEMENT showing the extent which applied for or used canal water down to the end of December 1896 under the Kurnool-Cuddapah Canal.

District.	Taluka.	Rs. 6.	Rs. 4.		Rs. 3.	Rs. 2.	Rs. 1.	Total.

Secretary.

READ—also the following letter from M R.Ry. K. SUBBARAYUDU PANTULU Garu, Rao Bahadur, Special Deputy Collector, Kurnool-Cuddapah Canal, to the Secretary to the Commissioner of Revenue Settlement, Land Records and Agriculture, dated Camp Vanala, 8th January 1897, No. 3:—

Referring to Board's Proceedings, Mis. No. 5170, dated the 22nd October last, I have the honour to submit herewith a statement showing talukwar the approximate extents which applied for or used canal water for different rates of crops down to the end of December last; and it will be observed from this statement that, including acres 5,175 irrigated through canal-fed tanks, the canal has served in all acres 74,685-10 this year down to the above-mentioned date. The total extent of dry crops served is acres 43,762-1; and, of this, acres 33,008-82 appertain to the Kurnool district, and the remaining acres 4,753-19 to Cuddapah.

2. The "azmoish" or inspection of canal-irrigated extents is going on, and these inspections and second crops raised and yet to be raised under the canal are expected to bring on some more extent to be added to the above figures; and my own humble opinion is that, in all, there may be a further increase of about acres 10,000 before the close of March next. The time for sowing second crop or dry season indigo in the Cuddapah district is not yet come; and, provided the supply in the canal which is now ample everywhere continues to be so till about the middle of March next, I think we may expect some thousands of acres within the Cuddapah district limits of the canal under that one crop alone.

3. All the canal-fed tanks have been filled in again for second crops, and there is enough supply of water in the canal all along. Standing crops under the canal are reported to be in good condition everywhere.

RESOLUTION—dated 19th January 1897, No. 40.

Recorded.

2. So far as can be gathered from the return submitted, the area irrigated by the canal may be classed as follows:—
