Proceedings of the Board of Revenue

(Separate Revenue),

Dated 30th April 1898.

His No. 1810

Resolution

Volume
Index

The results of the moisture tests conducted with reference to Board's Proceedings No. 234, dated 14th June 1897, are to a certain extent inconclusive owing to the absence of information; firstly as to the humidity of the atmosphere while the salt was drying and on the day in which the sample was taken, Secondly as to the percentage of moisture in the salt during that period and subsequently. To supply these deficiencies the Board proposes to send the Sub-Inspector who has conducted the tests at the Depot with the necessary apparatus for testing the moisture in the salt and the humidity in the atmosphere to a selected factory with instructions to take tests of both, the salt being of selected heaps left on the drying

drying grounds for a period of twenty or twenty five days. The samples tested should not be taken from the outside of the heaps but from the inside and should be taken from a different place everyday but under conditions as nearly similar as possible. It will then be able to see by comparing the daily record at what stage approximately the salt may be said to have thrown off the greater part of the moisture which it brought with it from the pans.

2. The Krishnapatnam factory will be selected for purposes of the test and the Inspector will be requested to ^{give} his special attention to the same and to do what he can to ensure accurate results
