With reference to No 238 d/20
April 1898 transferring with
Pub Works Dept Revenue Board
Proceedings to 92 d/24 Feb 1898
I fear the estimate of Revenue
which would show a bare 4 per
Cent is not sufficient to secure
the sanction of the Khassani
Project and it may be necessary
to arrange for irrigating some new
land. The Collector also states
in his letter printed with the
Board's Proceedings that if water
can be let down from the Khassani
Reservoir to supply tanks in
Manaypur & Patankottan there

will probably be a considerable addition to the double crop irrigation in these two taluqs. It would however be impossible to appropriate Khairani water for any particular tract. The main state is that by storing flood water for use when the natural supply runs short and by the construction of regulators for the better distribution of water, the whole condition of the irrigation of the district will be so improved that some small extension of the irrigated area is justifiable. There is no land in cultivation or district which can be irrigated without very great expense but in Tanjore there is a very large area of country commanded by the proposed Pattukottai cut between its head and the proposed tanks. Col Smith has shown this area (coloured burnt red) on the three taluq maps sent herewith. The whole area is 14000 acres of which 22000 are already irrigated (13000 by the Vadam and 9000 by tanks). Of the unirrigated area the village officers state that 5000 would be taken up for irrigation if water were made available. I should be obliged if you can obtain an authoritative estimate of the area which would be taken up and the revenue which might be expected. Complete lists have been taken over three months of the

area and the irrigable lands can be pointed out at once to the investigating officers. Before the revenue estimate for the year is completed the irrigable area in the Vadam will be ~~estimated~~ ^{ascertained} - the commandable lands will be included in the village maps and Col Smith will arrange in communication with the collector to give all information required -
