[illegible] they are but partly interested for the cost of taking which they undertook in the excavation of the channel which is nearly 3 miles in length from the anikat to the head of the arisan tank into which it flows.

The Shotraygundam represented that previous to the construction of the stone anikat a temporary dam of mud was laid across the river lower down, about 2 miles, to irrigate the deficiency for irrigation at different periods. The average area capable of being irrigated by the tank alone has thus been calculated upon the poor cultivation of 1800 kulies by which no channel existed. This average it will be perceived from the abstract of the Karis 45-- or Karis 27-12-- above the Poonja's register of the Village. This excess may be said to consist partly of Poonja's poonumpoke (2-4-0) reclaimed & dry poonpoke cannot into "wet" (about Karis 25-0-).

I have included the charges for repairs, which the cost of the anikat will for the years to succeed of Fasly 1236, when the permanent work was completed, the charges for maintenance of both the sources of irrigation have been admitted.

The charges of establishment not appear to be somewhat large, but consist the head work of irrigation construction & the removal of waste reclaimed which a permanent poonja resource has been secured to put instead of a scanty supply for poor cultivation calculated for the Shotrayguns generally. I was induced to allow the accounts pucka of the Shotrayguns to stand as there is clearly an increased yield for cultivation in the Village.

The valuation of the grant has been established both by deeds & acts & the title of the present holders proved. The name of each was duly entered in the Collectorate Register on the 1st day 1829- To be confirmed to the parties in the Sunnud of Rs. 1039-- (one thousand & nine Rupees) Combined Quit Rent Rs. 109-- (one hundred & nine Rupees) yearly Rs. 1143--

25/9/61 [illegible]

Fair copied.
