Register No 453459
 and 453
 496

I find on the three Darnoonams in the Zamindari of Ramnagar. They were granted by the Zamindar in 1811 to the person for subsistence. There are no hereditary grants. There are no interrupted possession of these lands since the date of the grant. No Patta is made. These Villages are supported by the accounts of 1812. These Villages were granted on one of the same date. In the Accounts of 1811 & 1815 there are no of these Villages are given in Patta. In the Accounts Register of A.D. 1815, Porupur Dore is entered in Patta. Hence the three Villages are given on one of the same Register at the request of the holders thereof. In the Account of July 1816 & 1817, the area of these 3 Villages are given distinctly. But Patta entries are not considered. These Villages are contiguous to each other. The lands are undivided. These 3 Villages are 36, 37, 38 & the total of these 3 Villages is 36. Further into the Villages - Porupur paid on the numbering Villages equally & permanently. The document produced a Patta certificate bearing the signature of the late Registrar of the Patta Court, dated 22 October 1807 showing that gift was registered in that office. But it is not discernible from the said certificate to what Village or to what lands does that document relate. The persons of 1816 say that it relates to the three Villages under settlement. No Patta was about the area or about the boundaries on the part of Ramnagar. Hence the area of 357 Patta is confirmed here. The boundaries are given separately for these 3 Villages now in vernacular Register correspond with those entered in the account of 1816.

II The persons of 1816 are Coparceners descendants of the Original Grantee & others are absentees - (The number)

Valuation of the 3 Villages in Settlement.

1 Wet lands depend upon 3 Tanks. Of these one is large & two are small. The defensants of these have another small tank - All of these are in repair.
These tanks are fed by Pandur, an affluent of Jangal stream. The pump is claimed to draw water from the well at 29 feet as per statement of the
But the former & the latter are of long waste from want of repairs so that all the lands are felt to be fullwatered & that the water will be brought under
plough gradually within 5 or 6 years. The whole claimed area is 694 acres of which 465 acres are fullwatered lands. In enquiring thoroughly about the
details of waste &c, they admitted themselves that the waste area was 465 acres & that the fullwatered area was 94 acres. This is supported by the account which they
had in their hands. This account is prepared at Ramnad Jath's settlement. Drylands seem to be waste lands of about 15 or 20 years. In the old
half of the land. Raised or waste may be said as the area lying waste from want of repairs. The village is in the hands of "Nat Katar" Jathis.
They will improve it very shortly. The neighbouring villages are important ones. These villages under settlement are on the border of Manganga
peonies any. Soil is of medium fertility generally. In detail there are some fertile & some inferior lands. Generally 20 or 25 acres yield are
fullwatered 2 times. This year the Marudayanna committee put 30 acres of wheat are fullwatered 2 times. No famine is raised. The Village is fertile
but it is not in a prosperous state from want of care on the part of the former holders of the same. The Tanks are covered. They have good sufficing
channel to feed them. Wet lands are fullwatered 2 to 3 times of the wet area. Dry lands are lying waste though the soil is good. There is much
room in this village for improvement by bringing dry lands under plough & by improving the Tanks. Scarcity of water is felt occasionally.
I have no materials to enter here the arrangement of the adjacent ~~villages~~ drylands that are either on sharing system.
There are near dry lands in the vicinity of the village even to find out the dry rules. However as the dry lands are of long waste, I would charge
the townships to deposit the average returns of the village as proof of the fact of 16 or 20 years. This is not later.
In consideration of the fertility of soil, I present the valuation as follows with regard to the 86-
