

100/1580

of the Darmasans in the pendency of Ramadpurn. He was granted by Pururasa, full grant of small several份 of land in the name of Bhavani Kona Rama Raja, only the ancestor of the Purry of Ramad, to one Lockyer, one of the ancestors of the persons of 16 for cultus. This is a permanent grant. It is in unbroken possession of its holders since the date of the grant. Her last name is Potta. It was 8 at the Darmasans in 1800. The area of 12 Acres & 66 fathoms. The accounts in 1812. No Takara about the area or about the boundaries on the part of the Rany's Vakil. However the area of 12 Acres & 66 fathoms is confirmed here. The crops lands are situated within the proper limits of the Village. His Village was omitted from the account of the 1800 were then waste & unfit for cultivation. It is satisfactorily proved by the tradition &c. that the persons of 16 are descendants of the Grants. As several generations passed between the year of 16 & those mentioned in the accounts in 1814 & 18, the form are unable to describe their relationship with the latter.

relationships with the latter -
 ¶ One "Linga Seven" purchased the Village from the persons of ob. in AD 1862 on two occasions for Rupees 2743 - Two bills are on stamp paper
 Transaction proved to be bonafide but as the Village is in possession of a mortgagee & as the mortgagee objection to putting the Village in possession
 of the purchaser, it was directed by the Ag. Income Commissioners to register the Village in the names of the seller, who are the persons in ob.
 on the ground that the sale is not yet complete. The purchaser expressed his inability to obtain the possession of the Village through all the court records, &
 the Commission was made known to him - (vide next vol)

III Wet lands in the Village of Kannonkata
 It is fed by single stream. The soil is generally
 influential one. The purpose of being that the dry lands are
 are not being uncultivated, but they are kept waste occasionally. The
 Government who prepared the vernacular Register of the Village purposely entered some
 of the Dry lands as waste. Wet lands are cultivated to some extent.
 Soil is of medium character generally. Rainfall is moderate. Quantity of
 Water is fit for some purposes. This is of course occasional. There are no
 materials to enter the average assessment of the neighbouring wet lands
 that are settled on sharing system - by the Government. The average dry rates of
 the adjacent High Village of Bunganpurum is at 0 M 10 per acre.
 But as there are some dry lands that are not cultivated occasionally -
 I will charge the dry area in consideration of that in wet area -
 The average net income of the Village, as is 35 rupees per annum as per
 statement of the p. 0/6. This is not true. In consideration of the fertility of
 soil & I frame the valuation of the Village as follows -

Wet full water } 24% at 40 rupees per acre = 98000
 Wet Waste - }
 Dry full water } 25000
 Dry Waste - } 123500
