Valuation

1 Wet lands depend on two Tanks. They are fed by Jungle Streams. The Tanks are covered
 - The lands are covered by jungle & are as waste are gone - on two years standing - I am not
 - necessity of clearing such land as waste. In fact there are no waste lands in this village.
 - Soil is not of a very superior quality. Wet lands are cultivated 2 times occasionally. However it appears
 that some of the lands are left waste from want of water & occasionally. No Tank is raised. If any
 is not raised. On the whole the village is in flourishing state. The average of soil as well as of grain
 Talags are given in the margin. The average profits as per statement of the Mahajamams are
 116-8-0. After the cost of paper 52-8-0 & other charges of paper 10 are deducted, the net
 profits are 64-0-0. There is very low & unfair with reference to the fertility of soil. I propose to
 valuation as follows of ten waterless lands with the aid of the Mahajamams. The average value of
 District are very high & on the other hand the net profits after deducting the Mahajamams are very low.
