

(This is one of the Darmasaram Village situated within the limits of the perrumary of Kannad. It was granted by the person No 1 to the person No 2 for maintenance. This is a hereditary grant. This is in unbroken possession of its holders since the date of the grant. This name Patta^{No} 20 was lost. From the English account of A.D. 1855 it appears that this was granted by Purusa Pakkradyt two hundred years ago. This is true - The grant was renewed in A.D. 1725. This Village consists of 8 equal Vallies. They are enjoyed as follows in the margin. The Village is supported by the accounts of No 12. The person No 2 of 16 is a descendant of the Original Grantee. But at the person No 13 is the 15 or 16 ancestor of the person No 2 of 16, he cannot describe the relationship. This fact is proved satisfactorily. The person No 1 of 16 purchased land in A.D. 1834 & 1839 for Rs 775-7 from Muddiga, Subramana, Ganga & Lawmy of Adaverga - descendants of the Original Grantee. Three Vellies each are on stamp paper. Transactions proved like Bonefide-Engagement proved. The sellers themselves are alive. They admit the transaction.

1. & 2. The increase is very slight. The perrumary Vallies first no fault

II. The area of the Village corresponds to that given in the record of 1211 & the increase is nearly 1/2 of the original area. Hence the area of 69 acres is confirmed here. The Village has no hamlets or hamlets.

with the Lounis. Hence the area of 99 acres is confirmed.

III. Wet lands depend upon a small tank. It is fed by the tank of Pulari in Ayer village. No waste in this tank - not a very large tank. In fact there are no waste lands even in Day area - Wet lands are not cultivated twice. Soil ~~is~~ ^{not} of a very heavy nature. The average yield per acre of the village are 30 tons - some are lost. This is not very fair - though not quite false. Average yield of food as well as of grain greatly. The average yield per acre of the village are 30 tons - some are lost. This is not very fair - though not quite false. Average yield of food as well as of grain greatly.

The yield of the Pulari tank are very high. These are lands are not so rich as the Pulari tank. The yield of the Pulari tank are very high. These are lands are not so rich as the Pulari tank.
