(Continued from page 2) Wet lands depend upon 3 Tanks. One is large & 2 are small. They are fed by the Tanks of Muradnoid (Agar Taluk) Pakkalam (Darmasam) and the Mahaganam. It is said there was another small Tank which was felt in 1850 & 1851. The appearance of these Tanks are not visible. They say that an average of 7 acres of Wet land is cultivated annually during the last 10 years, that 16 acres are of 30 years waste, & that 50 acres of Dry & 60 acres of Wet land are in Preamble on the lands irrigated with salt & attests unfit for cultivation. They say that these lands are of 50 years waste. If I ~~accept~~ accept such statements, it will give room to augment the ground, I state the Mahaganam that the 110 acres thus devoted will be excluded from the ~~system~~ of the Village if they are really unfit for cultivation. They accordingly wrote a remark on the Form in the register that these lands are unfit for cultivation. In this case, I think God should have a right in these lands if they found to be under plough on any future occasion. The Mahaganam of the neighbouring Villages whom I have inquired into say that the statements of the period 50 are not untrue. Some of the Wet lands are cultivated 2 times. Soil is not of a very superior quality generally. Some of the lands are irrigated with salt as the Village is on the sea. Some of the sea water inundates some of the lands occasionally. No Tank or Panapine are visible in these lands. The average profits of the Village as per statement of the Village are Rs. 11. - of these of the Total of Rs. 80 is deducted, the net profits are 69. - This is very ~~very~~ low. I calculate the value of the Village as follows as the ~~net~~ net profits reported to be by the Village are very low. If 7 acres of Wet land are cultivated annually on an average. 50 acres producing ^{at 3 per Ratta} Ratta of grain. Of these Melwaram is 75 Ratta. No Melwaram is ^{levied} levied in the Village. For 75 Ratta at 2 1/2 annas per Ratta, ^{the} the average price of the last 15 years, the value comes to 187-8. - If these if the Total is deducted the net profits are 82 annas. This is very liberal calculation. I have inquired into the Village named by the person who says that these lands are not of a very superior quality. I give the value of the Village as 187-4 annas.
