Valuation
 Wet land depend upon one Tank of moderate size It is fed by one of the branch channels of Parakayar. The Tank is round & the supplying channel is an influential one. The distance from the Tank to the waste is 60 Akus of land. It is proved that they are 4 years uncultivated lands, that this was owing to scarcity of rains; that they cut a channel from the river Parakayar last year at an outlay of 10000 rupees & that all the lands will be cultivated in future.

Very far away
 H. J.

It is true that the channel is full this year - but there is no water
 to such an extent as 60 years - Many out all the lands will be -
 brought under full water sweet water channel is full - The Dry lands 24 Sundars
 are in the Kolar for statement of the Mahajans - well known not
 full water & time up to this day - Hereafter, some may be full water with the
 of the reach of the new channel - Soil is of a medium character generally -
 The Mahajans say that the water in the ~~river~~ river is brackish -
 & that therefore the crops are languished. The seems to be true to some extent -
 Water is sweet in rainy weather but in hot season, water is somewhat -
 saltish. Some of the full water say that sweet water is not suited well for
 cultivation. I have no materials to enter the average rates of assessment -
 of the neighbouring wet lands but are settled on sharing system. The average
 Dry rates of assessment of Mandur & Vayalur (Ayen Village) are at 126 -
 per acre. These villages are situated at a distance of one or two miles from -
 the Damisamam water settlement. Here are Damisamam village
 of the lands under settlement - The average income of the village as per
 statement of the ~~the~~ Mahajans who attended this settlement is
 126 - 50 - per annum. This is not fair or true. Dry lands are not equal to
 the neighbouring Ayen lands. After weighing the nature of soil, the influence of
 the source of irrigation, I frame the valuation as shown below

* Deducted amount of 95 Annas at 30 paise per anna - 285
 produces 1/2 panna
 as Mahajans & I
 will settle grain
 at 20 paise per panna
 Dry 38 Acker at 6 paise per acre - 144 -
 15.8 633
 429

Dry lands are changed at 6 paise per acre.
 with reference to the full water & water price -
 or in other words that the Dry lands are
 charged with a light assessment as there
 are some waste lands. Hence - 144
