Valuation

III. Wet lands depend upon a small tank. It is fed by Jungle Streams. The H. 16 says that the Dry & Wet lands flower as waste are - Mottled. This is somewhat true & not true with full extent as it appears by the results of my enquiry. The Wet lands are not full extent 80 times. This year is not full extent in this year. The Village is in flowering state. The surrounding Village are in flowering state. The Field is in repair. Soil is of a medium basalt generally. Scarcity of water is felt occasionally. I have no materials to enter here the average amount of the neighboring village of Singallat at 17 per Acre. The average amount of the neighboring village of Singallat at 17 per Acre as per statement of the Village. This is not true in consideration of the fertility of soil. I frame the valuation of the Village as follows.

Wet 22 A at 3 1/2 per Acre 77
Wet 17 A at 2 D D D 34
Total 111-0-0

Note: As some of the Dry lands are not full extent annually, the amount is changed for the Dry lands.

Dry 86 Acres, including of Chavara at 6 1/2 per Acre } 52 1/2

Total 163-4-0
