Note: As there are some waste lands though not to such an extent as needed to be by the Madhyamans, the Dry lands are charged with a light assessment.

Valuation

(Continued from page) Wet lands depend upon two tenths of one is large & another is small. They are in repair. They are fed by the Tanks & waste water of the adjacent Villages. The supplying channels hardly fail to feed the Tanks with the Dammasaram. The persons say that all the tanks & Dry lands are fit for cultivation & that the Dry & wet lands cleared as waste are not cultivated. & that there are also some waste lands of 4 or 5 years standing there. There are a few waste lands in this village as it appears from the statement of that pt. 6. Wet lands are not cultivated 2 times in any year as reported by the persons of 6. Soil is not of a superior quality generally. It is of a medium kind. Generally, fertility of soil is felt occasionally. Famine is caused in the village. There are materials to enter here the average assessment of the neighbouring lands. That are settled on sharing of profits. Revenue is no fixed thing in the village. The Dammasaram under settlement. But the revenue is collected on the lands in the village situated at a distance of some miles from the Dammasaram. For acre average profits of the village as per statement of the pt. 6 are 7. For per annum there is quite a lot. The reference to the fertility of soil & from the valuation of the village as follows in the aid of the Madhyamans. There are very valuable Dammasarams around the village that were already settled by them. The village also is in flourishing state & consists of good lands generally. The village had two good Tanks with a good supplying channel. The soil is good & most of the lands are cultivated annually.

I wet 6 9/4 per acre at 3 1/2 per acre - 173-14-0
 1 Dry 6 9/4 per acre at 6 1/2 per acre - 18-10-0
 Total - 191-14-0
