This image shows a blank, aged, yellowish-brown page, likely an endpaper or flyleaf of a book. The paper has a textured appearance with some minor discoloration and small dark spots, possibly due to age or handling. A vertical crease is visible on the left edge, suggesting it was once part of a bound volume.

Salutation -

- Wet lands depend upon one Tank. It is small in size. It is in repair. It is fertile -  
a Single Stream & by the Wastelaking River, contiguous Ayen Village -  
The Land is fertilized annually. Scarcity of Water is felt occasionally - The Mehazans  
say that Dry & Wet lands of Plassed as waste are full water sometimes & sometimes as -  
Matted. I don't know why they must flaps such lands as waste - It appears from  
the individual statements that there is some exaggeration in the matter of Waste -  
Wet lands are not full water & time - Dry & Wet soil is not of a superior quality -  
I have no materials to enter here the average assessment of the contiguous Ayen  
Villages. The average income of the Village as per statement of the Mehazans is  
50 Rupees per annum. The Dry average assessment of the adjacent Ayen lands -  
comes to 12 Rs per acre. In consideration of the fertility of soil & I frame the valuation  
of the Village as follows -

Wet 17 are cultivated once annually at  $3\frac{1}{2}$  Ropes per acre - 598

Wet. 8 shins Waste gr. at 2 Ropes per acre ——— 16 —

Lotul. 75-8

Dry 30 Acres at  $\frac{9}{4}$  Rupees per acre 228

Dry 22  $\frac{1}{4}$  ct. Warts  $\frac{1}{4}$  P. per an 22 8  
5 70
