Sheet No 582

1 This is one of the Jaitans in the pemuang of Ramadpuren. This was granted by the pemuang of 011 to the pemuang of 013 to render medical aid - as it is seen from the accounts of A.D. 1815. It is not known to whom the Doctor is to render medical aid - It appears by tradition that the person of 010 & his son & Grandson used to treat people & the pemuang. The pemuang of 013 appeared before me first in person though they reported a Takkal ultimately. They say that the last person who was the Doctor in their family was their Grandfather & that neither they nor their father ~~the~~ knew any thing about medicines &c. They say the service was discontinued so far back as 20 years. The object of the grant being a service tenure & the service being discontinued 20 years ago, I recommended to confirm the Village up with the person of 016 on 1/4 of assessment. This Village is entered in the Board's Register No. 10 known about the area over about the boundaries on the part of the Pany Tal Kael. Since the area of 111 1/4 there is confirmed here. The H of 013 are descendants of the Original Grantee - They say of the Village as shown in the map. The lands were divided long ago. They are not liable to periodical exchanges - Pong is paid on the number of shares equally - It is sound in strength. It is fed by a river flowing by the name of Tuff or - 10 years ago. & the other are -

II Wet lands depend upon a lack of moderate size - It is
- There is an irregular stream - The V. Keel of the p. 66 says that the wet lands of limited as waste are not of
- Mottled. It is usual to cut the lands annually full water as Mottled. On the land full water occasionally - Most of the lands are
- Full water annually - Part is of a medium hardness generally - Wet lands are not full water 2 times - I have no estimate of water here the
Average annual of the adjacent Ag. on lands - Average
Average annual of the V. Keel are 12073
or 12073 as per the V. Keel are 12073
