The Pott of the 913/4 Villages forming Perungarai Vallam -
 is engraved on a stone in the form of a tablet in the Salug
 Valambor

• Wet lands depend upon one small tank. It is in repair partially. It is fed by a single stream. A tank is filled annually. Security of water is felt in some years.
 • The Mahajans say that the Dry & Wet lands placed as waste are cultivated & they honestly say though they pass some lands as waste, but they are no longer cultivated lands in the village. Wet lands are not cultivated 2 times in the village.
 • Nanjole & Perijole lands are of a medium character generally. I have no means to enter here the average assessment of the adjacent Agri lands. The average Dry assessment of the adjacent Agri lands comes to 70 paise per acre. The average income of the Agri village is 70 paise per acre. The statement of the Mahajans is 70 paise per acre. This is very low. In consideration of the fertility of soil & I give the valuation of the village as follows -
 • 29 1/2 % of Wet full water at 3 1/2 paise per acre = 101-8
 • 6 1/2 % of Wet full water at 10 paise per acre = 68
 • 64 % of Dry full water at 10 paise per acre = 64
 Total = 233-6
