X of water is felt in some years. The mahajans say, that the wet and dry lands classed as waste are not so. This is an exaggeration and appears from the individual statement of the mahajans. The policy of the mahajans of this part of the country is generally to class some waste and cultivated lands as Barambikes and some as waste, addition to their pleadings that the lands classed as cultivated land are of an inferior quality. Wet lands are not cultivated 2nd time. Wet or dry ~~land~~ soil is of a medium character generally. Harvest is moderate.

I have no materials to enter here the average assessment of the adjacent wet Hyam lands. The average wet of the Taluk, in which the Hyam lands under assessment is situated is given in the margin of the next table. This average is high. The dry average assessment of the adjacent Hyam lands do not exceed 12 Annas per acre. The income of the village at present statement of the mahajans is 92 Rs. per annum. This is not true, but serious fraud. In consideration of the fertility of soil etc., I frame the valuation of the village as follows -

Wet 40 acres cultivated annually @ 4 Rs. per acre	Rs. 160-0-0
Wet 18 acres waste cultivated etc., @ 2 Rs. per acre	36-0-0
Total	196-0-0
Dry 100 acres @ 12 Annas per acre	75-0-0
Dry 70 acres cultivated, waste etc. @ 1/2 Rupee per acre	17-8-0
Total	92-8-0
Grand Total	288-8-0
Rate of Government Sale per acre	Average rate of good Salug per acre
Maximum Minimum	Dry 1-5-6
Dry 3-2-9 0-1-7	Wet 4-6-1
Wet 10-13-3 0-5-9.	

Details of average income of the last 15 years of the villages in the Aurangabad Taluk of Ramed Estate.
