*R. D.*

Wet lands are irrigated by one Tank of moderate size. It is a super - The tank  
is fed by fresh water of Kattavallath, partly open & partly Damassan.  
The Tank is filled annually - The Mahots says that the Dry is common real work  
lands & that wet lands is of 10 years uncultivated lands - This is not much to be depended  
Very few ~~wet~~ lands are full watered & true occasionally - Soil of a superior  
quality generally - The Village is in good state - Security of Sale is not much felt -  
There are no materials to entice the average <sup>old & new</sup> assessment of the neighbouring  
of the lands - The average wet assessment of the Village is whether the Damassan  
is situated in <sup>the</sup> ~~in~~ <sup>the</sup> margin - The average assessment is higher  
- The minimum & maximum Village Dry rates are given in the margin - Average  
income of the Village as reported by the holders of the Village is 158 rupees per  
annum - There is not time enough to not very low - After weighing the probability of  
with you, I frame the valuation of the Village as follows -

17<sup>3</sup>/<sub>2</sub> lbs of Dye being immemorial waste  
at 6 cts per lb

Plus - 229 8-0  
 } 47-  
 Total - 233 15-0
