II Wet lands depend upon one Tank of moderate size - It is supplied by Jungle Streams & The Tank is filled annually. Scarcity of Water is not much felt - nor generally felt - The holders of the Village claimed $10\frac{1}{2}$ acres of wet & $62\frac{1}{2}$ acres of Dry as waste & stated that they are of 2 or 3 years waste from want of water & - The Mahajanams have both Melaram & Kudwaram right in the Village - This will not be found in other Darn areas as there ^{is} those in forming Pernagarani Pattana - The lands left as waste for 2 or 3 years waste are not to be claimed as waste - In reality there will be no large extent of Waste - when the Mahajans are 2 or 3 waste - Wet lands are not cultivated 2 times - Wet soil is of a mixed inferior character - & Dry soil is of a superior quality generally - I have no materials to substantiate the average assessment of the adjacent Super Villages. In fact there are no Agent Villages in the vicinity of this Pernagarani under settlement - The Dry assessment of the Tanks in which the Village under settlement is situated is fair - The average income of the Village as per statement of the 18th is 60 Rs per annum This is not true - In consideration of the above circumstances I frame the valuation of the Village as follows -

- Wet 18 acres - Cultivated annually at $\frac{3}{4}$ Rs per acre	63
- Wet 10 acres - 2 or 3 years waste & at 20 Rs per acre	20
- Dry 80 acres at $\frac{3}{4}$ Rs per acre	45
- Dry $36\frac{3}{4}$ acres of an inferior quality & of 2 or 3 years waste at $\frac{1}{2}$ Rs per acre	18-12
- 6 Rs per acre	58-12
