

Register 50.112

Sheet 129

II The persons of 186 are not any way related to the H. 16. The person of 1-2-3-4-7-8-9-10 & H. 16 filed that their ancestors purchased the entire thing long ago in a lump for \$507 - from the descendants of the Original Grantee - & that the Bill of sale was destroyed by fire - forty years ago - There is not a slightest proof for this - He again says that the person of 15 is one of their ancestors - The H. 16 named one Narayanam as one of the persons who secured the Bill of sale was destroyed by fire - The person of 15 says that it was destroyed forty years ago while the witness says that it was destroyed 80 years ago - Hence the statements of the person of 16 proved to be false - Obviously it is proved that the thing is in possession of the H. 16 because the last half century - the period may be taken for forty or 50 years - because the witnesses have not reckoned regularly the number of years of enjoyment - It is not proved at all that the H. 15 is one of the forefathers of the H. 16. On the above circumstances, I recommend to confer the thing to the person of 16 on 7% of assessment of 700

 1270 21832

III In the English Register of D.D. 815 it is not stated who was Pullayen's partner in the village
 - He is mentioned down as the Original Grantee in that account.

IV The document of 15 Feb 16 purchased land in D.D. 1841 for 155-9-0 from the persons of
 Pullayen & his partner (as per paper)

V The father of the person of 15 Feb 16 purchased land in D.D. 1842 for 155-9-0 from one of the persons
 in the English Register of D.D. 815 of 15 Feb 16 purchased land in D.D. 1842 for 155-9-0 from one of the persons

VI Wet lands depend upon one large tank. It is fed by the tanks in the upper village
 - Pullayen & Mahayen. The tank in the upper village wrote a small note to the tank in the lower village
 - because of the tank in the upper village. I made enquiry about the tank in the lower village because it
 - Mahayen's own planing of the tank in the upper village as a tank in the lower village. The Mahayen's
 - say that they know of the tank in the upper village but they don't know much about the tank in the lower village
 - the village. The person says that the tank in the upper village is a tank in the lower village. The tank in the lower village
 - because the lands were washed away by the floods. There are no rivers in the vicinity of the village so as
 - to wash away the lands. Again the person's own statements go to prove that the lands are full of water
 - annually in full. Soil is of a medium quality generally. Wet lands are full of water 2 times 1/2 of the area
 - occasionally as per statement of the Mahayen. The average profit of the village as per statement of the
 - Mahayen is 38 per cent of the cost is deducted the net profits are 10-0-0. This is very low in
 - comparison to the average rate of profit as well as of the lands are given in the margin
 - they are somewhat high. The Mahayen failed to prove that the tank in the lower village is a tank in the lower village.

Lands from wet of 12 acres per mpph 21-0-0
 12 acres per mpph 30-0-0
 Dry 13 acres per mpph 6-0-0

I framed the calculation from the
 results of my enquiry into the Mahayen
 tank in the lower village. I think that the Mahayen
 will enable the revenue in
 authority, as per the
 long for the value is right.
 I think that the Mahayen
 will not aid much in
 authority to
 suggest the value.
