Register No 453459
 and 453
 453459

I find on the three Darnoonams in the Zamindari of Ramnagar. They were granted by the Zamindar in 1811 to the person for subsistence. There are no hereditary grants. There are no interrupted possession of these lands since the date of the grant. No Patta is made. These Villages are supported by the accounts of 1812. These Villages were granted on one of the same date. In the Accounts of 1811 & 1815 there of these Villages are given in lumps. In the Accounts Register of A.D. 1815, Porupur Dore is entered in ~~lump~~ ~~lump~~. Hence the three Villages are given on one of the same Register at the request of the holders thereof. In the Account of July 1816 of 1816, the area of these 3 Villages are given distinctly. But these entries are not considered as accurate. These Villages are contiguous to each other. The lands are undivided. These 3 Villages are 36, 37, 38 & the total of these 3 Villages is 36. Further into the Villages - Porupur paid on the numbering Villages equally & permanently. The description produced a ~~fact~~ ~~fact~~ certificate bearing the signature of the late Register of the village, dated 22 October 1807 showing that gift was registered in that office. But it is not discernible from the said certificate to what Village or to what lands does that document relate. The persons of 1816 say that it relates to the three Villages under settlement. No Talk was about the area or about the boundaries on the part of Ramji Sahib. Hence the area of 357 Ares is confirmed here. The boundaries are given separately for these 3 Villages now in vernacular Register correspond with those entered in the account of 1816.

II The persons of 1816 are Coparceners descendants of the Original Grantee & others are absentees - (The number)

Valuation of the 3 Villages in Settlement.

1 Wet lands depend upon 3 Tanks. Of these one is large & two are small. The dependant of these are and other small tanks - All of these are in repair. These Tanks are fed by Rain, and plentiful, regular flows. The pump. 16 ft. raised 64 Acers ^{at 7 feet of the sea} Wet lands & 29 Acers as dry lands of state. But the former & the latter are of long waste from want of repair, so that all the lands are fast to be fullwatered & that the water will be brought under plough gradually within 5 or 6 years. The 16 ft. raised - find 94 Acers of Wet as waste & 65 Acers as fullwatered lands. For enquiring thoroughly about the details of waste &c. they admitted themselves that the waste area is 65 Acers & that the fullwatered area is 94 Acers. This is supported by the account which they had in their hands. This account is prepared at Ramnad for the settlement. Dry lands seem to be waste lands of about 15 or 20 years - In the old lands half of the lands raised as waste may be said as the area lying waste from want of repair. The village is in the hands of "Nat. Katar" & others. They will improve it very shortly. The neighbouring villages are important ones. These villages under settlement are on the border of the village. The soil is of medium fertility generally. In detail there are some fertile & some inferior lands. Generally 20 or 25 Acers of land are fullwatered 2 times. This year the Madhavanna admitted that 30 Acers of land are fullwatered 2 times. No famine is raised. The Village is fertile but it is not in a prosperous state from want of care on the part of the former holders of the same. The Tanks are covered. They have good sufficing channels to feed them. Wet lands are fullwatered 2 times in 1/6 of the Wet Area. Dry lands are lying waste though the soil is good. There is much room in this Village for improvement by bringing Dry lands under plough & by improving the Tanks. Scarcity of water is felt occasionally. I have no materials to enter here the arrangement of the adjacent ^{of the} Dry lands that are either on sharing system. There are some Dry lands in the vicinity of the Village even to find out the Dry rules. However as the Dry lands are of long waste, I would charge the town with the defect. The average income of the Village as per statement of the pump is 16 or 209 Acers. This is not correct. In consideration of the fertility of soil, I give the valuation as follows with the pump of 16 ft.
