 N3 of 06 is dead and the person N1 of 06, who was her brother
 in addition to the death of the person N2 of 06

Valuation

U.7. Wet lands in these villages depend upon two tanks of moderate size. They are in repair. They are fed by the minor known by the name of Sinar & by the Western Water of the adjacent Ayer villages. The Tanks are filled annually. Scarcity of Water is not felt for the lands that are under plough. No Dry cultivated lands in the Village. Long Wet lands are cultivated annually 2 times. $\frac{1}{5}$ of the Wet area is said to be cultivated 2 times on an average. Mangal & ^{other} ~~other~~ ^{other} lands are of a superior quality generally. It is a red clay. The Village is in a flourishing state. The houses of the Village are placed between the Wet & dry lands as cultivated & waste lands respectively. They say that the Waste lands are cultivated occasionally & that are about 20 years uncultivated lands & that all these lands may be brought under plough in a short time. There is one canal along the Tanks in which these villages are situated and used for fertility & soil. The average income of these villages ~~is~~ is 135 Rupees per annum as per statement of the holders of the same. This is not true. The contiguous Ayer Village is. Pisin. The average Wet ~~is~~ assessment of that Village calculated for a period of 15 years previous to 1720 comes to 50 per annum. The soil of these villages may be placed on par with that of the Ayer Village as stated by the holders of the same. In consideration of the fertility of soil &c. I give the valuation of these villages as follows.

or 200
