VI. One Mathuramay Town claim $\frac{1}{2}$ Vethy from the persons of ... 16 on the ground that it has been mortgaged to them ...
 It is proved that by witnesses that the claimants and the $\frac{1}{2}$ Vethy ...
 started paper that the lands are in possession of the persons of ...
 admits the genuineness of the transaction. Hence the claim is rejected ...
 Husband of the Woman of 27/16 in the Village under settlement & in ...
 Vethy in Pungarai. These Vethys are of equal in area ...

Valuation

VII. Wet lands depend upon one tank of moderate size. It is irrigated. It is fed by the West Water & Temple Stream of the Devastanur Village of Palurur. The tank is filled annually. Scarcity of water is not much felt for the lands that are fallowed annually. The Alahazans say that the wet lands of 20 acres planted as waste are partly cultivated & partly waste fit to be fallowed. This is a usual representation. In enquiring the persons of 6 individuals they say that about 5 acres or 12 acres are left waste & the rest is fallowed annually. One of the wet lands are fallowed annually 2 times. Soil is not of a superior quality generally. No thing is fallowed in the Village. The fortynous of the Village is at Hengudi. The average wet assessment of that Village calculated for a period of 10 years from 1258 555 & from 1267 572 & in which detailed accounts are available, show come to 24 per acre. The Alahazans say that the lands of the Village under settlement are less in fertility than those in the fortynous of the Village. This seems to be true from the stand of the adjacent Villages. The average income of the Village as per statement of the Alahazans is 9 8 per annum. This is not true. In consideration of the fertility of soil & I frame the valuation of the Village as follows. The average wet assessment of the fortynous of the Village is high. The average wet assessment includes Double crop lands. In the Village under settlement it is said that a very few lands are fallowed 2 times.

Register No 250
 Sheet No. 307

Wet 30 Acres fallowed annually once & in full & partly 2 times at } 165-00
 5 1/2 open per acre
 Wet 11 3/4 Acres partly cultivated & partly fit to be fallowed at 2 open } 23-80
