

the Do. —
No. — the of grain of Redworm on wet lead in either
Pragana consisting of 429 Villages in Gummawarum Taluk
for the period of 16 years.

III. Wet lands depend upon our Lake of moderate size. It is in repair. It is fed by a single stream & by the waste water of the Paper Village of Thunders Bay. The Lake is fed annually. No scarcity of water is felt generally. No Talked of the Indians and of all any the 70% share of the land as waste are 7 or 8 years water that they are fit to be put in within the next 7 or 8 years. This is a usual story. The results of my enquiry show that there is not much waste in the Village. Some of the Wet lands are full water annually. 20 Wet Pongla lands are of a medium character generally. The water is moderate. No Pongla full than in this Village. The average income of the Village as per statement of the Village of the 1700 is 1500 Rupees per annum. This is not true. The Portuguese Paper Villages are in a period of 15 years previous

Neither - The average value assessment of the Village calculated for a period of 5 years
1770 comes to 55 12 1 per acre - I think this is a fair assessment - & somewhat lower
I frame the valuation of the Village as follows

In consideration of the fertility of soil & I frame the valuation of the Village as follows
The cost of the Village may be fixed on par with that of the same again Village.
It is estimated annually once & partly 2^d times { 873 18-2

and of the Village may be found in the following manner
- Oct. 65 paid full interest annually once & partly 2d time } 373 12
at 5 3/4 Rupees per acre }
11 months & 11 days } 375

Total - 403-12-0

Narrative
21-2-80.
