I deduced from the statement two papers produced by the two hegemons.

But arrive at the conclusion that the Village is the one
deducted from the appts upon which permanent settlement
was based & thus bring this under the settlement —
It appears from the census taken on the 9 Novr 1833 & the
Census in Part II of 1837 given Collection was
dated 5 August
1833 it appears that
the Village was once
attached with the
jurisdiction of
Providence & that
it was separated from
with gear to the
Bay Province by
reason that this is
an ancient grant
& that the account of
F7211 is not true.

Average Value of grain of Maluam or wet land in Nangin
 Mahanani consisting of Agre Villages in the Taluq of Tikhwanam
 for a period of 15 years

From Ft 1255 to Ft 1270	Cultivated area in Acres	Gross produce in bushels	Which yamidois share at 45 percent	Average price of grain per bushel	Value of grain per acre in Rs 64.	Rates per Acre
7912. 3. 4.	5538 — 58	59420 — 6-4	25922 — 5-5	1-8-3	39265 — 10-6	7-1-5

II The Village consists of 6 equal Villages they are enjoyed as shown in the margin of the preceding page.
 The lands are undivided Poru is paid on the number of Villages equally & permanently.

III The Rang's Taluk has no ground to find fault with the boundaries of this Village which correspond to those in the Patta. The boundaries in the Account of Ft 246 differ to some extent with those of Ft 244. The holders of this Village explain that these boundaries are one & the same on the spot & that if any difference is found upon personal examination, they will guide by the one which may be selected by the zemindar for them. Hence the area of 57 Acre & 75 futs is confirmed.

Valuation

IV Wet lands depend upon one Tank of moderate size - It is in repair It is fed by a Jungle River & by the whole of the adjacent Agre Villages. The Tank is filled annually in full - Security of water is not felt much. The perau 16 Acre & 30 Acre of Wet are full water annually & 13 3/4 Acre of land as waste are partly cultivated & partly waste - It is full water in 3 or 4 years. The lands around are left waste from them being impregnated with salt. This is not true to its full extent. Some of the Wet lands are full water annually 20 times - No Pujah full water in the Village. Soil is good & not of an inferior quality. Harvest is good. No garden crops are raised. The Village is in pretty good state. Like the adjacent Agre Villages. The average income of the Village as first stated of the Mahanani is 65 Rupees per annum. This is quite false. The contiguous Agre Villages are Nangin, Serambur & Jinai Poru. The average value assessed of these Villages comes to 1-4-380 & 7-82 per Acre respectively. The average of these 3 Villages comes to 6 Rupees per acre. Perambur above average. Wet around is very low, is an insignificant Village. Very few wet lands are full water there. The holders of this Village say that the end of the Village may be placed on par with that of the contiguous Village. After weighing the probabilities & such I frame the valuation of the Village as follows.

Wet 30 Acre full water at 6 Rupees per acre 180 —
 Wet 6 Acre of an inferior quality at 3 Rupees per acre 18 —
 Wet 7 3/4 Acre Patta at 10 Rupees per acre 77 1/2 —
 Total 205-12-0
