Valuation

Wet lands depend upon three small tanks. They are fed by the waste water of the contiguous fields of
 - Seram and Kalliputti, Polesput & Dornitum. The tanks are filled annually from the rain water.
 - The Mahayanam and that of the waste water are long uncut water lands. They are filled at once if the
 - Tank is improved. Puzhal lands are of long waste from want of water. Wet lands are not cultivated 2nd time. Tank is not raised.
 - Tank is of a superior quality generally. No scarcity of water is felt. The village is in good state. There is no water in the
 - average assessment of the adjacent. The average assessment of the Mahayanam in which the village is situated is given in
 - the margin. Average profits of the village are 900 per annum. This is not true. No scarcity of water is felt. The soil is good.
 Most of the lands are cultivated annually. No more is required for a good village.

With reference to the fertility of soil &c. I frame the valuation of the village as follows:-
 Wet 20 Acres cultivated annually at 6 Rs per acre - 120 -
 Wet 10 Acres of 10 Rs per acre being long waste - 127 -
 Dry 10 Acres at 10 Rs per acre - 131 -
