No. Taken about the area or about the boundaries on the part of the Range Taluk. The boundaries are not entered in the main account. Statement corresponds to those in the government account of 1864. There is some difference in the boundaries given in the government account of 1864 & in the Booyoor Account of the same year. This is used by the Range Taluk & the government to be one & the same on this spot. Hence the boundaries are confirmed here & the 86 acres & 21 cents situated therein are registered here.

II It is presumed that this Village was usurped improperly by the Patimma permission as will be seen from the complaints received daily to this effect - but none claimed to this village - as the family of the Cyl Granter is extinct. Under these circumstances I recommend to confer the Village upon the Temple on 1/2 assessment under clause III Rule XVI - Copy of the Nirubam is placed with this for the information of the Reviewing Officers. The Range Taluk explicitly stated in writing that he has materials to show how the Patimma permission acquired this Village - This held as Tanna-Mary by the village.

Valuation.

III ----- Wet lands in this Village depend upon one tank of large size - as will be seen from the extent of the bed of the same given in the preceding side. The tank is not in thorough repair - though there are no breakers in the bund. The furrows of the Village covered 1 3/4 acres of wet as cultivated lands & 10 acres & 87 cents & 19 annas & 4 pints of dry as waste - & stated that the waste are of long uncultivated lands & that the Village was in ruined state about 20 years ago & that the lands are now being brought now under plough gradually.

This seems to be true to some extent from the evidence before me. The furrows again says, as the Range Taluk knew nothing about this Village, that the wet waste lands may be brought under plough as soon as the tank is improved. Some of the full tilled wet lands are full tilled annually 2 times - The average area thus full tilled 2 times annually is estimated to be 6 or 7 acres - Nanjoh & Periyakol lands are that of a very superior quality generally - The average income of this Village as per statement of the Range Taluk - is 80 Rupees per annum - The country near Ayer Villages are Panchal, Alankud & Periyakol, Kana pally. The average wet assessment of these villages is 5-8-3. 6-3-4 & 6-5-6 per acre respectively - The soil of this Village may be placed on par with that of the adjacent Ayer Villages - The consideration of the fertility of soil & I frame the valuation of the village as follows - Periyakol rates vary from 1-8-0 to 6-13-6 per acre -

Wet. 16 Acres full tilled at 6 1/4 Rupees per acre = 100 —  
 Wet. 8 Annas & 61 cents Waste, fit to be full tilled at 10 Rupees per acre = 8-10 —  
 Dry 19 Annas & 4 pints Waste at 4 Rupees per acre = 6-72-0 —
